Ok, I'm good with all of that, what I was after was that place in which the decode took place. For example, my RAMBO has the necessary logic to decode the PIA lines and normal address lines and select the proper bank. On the 130XE there is apparently a PAL with a "CO" part number on it to do the same. I was wondering if there was such an item in the XEGM.

>case then email me. Any alternatives or suggestions?

I suggest you make a case. When I bought my Black Box, I ordered it with a case. I paid an extra $30 for it as I recall. That's a lot for a case, but I thought to myself, it's just best if the PCB isn't laying out in the open. Well, was $30 ever too much as I came to find out. The 'case' was one of the cheapest peices of crap I've ever seen. The worst part wasn't even it's flimsyness, but rather the fact that the halves of the shell didn't even fit well together and around the BB's switches and shape. Make it out of wood if you have to. Just don't expend any great efforts trying to get a crappy case.

Cheers,

Jon

Yes, do let us know.

In point of fact, there are at least hundreds (I haven't counted how many
hundreds) of 8-bit files at the umich ftp site for the 800-series. NONE of
them are pirated files.

Message-ID: <5e3ckt$2kk$1@enyo.uwa.edu.au>
Source record: 75630

Has anyone got bruce-lee (datasoft) to work on xl-it 0.17???
It runs but you can't move bruce, he's just stuck in the bottom left
corner.
Is it a bug or just my copy corrupt?

Fantastic work markus! Gyruss kicks butt! the music is excellent!
For those that are interested I got superdos to work a couple of times
but now it doesn't, and mydos corrupts single density ATR images????
but atari dos 2.5 read and writes them just fine!
Oh and my bootsector load menu incorrectly identifies single density
ATR's as double density and when I try to change density is complains
it can't configure the drive?

Thanks!

> out. But then you'll just find another sucker to take you on. The
> person you've been damaging the most with your blatant stupidity is the
> atari 8bit community including yourself.

This is silly. It's 1997. You know, 400 mhz overclocked klamath
processors, 32-bit color depth, internet, fire wire, force feedback.

Isn't it time to let the 80s be the 80s and move into the next century?
There is no viable 8-bit retail market. Face it, 8bit Atari's are a hobby,
just like tube radios. Nobody's concerned about photocopying 15 year-old
magazines, why worry about software that hasn't been produced since then?

1660. FS: Atari Computer Goods! Even More Atari Stock! FREE Catalogs!

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-15 00:00:00 UTC
From: bensmith@teleport.com
Message-ID: <5e3vvuegs1@linda.teleport.com>
Source record: 75633
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got Monitors for your Atari 8 Bit like Commodore CM-141 "Like the Commodore 1802" And Disk Drives for the Atari 8 Bit like Stock 1050 and a 1050 Duplicator Drive for Backing Up Software. Plus I've bought out the Game Cartridge Gorf for the 400 & 800 & the Educational Math Game Cartridge Space Journey for any Classic 8 Bit Atari Plus I've cornered the Market on New Copies of Print Shop and some Print Shop related Items! That's Gorf, Space Journey & Print Shop All New Copies, All for the Atari 8 Bit! Plus a Good number of SSI and Avalon Hill/MicroComputer Games, and Many of them are Complete. Plus some Flight Simulator II from SubLOGIC including Scenery Disks all for the Classic Atari 8 Bit. For the Atari ST & newer Computers I've added to my HardWare Catalog Spectre GCR Mac Emulators, Indus (Future) GTS-100X Disk Drives, Panasonic MultiSync Monitor that does Double Duty for both ST Color and MonoChrome Monitors and the Cable/Hardware to your ST Computer. I've also added Software to my ST Catalogs & revised my prices. Titles such as Shrink Wrapped Brand New copies of Ultima V for those of you Ultima Collectors & for you who like Flight Simulators, theirs F-15 Strike Eagle, F-16 Combat Pilot, Falcon, Falcon extra Missions Disk, Fighter Bomber and Flight Simulator II. In Productivity Software, theirs Data Manager ST, Degas Elite, Easy Draw, MultiDesk, NeoDesk, Revolver & PageSTream. All for the ST.

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. At BSC's Web Page you can View, Capture and even DownLoad Atari Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Do You Have problems connecting with BSC's web page? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Please let me know if I can't attach files to your E-Mail. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Not Snail (Postal) Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports.

You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Page an area for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Home Page! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Page with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Page. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Finally, you can always ask me for a copy at URL:mailto:mcurrent@carleton.edu

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
```

developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection.

Software does not enter the Public Domain unless explicitly released to the PD *by the copyright owner*. If there is no copyright notice, software must be considered Freeware rather than in the Public Domain.

My article "Intellectual Property Protection for Computer Software" appeared in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of my more prominent sources:
- Atari Classics, published by Jim Hood and Bob Woolley
- New Atari User, published by Page 6 Publishing (Les and Sandy Ellingham)
- Historically Brewed, published by David A. Greelish

"Hi!" to Marek Tomczyk, who has supplied SO much information from Germany.

Remember, the success of this list is dependent on YOU, the reader, to
send me updates that correct errors that you find. If you use this
list, please do your part in keeping it useful for everyone!

This is incorrect. APE creates 100% correct ATR images. If your
missing 2 sectors its your emulators fault.

Steve

1663. Charles Kelley

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-15 00:00:00 UTC
From: busfanatic@hotmail.com
Message-ID: <855945103.5526@dejanews.com>
Source record: 75636

If anyone knows the whereabouts of a Charles Edward Kelley, Atari 8-bit computer enthusiast; please contact or have him contact his wife, Lisa at +1 423 396 3652. Lisa has the papers Chuck's been looking for for years. Chuck is a 40-year old white male with brown hair and is 5'11" tall. He may be using a false identity. He may talk about a Nevada Savings and Loan or PriMerit Bank, about being a card counter or a casino dealer, and about how Lisa and/or Patty Garcia messed up his life. He considers himself an anarcho-capitalist but last I knew he expressed some strains of right-wing thinking. He suddenly left his home in Duluth, MN in the fall of 1995 and mailed a postcard to Lisa from Tuscaloosa, AL in December of that year. There was a possible sighting in California 12/12/1996. One of his friends was a Craig Glossner of San Francisco. This is an urgent matter and it is believed Chuck will welcome this contact because he wants these papers really bad. They are about his suit against Primerit Bank. This is not intended as a hostile search. Thanks!

1664. Charles Edward Kelley

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-15 00:00:00 UTC
From: John Charles Wilson <busfanatic@hotmail.com>
Message-ID: <855778096.30246@dejanews.com>
Source record: 75637

If anyone out there knows the whereabouts of a Charles Edward Kelley.
there is an urgent message for him: Your wife, Lisa Varnell Kelley, has
the papers you've been looking for all these years. Please call her at
+1 423 396 3652 ASAP!

Charles is an Atari 8-bit user and fanatic. He formerly belonged to
the SPACE club in Saint Paul, MN. He travels a lot and is a computer
hacker. Left his last known address of Duluth, MN in the fall of 1995.
He is a white male, 5'11" tall with brown hair. He usually hitchhikes
or goes Amtrak or public transit. May talk about a lawsuit against
PriMerit Bank of Nevada and an A.F. Babbaro. May seem crazy but he's not.
Claims one Patty Garcia is after him. Claims to have Chronic Fatigue
Syndrome and a connective tissue disorder.

1665. WTB: Joysticks & Various CARTS

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-15 00:00:00 UTC
From: rhkramer@fast.net
Message-ID: <5e4qkb$5c6@news1.fast.net>
Source record: 75638

Hello. I'm looking for a good used pair of joysticks for the 800xl. Any offers? Also, I'm looking for these carts: Frogger, Flight Simulator][, and Qix at a decent price. Please email all offers to rhkramer@fast.net; thanks! Oh, I almost forgot. I'm also looking for Ballblazer. Thanks again!

Just changing the file extention to .ATR won't help; you'd need to
convert the file: The file is, most likely, in .XFD format so you'd
need to convert it to the .ATR format. If this doesn't help, sorry.

>The Atari's OS is built-in,so there's no point to a BIOS.
>

The 8-bit's OS ROM is quite different from the BIOS of an ST or an IBM PC,
but the PC and the 8-bit, and early ST models, all have to load their DOS
from a disk. Until recent years, a real IBM PC could also run Basic if no
disk drive were present.
An original 400 or 800 with no cartridge, disk, or cassette is hardly any
more useful than a PC in similar condition, so I see little point in
saying the 8-bit has an OS, not a BIOS. (Of course, the PC doesn't have
cartridges unless it's a PCjr.)
(ps: anybody got an original IBM PC cassette cable, or pinouts for it?).

Uhh... Rich. This is in no way to support having pirate sites for the 8bit, but have you checked out the 8bit section at umich recently? The count of "hundreds" would be zero to maybe, MAYBE one. I have done a great deal of searching there recently, now that I have dug my 800xl and MIO out... and while there is some good stuff there, there definitely is not a lot.

I agree the Black Box and a hard drive are now almost requirements to keep your eight bit up to date. I also have in addition to that the Floppy Board an add-on to the Black Box which lets you use 1.44m floppy drives on your eight bit.
Computer Software Services has an incredible line of products. I encourage everyone to support them.

Wierd that SuperDOS actually worked and then didn't? I've never got it
to run. As for MyDOS corrupting ATR's, I have the same problem with it
on my 130XE and the SIO2PC cable. Any time I format an image (S/E/D?)
and save it on the hard drive, after re-loading it the image is
apparently 65535 sectors??? This only seems to happen using the
original SIO2PC software, so I have to use APE to re-copy whatever I
was working on.

Just a bit of trivia...

Steve.

I dunno about 50%. It is a little faster. I timed the transfer of a single density disk-
US speed- 30 seconds
APE+ - 22 seconds

Of course this is on my 286 PC, so results will vary from PC-PC.
APE+ speed is great when it works, but SpartaDOS tends to hang around and wait for a few seconds after reading 10-20 sectors. SuperDOS 2.9 won't load the SDUP.SYS except after resetting a few times, and SuperDOS 5.1 seems to lose the drive status after loading.
Don't get me wrong, APE is a great program! But, I'm sticking with the original SIO2PC software, cause I've never had any problems with it like I've had with APE. And I like having a "RAM-disk" to work with, which APE doesn't support. It writes directly to the image instead of an image in RAM- so if I bugger something up it stays that way! Not so with the original program, which can use all available RAM to make an image up to about 500k! (or more). Now, that's a RAM-DISK!
Sorry, I was a bit off the thread there. Just my 2c worth :)

```
The Swedish Atari Club (SAK) 970104
and NoCrew proudly present...

-------------------------------------------
T H E N O R D I C A T A R I S H O W '97
-------------------------------------------
```

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we are arrange the show for the third straight year we hope to fulfill everyone's expectations and that this will result in the best possible atmosphere. We've gotten a certain amount of criticism, both positive and negative, from those who have attended the shows in '95 and '96. We've taken heed of the suggestions made and we're once again off and running!

- WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday, June 15. This is the weekend following the beginning of the summer school holidays as well as the weekend prior to the Swedish Midsummer celebrations. We'll open at 1 p.m. on the Friday and close at 6 p.m. on the Sunday.

The show will take place in Gothenburg, just has it has in previous years. The exact venue has not yet been established. We're still looking for the cheapest location. The likeliest possibility is Kortedala gymnasium, where it was held last year or some other venue, nearby.

- WHAT ACTIVITIES WILL BE HELD?

* There will be an Exhibition Hall will dealers, distributors, ShareWare programmers and a host of other interesting personalities. The usual meeting place for all those not wanting to "hack". This is also where the Swedish Atari Club will be found supplying information, sale of PD-disks, the club magazine's TT, the BBS, etc. We'll also have an area reserved for a swap meet where you can buy, swap or sell single copies of Atari related material and a "soldering corner" for those of you wishing simple repairs done.

* A "Hacker Hall" where demo and other programmers can gather for competitions and swap demos and all kinds of code. NoCrew is the Swedish demo group who will see to it that everybody takes part and enjoys themselves. Those of you hungry after rewards in the form of

prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

* Seminars with a number of well-informed lecturers. Last years seminars were very much appreciated, something of which we naturally have taken notice. The seminars will cover a variety of subjects (i.e. MIDI ercording/editing, DTP, hardware, programming) where the above mentioned "well-informed lecturers" will demonstrate his subject directly on a computer in order to provide the audience with practical examples. We'll also hold the seminars on different days and at varying times so that you won't have to miss the chance if you don't attend on a particular day.

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated contest last year), hard disk throwing (this year we WILL succeed!), network games, juggling, etc. Everything depends on our finding volunteers to act as game leaders and judges. There will be prizes for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips, etc. We may be able to arrange quantity discounts at the local pizzeria as well as other bonuses.

- WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 100:- (about UKP 8.50)
* Single Entry ..... SEK 50:-

These prices include full access to all the activities being held during NAS97.

- WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

- HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (E-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an E-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your E-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet..se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is: +46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everyting there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile 'phone on +46 70-669 52 35.

WE'RE LOOKING FORWARD TO SEEING YOU AT THE NORDIC ATARI SHOW 1997!

HW>> the only thing you have to do is to insert a second pokey and to do
HW>> some wiring then you have STEREO on your XL and a lot of programs

HW>As fas as I remember pokey has a sound output pin for every
HW>sound channel. Usually these pins are connected to each other,

HW>You have to connect your stereo amplifyer directly to the specific
HW>pins of POKEY and have brilliant stereo sound.

Yes, thats true, but that you only have to channels on the right and two
channels on the left. With the modification I suggested you have four
channels on the left and four channels on the right side.

HW>P.S. Where do you want to insert the second pokey????

You have to install it piggybacking on your original pokey, but beware,
not every pin has to be connected. If someone is interested I can post
instructions how to change your ATARI to STEREO.

Tschuess

1677. Atari800-0.6.1 Now Available

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-15 00:00:00 UTC
From: "David J. Firth" <david@signus.demon.co.uk>
Message-ID: <3JeKmFAg6dBzEwq9@signus.demon.co.uk>
Source record: 75650
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

```
Changes in 0.6.1
----------------

o FPS and SIO Monitor are no longer compile time configuration options.
Enabled by "-fps" or "-sio" command line option or via an XVIEW
pulldown menu.
o Motif fileselector retains state from one invocation to the next.
o Configuration program detects if longwords need to be aligned.
o Modification to X11 Paddle Emulation.
o Removed hardcoded paths in MOTIF code.
o Various fixes for curses mode.
o Correction to Colours in Antic Modes 4&5 causing Incorrect colours
in Rally Speedway, Galactic Chase and Mr. DO)
o Disabled DiskChange KEY (F8) in X11 version.
o Added "-nobasic" command line parameter.
o Added "-osa_rom", "-osb_rom", "-xlxe_rom", "-5200_rom" and
"-basic_rom".

These command line options are used to specify the location of
various system ROMs on mis-configured systems or binary distributions.

The latest version can be downloaded from my web page:-

> APE+ - 22 seconds

Before there is a small war over this, US double drivers use a
baud rate divisor of 0A which falls on the curve at about
52.1kbps. Over a very long sequential read, using a specially
formatted disk (skewed) you will get a result as above. However,
outside that very specific situation, the latency time of the real
floppy disk seek/spin/verify times usually push it to well over 50% faster.

Transfer rates don't boil down to pure baud rate comparisons.

> Of course this is on my 286 PC, so results will vary from PC-PC.
> APE+ speed is great when it works, but SpartaDOS tends to hang around
> and wait for a few seconds after reading 10-20 sectors.

If you use Spartados 3.2g this wont happen normally. If it does you
should turn off the command monitor and any other speed eaters to
allow it to run faster on your 286.

> SuperDOS 2.9

Hmmm...that's weird....what version of SpartaDOS are you using? Steve
says that versions prior to 3.2g might not work too reliably in APE+
mode.

>won't load the SDUP.SYS except after resetting a few times, and
>SuperDOS 5.1 seems to lose the drive status after loading.

It could be soemting in the Ape configuration or possibly the Ape+
DOS patch that you're using (there's one by Yogi and a more recent one
by Steve Tucker), I've had different results with each. Also, I've
found that on my particular system, even though I have the 1 chip
SIO2PC cable, APE works much more reliably when you configure it to
use the 2-chip version......go figure.....

>Don't get me wrong, APE is a great program! But, I'm sticking with the
>original SIO2PC software, cause I've never had any problems with it
>like I've had with APE. And I like having a "RAM-disk" to work with,
>which APE doesn't support. It writes directly to the image instead of
>an image in RAM- so if I bugger something up it stays that way! Not so

You mean you can't create a PC Ramdisk and create an .ATR file on that
disk for Ape to input/output to?

The Rainbow demo (Mac or Win95) will run single density ATRs (92176 bytes)
but not larger ones.

I'll have to try this out. Originally I used the 2-chip version, but
sold that one, and built the single chip version. Hmmm.

Try increasing the safty margin if you have 1.12. If you configure
it for 2 chip, it adds 2ms of extra latency to allow the manual
tristate to function properly. Adding it via the safty
margin setting would be more reliable now :)

1687. 6502 Emulation

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-16 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <5e7gph$i3v@freenet-news.carleton.ca>
Source record: 75660
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

I'm writing my own 6502 emulator as a rad object for Delphi/C++ Builder,
but I have some problems w/ interrupts and flags. Hopefully
some of you know what these do? I tried buying a 6502/65816 book
from borders but it is out of print.

There seems to be some confusion about how the BRK instruction
actually functions. I discovered PHP always sets the
B flag, ok, but I have 3 posts about how BRK twiddles the flags,
all different.

When the status register is pushed, should B be set in the
PUSHED copy? Should I be set? One paper I have says I is never
set for BRK, just for an external hardware interrupt, an nmi?

Besides BRK what other kinds of interrupts does the 6502
service? Obviously it seems to have an external interrupt line? There
also seems to be seperate talk about nmi's, what causes these? Is there
a line for maskable and non maskable interrupts? Sorry Ive never
written any major programs in 6502.

If the 6507 has no interrupt lines, then only a BRK instruction
can cause an interrupt on it?

Thanks :)

Steve

About your ATR8000 not booting... While I'm not an expert on the ins and outs,
I've been using mine since 1981.
My thoughts: Do the drive lights come on for a moment, and the drives spin up
when the ATR is turned on?
Are the drive lights always on?
Are there any SIO drives?
Has the ATR ever worked right?
Is the ATR configured for CP/M terminal instead if Atari controller?

We can work from here.

There was a third program called JVIEW. APACVIEW decodes a GIF into
.R, .G., and .B files, which you would then view with COLRVIEW; JVIEW
does the decoding and viewing in a single program. It uses the RAM under
the OS, so you can't run it on an 800 or on Spartados versions 2 or 3.

Sounds like something a certain unnamed "junk peddler" used to do years ago. He would take a program, change a few cosmetics, and make it run off a copy-protected disk. But he would also add a little code that would format all your drives if it didn't see the protection. He called it his "extra protection", we just called another one of his scams.

Steven J. Tucker wrote:

I'm writing my own 6502 emulator as a rad object for Delphi/C++ Builder,
but I have some problems w/ interrupts and flags.

..Interrupts on the 6502

The 6502 had 3 methods of dealing with the interrupt feature. Two were
hardware driven, RESET, NMI, IRQ, and one driven by software, the BRK
instruction.

Basically all interrupt services were to support hardware devices or
programming. The RES, which was a pin on the device itself was used as a
RESET start function, like when a computer is first turned on. When this
pin is driven LOW the CPU does a direct jump to address contained in
FFFC-FFFD. For this reason most designers of 6502 systems placed their
ROM's in the last 8K of memory.

NMI, non-maskable interrupt is based on a hardware activity that must be
answered, used by devices to demand access to the buss or have
instructions porcessed. When this pin went LOW the PC and Status
Register are copied into 3 seccessive locations set by the stack pointer
(somewhere on page 1), then the PC is loaded from the address found at
FFFA-FFFB where the routine must exist to handle the interrupt.
An example of NMI grade interrupts is tape i/o which isn't DMA like but
has to be servied or the data will be lost.

IRQ, interrupt request is like NMI but maskable. If the I bit of the
status register (bit 2) is 'SET' the request is ignored. Note that NMI
cannot be ignored, thus called NON-MASKABLE. The vector to service this
interrupt is at FFFE-FFFF. Also while the interrupt is being serviced
the I bit is set by the CPU so the interrupt isn't interrupted. An IRQ
style interrupt is like a keypress, if it isn't answered for a few
hundred clock cycles it's not likly to be a disaster.

These hardware services are checked on a cycle by cycle basis, so
emulating these can be difficult.

The BRK insturction, forced break works like the above - except you
assert it with a command from assembly. Usally you use this in program
debugging. I suppose there are other uses as well. It's vector is
FFFE-FFFF.

Ah you say that's the same vector as IRQ, you're right...For this reason
your code must make one more test when the interrupt comes in. The BREAK
COMMAND bit of the status register is set when it's this instruction

that forces the interrupt. You test for the condition this way:

```
PLA ; get the status register into accumulator.
PHA ; but also save it on the stack.
AND #$10 ; bit mask to see bit '4' only, the BRK bit.
BNE BRKP ; on the BRK branch to the BRKP service routine.
```

Well I hope that helps.

AB.

From: Richard Forester <forester@blarg.net>
Message-ID: <01bc1c60$c46012c0$369072ce@snowball_2>
Source record: 75674

I was wondering if anyone could share their opinion with me on which is the more logical solution: building an Xformer cable or SIO2PC cable to transfer stuff from my 800 to my PC.

I have two things that I mainly want to do:

1. Export Atari files from my Atari to my PC. I have Atari format text files that I would like to copy to a DOS file.

2. Copy atr and xfd images from my PC to my Atari. So I can download images off the internet and create Atari disks with them for use on my 800.

Does either cable/process lend itself better to what I am trying to do?

Thanks,
Richard

Source record: 75676

You should consider building the APE cable (derived from, but improved from the SIO2PC cable).

Then you could download ATR files to your PC. And store the ATR files on your PC, giving you a huge Atari HD. Then use APE software on your PC to make the Atari see your PC HD as a source of all those ATR images. Each image file becomes one floppy disk when served up by the APE software to your Atari. You need the APE cable to do this.

Check out the APE homepage: http://www.nacs.net/~classics/

have fun !!!

the original boxes and have all manuals, maps, and etc.
Best offer for all 7 titles.

ZORK
ZORK II
ZORK TRILOGY
BEYOND ZORK
A MIND FOREVER VOYAGING
WISHBRINGER
SPELLBREAKER

For the Atari 8-bit.

2 OSS BASIC XL CARTRIDGES and 2 MANUALS
One cart is Black with Yellow Label. Version 1.03
One cart is Orange with Yellow Label. Version 1.02
One manual is the paperback Reference Manual. 135 pages.
One manual is loose pages in a hardback 3clip yellow notebook which
has the 135 page Reference Manual. Plus the 176 page "30 Days to
Understanding Basic XL"
Also included is an Original OSS Basic XE extension disk.
Best offer.

PQ The Party Quiz Game by Suncom.
4 push button controllers, Interface Module, Original Manual and
Software. Disk software includes...
Program Disk and Question Disk on Flippies. Has both Atari 8-bit and
Commodore 64 versions. And these extra Question disks...
Education Edition 1
Entertainment Edition
General Edition 2
General Edition 3
This should work on any Atari 8-bit. Was tested on a 130XE and
everything works fine and is in very good condition.
Best offer.

ATARI SPEED READING
"Develop Advanced Speed and Comprehension Skills and Discover Your
Reading Potential"

Contains all 5 original cassettes and 209 page workbook in a large
black, clip notebook type case.
Workbook has a few pages that were answered in a light pencil. 95% of
the workbook has not been written in. This item is in excellent condition
for its age. The copyright is 1981. Model CX4126
Best offer on this complete package.

THORN EMI VIDEO Software
KICKBACK Cartridge. Comes in original black case with instructions.
RIVER RESCUE Cartridge. Comes in original black case with instructions.
SUBMARINE COMMANDER Cartridge. No case or instructions.
THORN EMI COMPUTE 4 & REVERSI Cassette. Original Case and Instructions.
OWARI & BULL And COW Cassette. Original Case and Instructions.
Best offer on these 3 carts and 2 cassettes.

ATARI CASSETTES
No paper boxes with these programs.
All are original Atari Cassettes in plastic cases.
AN INVITATION TO PROGRAMMING
WRITING PROGRAMS ONE
WRITING PROGRAMS TWO
INTRODUCTION TO SOUND
INTRODUCTION TO GRAPHICS
Two original Atari Manuals that cover the Writing Programs 1&2
and Introduction to Sound and Graphics, cassettes.
MAILING LIST and Original Atari Manual.
ENERGY CZAR no manual.
Best offer on these 7 cassettes.

E-mail any offers and or questions to...

The 0 key on the numeric keypad is the fire button. (I'm not sure why
you'd want to use the keyboard tho, considering Darek doesn't
apparently know the meaning of keyboard interrupts...)

1707. need manuals- starbowl football/Infiltrator

4 tips concerning Xformer:

1) Use the shift F10 key to set the emulation to straight 800 mode
that runs nearly everything.

2) The keypad's 0 is the fire key, ain't it?

3) RTFM

4) Get Markus Gietzen's XL-it, which is better.

It seems that Bruce Lee doesn't work with any emulator. Not sure why, it must do something weird when it initializes.

Listen up KID!

I NEVER misquoted you deliberately or otherwise! As for your cheap
shots, I DON'T CARE!
As for you justification, it was a highlight of the Atari 8bits, that
before you hit town, there weren't "Warez d00d" sites such as yours.

Btw, I've been saying all along that piracy is wrong! question is if you
still don't realize that then you've reached an all new low. The final
truth of the matter is that you've buried yourself in bull. Now crawl
back under the rock you came from as it's clear that you're not needed in
the 8bit community and despit the claims of your 3 supporters, you're not
wanted either.

Umm, I guess you better not release anything then. This 'Atari Piracy' is the
most assanine debate I've ever heard. The Atari8 series is *dead* - period.
If you support it, it should be because of it being an act of love for a
hobby. You can't make a living off of the Atari8, simple as that. If you
do make some money, then great, all the better - but it shouldn't be
expected. No one should be expecting financial payback for supporting a
machine that has long passed into the halls of history. It's time has come
and gone. Yogi's archive simply preserves a bit of the past that some of us
cling to, that would otherwise be lost...

Source record: 75688

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 02/14/97

NOTE: There are currently 1375 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.00 Atariwriter
$ 5.00 Basic -- for use with the Atari 400 and 800
$10.00 Delta Drawing (Spinnaker)
$ 4.00 Missile Command
$ 4.00 Space Invaders
$ 5.00 Star Raiders

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers -- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers (14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3 (100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog (32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

This is a complete system, except for RF switchbox and RCA cable.

$39.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$32.00

*****

LOT #3

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 5.00

*****

LOT #4

ATARI 820 PRINTER, with one (1) roll of paper and built-in power cord.

This item has not been tested.

$14.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$19.00

*****

To reserve any item(s) listed here, please contact me (please read
the SALES CONDITIONS section first). Thank you!

hi... i have made some screen-shots with my amiga 1200 from my
demos... ;-)

i have used the xl-emulator atari800 v0.6.0 and luckily
the amiga-os is a multitasking os so i can load any screen-grabber
and make screen-shots by pressing some key-combinations... :)

but there must be other emulators/screen-grabbers for ms-dos, or?

the atari st version of xformer can grab by itself xl-screen-shots
and save them to harddisk...

: >
: >uh,the Atari doesn't have a BIOS.You're thinking of the ST.
: >The Atari's OS is built-in,so there's no point to a BIOS.
: >

: The 8-bit's OS ROM is quite different from the BIOS of an ST or an IBM PC,
: but the PC and the 8-bit, and early ST models, all have to load their DOS
: from a disk. Until recent years, a real IBM PC could also run Basic if no
: disk drive were present.

DOS can also be contained in a cartridge or loaded from the drive
itself.But I digress...

: An original 400 or 800 with no cartridge, disk, or cassette is hardly any
: more useful than a PC in similar condition, so I see little point in
: saying the 8-bit has an OS, not a BIOS. (Of course, the PC doesn't have
: cartridges unless it's a PCjr.)

uh,I don't see your point.The OS is built in,or else tape and cartridge
games wouldn't work.

The BIOS just exists so that MS-DOS doesn't have to be customized for
every type of PC.The handlers that come with the OS (be it MS-DOS or CP/M
or UNIX) just translate the OS's call to one for the BIOS.
The BIOS routines are each accessed in a totaly different manner,the OS's
handlers in a generic manner.
The BIOS is just barely useful.The RS232 routine is close to useless.
(you actually need to be reading from the serial port to get a byte,where
as Atari's R: device is always receiving data even when the programme
is doing something else)
The BIOS only suports ploting a single pixel on the screen.
(where as the S: device on the Atari suports line draws and fills)
When programmes bypassed the BIOS,it meant that they wouldn't work with
newer graphics cards like the CGA and EGA (which are incompatible with
each other).

Since the Atari OS is built-in,there's no need for such a translation
machanism since the OS will have with it the proper handlers for that
computer.

: (ps: anybody got an original IBM PC cassette cable, or pinouts for it?).

This can only be access through the BIOS.So you can't convert your BASIC tape games into disk files with:

```
LOAD "TAPE:"
SAVE "GAME.BAS"
```

What is this? Blasting freeware? No wonder these emulator guys consider
stopping their continual upgrading of these systems...

Mabe you havent tried 3.60? Xformer has some great featues esp. using
exe's straight without having to put them into a disk image.

Either way, support them, don't blast them.

1721. Yogi's hackerz site

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-17 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us
Message-ID: <5e9tb8$616@login.freenet.columbus.oh.us>
Source record: 75694

I'm having a bit of trouble accessing Yogi's new Hackerz.com FTP site.
Of course I can't use the boot disk games since they are in ATR format.So I
went to the binary file games but the directories seemed to be empty.
After accessing other directories I realized that I can't access any
directory with spaces in the filename.

uh,so what do I do?
And does anyone know where I can HTTP/FTP/Gopher a programme to convert
ATR files to a disk?

Hallo !

I want to upload some files to UMich archive now.
But I cant get a connection, even when I tried multi.
Then I tried to upload to the mirror sever in Stuttgart - but access
denied.
Are there any other possibilities ?

Thanx, Matt

This is the same code published in Rodnay Zaks's book "Programming the 6502",
which struck me as incorrect.
Since this code will be in an interrupt service routine, don't you
have to save at least the A register on the stack to preserve the value the
interrupted program had in it, thus making the P register value on the stack
inaccessible to PLx instructions?
Zaks says in the description of the BRK instruction that "the value of
P stored on the stack has the B flag set to 1, to differentiate a BRQ from an
IRQ." However, it seems much more logical for the processor to set the break
bit in the P register *after* having pushed the original P register onto the
stack. That way the bit can be tested with a PHP/PLA/... sequence sometime
after the previous value of A has been safely tucked away on the stack. Also,
on RTI, the break bit will be automagically set back to 0 when the P register
is restored.

> set for BRK, just for an external hardware interrupt, an nmi?

When a BRK occurs:

1. I is SET.
2. The program counter has 2 added to it, and this address is pushed to the
stack.
3. The P register is pushed onto the stack with the B bit SET.
4. The new PC is taken from $FFFE, and $FFFF.

When an IRQ occurs:

1. I set SET.
2. The program counter is pushed onto the stack.
3. The P register is pushed onto the stack with the B bit CLEAR.
4. The new PC is taken from $FFFE, and $FFFF.

As for NMIs, not sure. Just keep the B bit set *at*all*times*. It is only
clear on the *image* of the P register pushed onto the stack after a non-BRK
IRQ.

Note also that BRK can occur with I set -- it is an internal thing.

> Besides BRK what other kinds of interrupts does the 6502
> service? Obviously it seems to have an external interrupt line? There
> also seems to be seperate talk about nmi's, what causes these? Is there
> a line for maskable and non maskable interrupts? Sorry Ive never
> written any major programs in 6502.

There is an IRQ line. When a device wants an IRQ it asserts this line. The 6502
ignores it if the I flag is set. Don't let the hardware check the I flag! It is
the 6502's job to ignore or not ignore interrupt requests. (I made this
mistake once! It seemed so sensible the other way :-)

NMIs can never be masked. I am not sure what happens when an NMI occurs before the previous one has been serviced. Presumably you just have to service them very quickly :-)

> If the 6507 has no interrupt lines, then only a BRK instruction
> can cause an interrupt on it?

Don't know about this :-)

Wow you're right, I had forgotten about saving the 'A' register however I didn't use the Rodney Zaks book but the Lawerence Leventhal guide on the 6502, looks like plagerisum was rampent in that time. After reading your post I checked out Mapping the 64, and Anatomy of the C64 which disassembles the ROMS. Their IRQ/BRK code reads:

```
PHA
TXA
PHA
TXY
PHA
TSX
LDA $0104,X
AND #$10
BEQ $FF58 - break routine.
```

Not sure if this answers your question but I believe you need two things, the Atari was not simply a 6502 based microcomputer it had various features that you'll need documentation to exploit fully. First a good book on 6502 Assembly Language, titles you may consider include:

Programming the 6502 - Rodney Zaks
6502 Assembly Language Programming - Lance Leventhal

You'll also need some information about the Atari 8 bit hardware/software resources and memory map. Titles I suggest include:

De Re Atari - Chris Crawford
Mapping the Atari - Ian Chadwick
Inside Atari DOS - Bill Atkinson
Atari Technical Reference Notes - Atari Corporation

A good summary book detailing both aforementioned areas was:

Assembly Language Programming of Atari Computers - Mark Chasin, Byte Books.

A good library may have some or all of these titles. Other posters may have their own additions/deletions.

AB.

Doc,
Yes, I know what Sapphire meant. I maintain that the IDE or SCSI
version would work like any ither hard drive via SOP2PC or APE. The
Parallel version might be a different story, nut hoone here seems to
have tried it yet. I will once I get my 8-bit system working again. I
have to repair my XF551 and replace a couple of SIO cables.
I really hope this version does work. It seems pretty quick for
regular MS-DOS and Win 3.1 access. I have to work more with it under
Win95.

Chris,
I don't know about that. Just about everything I've tried to run
seems to work. I've run games, BASIC XL programs, SpartaDOS and other
stuff with and w/o sound, joystick. I haven't tried the modem yet. What
version are you using? Try 3.60. It's FREE for the download from
www.emulators.com. Be sure to locate SpartaDOS 3.3. This DOs seems ro
run most stuff so far. It's the only DOS that I've been able to get the
BASIC XL runtime program to run under. All in all, it seems pretty good
to me. However, I'm still waiting for the XFormer 96!

Good question. I haven't been able to get Bruce Lee to work with XL-IT or APE. I've tried APE with the translator disk, which gets me a little further, but eventually the screen graphics get screwy. Come to think of it, the copy I had of Bruce Lee back in the mid 80's would get kind of screwy every now and then too. Maybe the version from Yogi's has a bug.

From newest Computer Shopper...
quote....
by John C. Dvorak

Originally published in the March 1997 issue

Atari's story began in 1972 when Nolan Bushnell shipped Pong, the very first commercial video game. Bushnell originally was going to name the company that would ship Pong "Syzygy"-- a metaphysical term for an unknown magical energy--but he quickly opted instead for "Atari," a word taken from the terminology for the Japanese strategy game GO.

Atari soon became the video-game kingpin and grew large enough to be sold in 1976 to Warner Communications for $26 million. Sales soared as Atari spearheaded the home-game market in 1977 with the Atari Video Computer System, later dubbed the 2600. A year later, Atari rolled out two excellent computers--the 6502-based 400 and the 800--that competed head-on with the Apple II.

The Roarin' '80s

Things looked good in the early 1980s. The computer business seemed secure, with Atari among the key players. The XL machines (the 600XL and 1200XL) were positioned for success. As the less expensive VIC-20 and Commodore 64 machines put price pressure on the Atari line, however, the IBM PC changed the direction of the market. Atari hoped to counter the low-ballers at Commodore with the 65XE and 130XE, but the test marketing failed.

Then came the bad numbers. Atari managed to lose nearly $500 million in 1983, triggering the following year's game-market collapse. The company scrapped aggressive plans for the 1400XL and 1450XLD, and left something called the "Atari phone" unfinished on the drawing boards. The rumored IBM-compatible portable, which could have placed the company in the same league as Compaq, also died on the vine. A 1200XL portable was scheduled to be rolled out in January 1984, but it too was put on hold.

Talk came of a deal between Atari and Bushnell's new company, Androbot. Nothing came of the deal; Atari continued to bleed money. On July 10, 1984 came the announcement that Atari would be sold to Jack Tramiel for no cash down and a promissory note.

A New Era

Over the next year the company was reorganized, and the rumors of Tramiel's real plans surfaced: He was going to build a new computer architecture that would be similar to the Macintosh. Industry observers referred to it as the Jackintosh. Eventually, it was called the Atari ST (where the ST stands for

16/32, which refers to the data bus and address bus of the chip). It was powered by the Motorola 68000 and ran the GEM operating system from DRI. The STs shipped in 1985, about six months after they were officially announced.

The rarest system was the Atari 260, which simply did not have enough memory to do anything. The 560 became the first serious machine, followed by the 1040 ST. 1986 was arguably the "Year of the Atari ST." There were flourishing Atari magazines, Atari user groups everywhere, and Atari-fests of all sorts. The company was earning millions. By the end of 1986 Atari was touting the upcoming Mega machine (which shipped in '87) and talking about its TT line of workstations, including the 2080 and 4160STF. But for ST users, the plans for the "Mega" machine marked the end of an era--at least symbolically.

By 1987, things were still going well, but the company was losing focus. Talk was that Atari was going into the PC business. In an odd move, the company bought the Federated Electronic Stores and promptly sued the sellers. Atari would find itself often in court trying to make money using the legal system rather than using its own R&D. It eventually closed the stores.

Blue Period

From this period until 1989, when the palmtop Portfolio was introduced, it was apparent that the company had begun to coast. It was attracted to the game market again--in response to Nintendo's emergence--and introduced the Lynx, an outstanding little handheld game machine.

Along the way it sued Nintendo over some perceived violation. In 1990 the company took a weak shot at the PC-compatible market with a machine introduced in the UK, called the ABC-386SX/40. It also released the 68030-based TT030 Workstation. Interest in these machines was lagging, and the company continued to milk the ST. In September of 1992 Atari took its last shot by showing a multimedia machine called the Falcon. Two weeks later the company shut down R&D and reported again that it was losing money.

At the end of 1993, Atari introduced the 64-bit Jaguar into a game market tinged with confusion. Worse, the company did little to promote the game machine to the very kids who would have to get their parents to buy it. The company generally did not have much faith in advertising, but you could also argue that Atari had very little money to spend on advertising. High hopes counted on Wal-mart's agreement to carry Jaguar in its stores during the 1995 Christmas season. But scant sales resulted in truckloads of returned merchandise, which virtually sealed Atari's fate. Through a slew of infomercials, the company made a last-ditch effort to unload its inventory.

The Merger

On July 30, 1996, Atari Corp. merged with JTS Corp.--a new disk drive company. JTS found some tax credits in its "merge" with Atari, plus an easy

way to become a public company. Most of the employees were dismissed, and there is no evidence of JTS' commitment to continue using the Atari brand name.

Ex-employee Don Thomas posted a long, mournful note on the Internet. It reads:

"All that really remains of the Atari namesake is a Santa Clara warehouse full of unsold Jaguar and Lynx products...Now that JTS has 'absorbed' Atari, it really doesn't know what to do with the bulk of machines Atari hoped to sell. It's difficult to liquidate them. Even at liquidation prices, consumers expect a minimal level of support, which JTS has no means to offer. The hundreds of calls the company receives from consumers who succeed in tracking it down each week are answered to the best ability of one person."

Nolan Bushnell, among others, is making some effort to buy back the Atari name. And if you search the Web, you'll find a large, active contingent of Atari computer hobbyists and collectors still swapping patches and fixes for the machines.

I spoke with Don Thomas about this situation, and what baffles him most is the lack of coverage of this story. No one, particularly the press, seems concerned by the outcome of all this. It's amazing how a company that was a pioneer and a major industry player--even a force to be reckoned with in 1986--could fall so easily into the abyss within a decade. And even now, with Atari truly gone, nobody really seems to care. I suppose the song of the consumer is Janet Jackson's "What Have You Done for me Lately?"

That's because there is also a German (so to say;-) word "freak"
that you can compare to "fan" or "enthusiast".
It has nothing to do with the English word "freak". Altough most
Germans don't know the difference.

As Dutch and German are very similar it's probably the same for
them.

Bye,
Markus

The closest translation for "freak" in the context of computers is
probably "nerd" as non-techie Germans tend use the term disparagingly,
and "freaks" tend to see it otherwise...

The code wasn't in the manual. You had to call some kind of number to get it. I didn't bother with the number, I just went looking through the file with Disk Wizard II. The code is MIDNIGHT SUN

Longer answer: will not work with a color PAL TV or monitor. With most monochrome monitors you should be OK. With most B&W TVs with more or less continuously adjustable dials you should be able to get an image. The frequencies for channels and for their associated sound are different, so with a TV you won't get sound, and you may have to do some fiddling to get an image. Some monitors and TVs may not like being driven at 60hz instead of 50hz. When I lived in Germany, I had no trouble running NTSC stuff with a monochrome monitor.

On 17 Feb 1997 22:24:06 GMT, John Gaiger <john.gaiger@dial.pipex.com> wrote:
>Has anyone got any information of Atari history?
>Like dates that models were introduced and any info on general Atari
>history

Here's a short timeline. Some of the dates may be slightly off.

1972 -- Nolan Bushnell founds Atari, produces Pong arcade machine.
1976 -- Bushnell sells Atari to Warner.
1977 -- Atari produces the "Video Computer System" (or VCS, also known as
the 2600)
1979 -- 400 and 800 computers are produced.
1982 -- Atari produces the 1200XL, a machine plagued with problems.
The 5200 game system is also released.
1983 -- 600XL and 800XL produced, these fixed problems with the 1200XL.
1400XL and 1450XLD also produced, but never really released.
1984 -- Videogame market crashes, Atari suffers record losses, Warner
sells Videogame and computer division to Jack Tramiel, but keeps
the arcade division. 5200 is discontinued. Atari shows the 7800
game system, but shelves it in light of the crash.
1985 -- Atari releases the 65XE and 130XE, and the 520ST (and 260ST in Europe)
also showed a 130ST, but never released it.
1986 -- 1040ST released.
1987 -- STfm released, XE game system, a repackaged XE with
light gun, and pastel buttons, also repackages the 2600 as the 2600
Jr. and finally releases the 7800.
1989 -- The Lynx, aquired from Epyx, is released. 8-bit discontinued?
1990 -- The STe is released.
1991 -- TT is released
1992 -- The Falcon is released.
1993 -- The Jaguar is released in certain markets.
1994 -- Jaguar is shipped nationwide, computer line is dumped.
1996 -- Tramiels sell Atari to JTS, Time-Warner sells arcade division to
Williams. Pretty much the end of Atari.

Yup. But you could change the code to:

PHA
TXA
PHA
TSX
LDA $0103,X
AND #$10
BNE BRKP

This is how the C64 roms do it ($FF4B)

Yea, the interesting thing is that if you move the ship, the stars
would spread out like they should, but after a few seconds would start
to converge on the diagonal line like you mentioned (along with the
asteroids, which pulvarize me at that point).

>I suspected this to be caused by a non-perfect random generator (address

>Does anybody know how the random generator on the Atari works? I read
>about a 9- or 17-bit polynomial in the POKEY, which reminded me of the
>way CRC's work -- they could well be used here!

I found this in Mapping the Atari:

"53770 (R) When this location is read, it acts as a random number
generator. It reads the high order eight bits ot the 17 bit
polynomial counter (nine bit if BIT 7 of AUDCTL is set) for the value
of the number."

Also found this on polynomial counters under AUDCTL (53768) which is
the option bye for the four sound channels (AUDC1-AUDC4):

"Polynomial counters are used as a source of random pulses for noise
generation. There are three polys: four, five and 17 bits long. The
shorter polys creat repeatable sound patterns, while the longer poly
has no apparent repetition. Therefore, setting BIT 7 of AUDCTL,
making the 17-bit into a nine-bit poly will make the pattern in the
distortion more evident. You can choose which poly(s) to use by
setting the high three bits in the AUDC registers. The 17-bit poly is
also used in the generation of random numbers."

And, as to your comment above about the random generator not being
entirely 'random', De Re Atari has this statement:

"These poly-counters are not truly random because they repeat their
bit sequence after a certain span of time. As you might suspect,
their repetition rate depends upon the number of bits in the
poly-counter...."

>Markus, if you read this: you did a GREAT job with XL-It! But _please_
>fix the random-generator so that I am not constantly hit by asteroids in
>Star Raiders (they also seem to suffer from this problem, and bump into
>me all the time).

> Bye!

> Sidney Cadot
> sidney@ch.twi.tudelft.nl

Yes, and if he can get the photons to 'sparkle' like the original, and
fix the photon firing sound effect (a little weak), then I would be
in heaven, cause if sure looks great on my 19" monitor.

Use an FTP client that can handle the job. Even the DOS based one that comes with Win95 can handle it if you use quotes.

I like CuteFTP 32-bit.

Wait a minute, PLA takes a byte off the stack and places it into the
accumulator. It doesn't put the status register in the acumulator now
does it?

On an NMI, the 6502 jumps to the address stored in $FFFA. $FFFC is the
power-on reset vector.

: >AND #$10 ; bit mask to see bit '4' only, the BRK bit.
: >BNE BRKP ; on the BRK branch to the BRKP service routine.

: This is the same code published in Rodnay Zaks's book "Programming the 6502",
: which struck me as incorrect.
: Since this code will be in an interrupt service routine, don't you
: have to save at least the A register on the stack to preserve the value the
: interrupted program had in it, thus making the P register value on the stack
: inaccessible to PLx instructions?
: Zaks says in the description of the BRK instruction that "the value of
: P stored on the stack has the B flag set to 1, to differentiate a BRQ from an
: IRQ." However, it seems much more logical for the processor to set the break
: bit in the P register *after* having pushed the original P register onto the
: stack. That way the bit can be tested with a PHP/PLA/... sequence sometime
: after the previous value of A has been safely tucked away on the stack. Also,
: on RTI, the break bit will be automagically set back to 0 when the P register
: is restored.

Well, the code is incorrect indeed. But in fact, the Break flag is
always set - except on the stack after an _interrupt_ (not BRK) is sericed).

The Commodore machines use somehting like the following code fragment to
check for IRQ or BRK:

IRQ routine -> PHA
TYA
PHA
TXA
PHA
TSX ; load X register with stack pointer
LDA $0104,X ; load SR from stack into AC
AND #$10
BNE BREAK
```

hope it helps

Yea, I read that too. I wonder -what- polynomials are actually used... I
now
a thing or two about CRC's and I think I would be able to reconstruct
determinalistically the inner workings of the POKEY if I had some more
info.
Would that be a cool emulator feature or what:

"Even generates the same random numbers"

Wow! :-)

> And, as to your comment above about the random generator not being
> entirely 'random', De Re Atari has this statement:

> "These poly-counters are not truly random because they repeat their

Yea, I've been doing some experiments on the 800 XL to determine how
RANDOM works... interrupts & DMA off, and trying to recognise patterns,
and indeed they do occur. But it will be a mighty (and utterly useless)
task to do it (so I probably will finish it one day).

They sure do!
9 volts AC. The power supply I use provides for 2 disk drives at 3
amps each. This is a custom built supply, so I'm not sure of the
current that a normal 1050 power pack gives out.
Anyways, there you go..

That should be Bill Wilkinson. Bill Atkinson is the guy who wrote the
QuickDraw routines used in the Lisa and the original Mac, MacPaint, and
HyperCard.

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-19 00:00:00 UTC
From: mratari01@aol.com
Message-ID: <19970219131800.IAA02597@ladder01.news.aol.com>
Source record: 75603

This message seems a little strange coming from my lips, and you may have to read between the lines a bit to get the gist of my true meaning.....

I have been an Atari 8-Bit software developer from day one, not only working for Atari, but also for my own company. To this day, over 50% of my total income is derived from support and sales of Atari 8-bit software.

I have long been arch-enemies with pirates of all sorts. From those who just cracked stuff, to more importantly (To me at least...) those who would wantonly remove the true author's name from a piece of work and insert their own. I have been the victim of this time and time again, yet I have still survived....

Now, as per Yogi's site... Yogi's site, as near as I can tell consists of only files for use with the emulators. People wanting to run programs on "THE REAL THING" are not going there looking for stuff in the first place. As such, I have noticed an upswing in the Atari Community, and more people actively seeking out REAL Atari computers, because they experienced again, or possibly for the first time, the joys of Atari on their IBM emulators. Once they got a REAL ATARI, they come to me and others like me to buy their software.

Bottom line here folks is this.... Live & let live.... Each one of us can support our favorite platform in our own way. If each person with an Atari will just BUY their software, and it wouldn't even hurt those running emulators to send a little contribution to those who are still supporting the 8-Bit, we can all enjoy our platform to the fullest and do so without being at each others throats.

The Shadow

1781. Re: Emulator Screen Captures?

Newsgroup: comp.sys.atari.8bit

Do not respond to this address! <postmaster@inficad.com> wrote in article
<5e3fjl$9u3@lana.zippo.com>...
> I'm fiddling around with a couple of emulators and trying to get a screen

> capture, without much success. How can one do a screen capture with an
> emulator?

Try it under Windows 95. When you want to do the screenshot, just press
Alt+Enter to switch from full-screen to windowed mode. Windows 95 will say
that the program will not run in a window and it freezes the session. Now
you can use any Windows grabber to capture the window.

How about a more expensive TV with real NTSC capability? Mine has it (I'm watching NTSC Laserdiscs on it), so that should work...

Maybe I'm missing something here, but Yogi has repetivily stated that he's a pirate and could careless about your "opinion". How then, is he "justifying" anything?

Are you PERONALLY losing anything due to his actions? If not, then please stop this thread. If you are, then please feel free to file a civil suit against him.

: p.s. Don't bother coming back with your attempts at justifying your
: position, face it, you don't have a position. I nor anyone else really
: cares about you perticular form of greed.

I, for one, as an individual, with all rights to my own opinion, am glad for his site. His site does provide for files that would be otherwise lost.

Lets take for example, the Infocom games. I know for a fact that the 8bit version of Zork, etc.. are no longer commercially available. I have personally purchased the last remaining inventories.

Sites like Yogi's, although technically illegal, do provide for files no longer available commericially.

The 8bit is a dead platform commerically. If anybody doubts that, then you're a bigger fool than I.

Krieg's Klassic Karts Auction #2

**************************************************************************
* This auction will take bids until Feb. 28th. Then it will transition *
* to a Going, Going, Gone phase. Updates will be sent to participants *
* daily by e-mail. *
* *
* Thanks for your participation! *
**************************************************************************

Overview of the contents of this auction:
Atari 2600 66
Atari 5200 8
Atari 7800 4
Atari 8-bit 4
C64 6
Colecovision 1
Intellivision 20
Sega Master 1
Paper goods 19
Hardware 5

Minimum bid increments
.25 - 5.00 .50
5.00 & up 1.00

Shipping is extra.

Trades are also welcome. I collect many classic systems. Trades may cause
some items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

: The documentation on the Ape Home Page says nothing like what you
: just quoted. Please do not presume to speak for me.

The docs say that the APE cable goes at 57600.That's slightly faster
than 53200.

Of course the little pause between sectors is (I assume) gone,so it
is probably faster still.
(Like a track buffering drive like the Happy or Duplicator drives)

: Klugh) wrote:

: >They mean using a ZIP drive with a Atari,not a PC.
: >Accessing a ZIP drive through a PC would be too slow.

: _Only_ if you could hook up the ZIP drive to the ECI or some other
: parallel port of the Atari.....(and probably even then, the Atari
: couldn't keep up, unless it can handle sustained throughput of
: 600K/sec?).
: The original poster was thinking about using the ZIP drive hooked up
: to the PC and using it with APE....which menas that hte limiting
: factor is the speed between the PC-Atari interface (serial), as
: opposed to the ZIP-PC interface, which is quite a bit faster than SIO.

Exactly,hooking up a ZIP drive to the Atari without a PC would be much faster.
The APE cable gives you 5760 bytes a second.Interfaces like IDE interface give
the Atari 58k a second.

: I've tried using a PC floppy drive with APE Ultraspeed, it slows down
: when the floppy is accessed, but only becasue the BIOS has a
: preprogrammed .5-second or so delay to wait for the floppy motor to
: spin up, and when the head seeks to the next track, ther'es a delay
: for head settling time, etc. (i.e. the slowness isn't caused by the
: PC-to-floppy interface, which is a lot faster than the Atari-to-floppy
: interface) So it seems very jerky.....like there would be a burst of
: sectors transferred to the Atari, and then a half second delay as the
: PC's floppy drive spins up and finds the next track, and then another
: burst of sectors, and another delay, etc. But in the end, it still
: loads faster from the PC floppy (with Ultraspeed) through APE than my
: ATari does thorugh my Indus GT (without Synchomesh), but it seems

Synchromesh must be slower than UltraSpeed.

: slower especially if you're comparing it with a hard drive, but that's
: normal since a hard drive has no spinup time (since it's always
: spining), and access time is extremely quick so all you get is a quick
: burst of sectors through APE with almost no hesitation whatsoever.

Since the BIOS is used to acces the floppy drive (even if you go through DOS)
instead of a device driver,there's no concept of opening the device.
With a device driver,whenever a file is opened on the floppy disk,a "open"
packet is sent to the device driver.This could be used to turn the drive
motor on,and closing all files on the floppy disk (which would send a
"close" packet) would turn it off.

Of course you could always just increase the motor-on time.

: I'm not sure of the ZIP drive technical specs, but it certainly won't
: be nearly as quick as a hard drive in terms of access times and
: throughput, as it is basically just a very high capacity, higher speed
: floppy drive.

You said that APE ran at 600k!
That's faster than my hard drive.
Since fastest interface I know if is 58k a second (and it's not DMA),
I don't think that the Atari would notice the difference.

: >From the APE docs,APE is only slightly faster than UltraSpeed.
: >(on a US Doubled 1050)

: Er....Ape has a 3X SIO mode which is 50% faster than Ultraspeed.

50% faster than APE UltraSpeed,8% faster than a ICD US Doubled 1050.
(USD 1050=53200,APE UltraSpeed=38400)

UltraSpeed is a protocol,not a actual speed.It's up to the disk drive to
tell the computer (DOS or OS RAM SIO handler) what speed to go.

Excuse me while I rant for a little while:

Have you always been this ignorant, or did you need to take classes?

Since everyone apparently has a right to their own opinion, I will express mine. Have you ever checked the number of posts this newsgroup gets in a day compared to the other system's newsgroups? If you had, you would notice the Atari newsgroup isn't exactly the nation's biggest. In fact, the people in this group are many of the hardcore Atari supporters who are left over from the 80s. People like Yogi are the reason there is any Atari presence on the internet. Let me reiterate, just in case you didn't understand it the first time. I don't care if Yogi pirated everything Atari ever wrote since the advent of the home computer--That was a decade ago! Get over it already. Think about who uses the programs on his archive: diehard Atari 8 bit users (those who didn't throw all their stuff away ten years ago) and who have taken the time to build an APE/Null Modem interface, some emulator users, and that's pretty much it.

And I don't want to hear any bleeding heart crap about how pirates sunk the Atari Corporation...mismanagement killed it as much as anything else.

Please feel free to comment, but think before you open your mouth. Contrary to what you say, Yogi IS appreciated and welcome in this small (and shrinking) community. And furthermore, this is not a "Warez environment", since 99.9% of the people in the world (unlike yourself) don't give a crap that some 30 year old kid that never grew up would like to play a pirated copy of E.T. Phone Home just one more time.

Thank you for your comments on the newsgroup...I welcome your feedback. But please try not to alienate the contributors. And I certainly don't want to hear garbage about how someone's kids go hungry because they can't sell a commercial copy of Chop Suey for $45, or how you deserve some respect because every Atari computer ever made has your jock size printed on the microchip.

Please pardon the frivolity, I'm one of the younger generation Atarians.

Falcon

1789. ID game: battlezone-esque

Newsgroup: comp.sys.atari.8bit

Anyone remember this game, it was like you were a very fast moving tank
duelling with an alien probe in this 'forest' of pillars?
Graphically it looked a little like 2600 battlezone. i think there
was also a warpzone bonus where you had to dodge stuf inwarp tunnel.

I know this is a little vague, but can anyone tell me if its name,
and if you can get it for an emulator?

thanks
kirk

The game your thinking of is Encounter from Novagen, written I think
by Paul Woakes who went on to write the excellent Mercenary.

I've never tried Encounter on an emulator, but it seems to work fine
on an 800 and XL/XE machines. Mercenary however doesn't seem to work
on a 1200XL.

Hope this helps

Graham

Nope. Everyone I know who has tried them has said never again.

>Exactly,hooking up a ZIP drive to the Atari without a PC would be much faster.
>The APE cable gives you 5760 bytes a second.Interfaces like IDE interface give
>the Atari 58k a second.

Well, that's exactly it.....even a PC's floppy interface can handle about 500k a second trasnfer rate (of course, actual rates are much less because of a lot of other factors).

>Synchromesh must be slower than UltraSpeed.

I think they're about the same (roughly twice as fast as regular SIO), but using an actual drive with Synchromesh or Ultraspeed requires formatting it in a special format (and subsequent accesses without Syncro or Ultraspeed will be even slower than a regular disc), whereas with APE, it can use the same ATRs in any of its speed modes (regular SIO, 2x Ultra, and 3x APE+) with no reformatting or anything.

>: I'm not sure of the ZIP drive technical specs, but it certainly won't
>: be nearly as quick as a hard drive in terms of access times and
>: throughput, as it is basically just a very high capacity, higher speed
>: floppy drive.
>
>You said that APE ran at 600k!

No, I said that the Zip drive can probably handle transfer rates of 600K/sec or even faster (Iomega claims close to 1Mb/sec, but that's probably with the Scsi version). Whether it can acutally achieve 600K sustained tranfer rates in acutal use is a different matter, but it IS a couple of times faster than a PC's floppy.

>That's faster than my hard drive.

Your Atari hard drive? Even a regular IDE hard drive for the PC can achieve about 1M/sec, and EIDE drives (the standard these days) can achieve 3M/sec or more......
The limiting factor with hooking up a hard drive to the Atari is the interface....even the parallel interface is too slow.....

>Since fastest interface I know if is 58k a second (and it's not DMA),

Atari-to-hard drive interface?

>I don't think that the Atari would notice the difference.

It wouldn't, for the reason you state about, but also because of the types of files you'd have with an Atari. It's highly doubtful that you'd have a large multimegabyte sequential data file (do you?) which would really take advantage of the sustained throughput (at least on a PC.....58K/sec isn't much to brag about), instead, ATari files tend to be a lot smaller so what's more important in a hard drive on an Atari then would be things like access time, latency, etc, since it's rarely going to be reading sequentially from a large file.

You don't want to build or buy a SIO2PC cable, or an APE cable, or an
XFormer cable?

You could use an emulator to create DISKCOM files from .ATR images.
But then you need a way to send the DISKCOM files over to your Atari.

Do you have a way to connect your PC to your Atari via a NULL MODEM
CABLE?

There is really no reliable way to have your PC write onto Atari
floppies.

reply ????

: >>(on a US Doubled 1050)
: >
: >Er....Ape has a 3X SIO mode which is 50% faster than Ultraspeed.
: >

: I dunno about 50%. It is a little faster. I timed the transfer of a
: single density disk-
: US speed- 30 seconds
: APE+ - 22 seconds

The aditional speed-up is from the much smaller track-to-track time
of a hard drive.(and that extra 8% of SIO speed)

: Of course this is on my 286 PC, so results will vary from PC-PC.

I should think not.Besides different access times on different hard drives,
there's shouldn't be a speed difference between PCs with the same hard drive.
I should hope that even a 4.77mcps PC could keep up with a 1.79 Atari!

: APE+ speed is great when it works, but SpartaDOS tends to hang around
: and wait for a few seconds after reading 10-20 sectors. SuperDOS 2.9
: won't load the SDUP.SYS except after resetting a few times, and
: SuperDOS 5.1 seems to lose the drive status after loading.
: Don't get me wrong, APE is a great program! But, I'm sticking with the
: original SIO2PC software, cause I've never had any problems with it
: like I've had with APE. And I like having a "RAM-disk" to work with,
: which APE doesn't support. It writes directly to the image instead of
: an image in RAM- so if I bugger something up it stays that way! Not so
: with the original program, which can use all available RAM to make an
: image up to about 500k! (or more). Now, that's a RAM-DISK!
: Sorry, I was a bit off the thread there. Just my 2c worth :)

Why not use a actual virtual disk on your PC?
Look for a programme called SRDISK.(I think)
It allows you to make a RAM-disk anytime you want and to also delete it.

Of course,if Microsoft were smart,they would have made EMS/XMS memory look
like a Amiga RAM: type disk.You would allocate memory by simply creating
files (by seeking).Then a mmap(2) (Berekly UNIX) type system call could be
used to map files into memory.Then,if a programme quit un-expectantly,the
memory would automaticly be freed except if it had a file name (hard link).
Oh yeah,you'd be able to create nameless/linkless files.They'd be deleted
after the last programme close it.

But I dgress.

I'd like to establish that, once and for all...

> First revison was A, the cartrige for the 400/800 series.
> Second (B) was thje internal revision of the 600/800 XL series, which
> should fix some bugs of the A (don't know, what) but included some
> others. So sometimes files will grow bigger and biiger when saved to the

> disk ...
> Last Rev. C was the included Version of the XE-series ...

The weird thing is this: I recently borrowed a 130 XE from a friend of mine, which has exactly the same ROMs as my 800 XL! Now I thought it would have at least a different basic (indeed, version C), but it doesn't! So exactly for this reason I'd like as many people to try the ROMCRC-32 program, so it is possible to get a good overview!

Kind regards!

Sidney Cadot

Hi there, Doctor!

> : This will produce a 92160-byte long file called ROMCRC.XFD, which is
> : a disk image for the bootable ROMCRC-32 program.

> Did you tell PKZIP to just implode the file?

Well no, I did not... I thought ZIPPING the file would be the savest bet
-- I sort of assumed that if one has the tools to uudecode a file, it is
very probable one would also have the means of unzipping it...

> If it's deflated,then we can't use them.

On the Atari, you mean.... Would it be a better idea if I ARCed it? I'll
see if that works... I have a version 1.01 now anyway, so I could post it
again (ARCed, it seems to be only 797 bytes long!)

> As to this insitence to use HUGE XFD/ATR files instead of DCM,you could
> probably just write a BASIC programme to convert them since they're just
> raw images.

I could even write a version in just BASIC... No problem. If that helps,
I will!

> All moot,since you probably delfated the file.

The problem is being worked on!

Kind regards,

Sidney Cadot

Now I am very impressed! you are probably the most dedicated 8bitter I
know!

My knowledge of BASIC revisions was pretty limited. I have the REV A
BASIC cartridge, I have the built in basic REV B on my Xl. and i know the
basic A and B both suffered from lockup bugs and VERY slow floating point
calculations.
i.e. try ? 2^2^2^2^2 on your verision of basic. the REV A would TAKE
FOREVER..

1815. 8bit hardware for sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-21 00:00:00 UTC
From: Alan Christie <94chrisv@scar.utoronto.ca>
Message-ID: <Pine.GSO.3.95.970221144018.24845H-100000@fissure.scar>
Source record: 75478

Hi,
I posted a msg with my entire Atari 8bit software and hardware collection for sale and I did receive offers of $100 US for my entire 8bit book and magazine collection and $200 US for my entire 8bit hardware and software collection. Unfortunately, the email replies were deleted under my school account (I don;t know how) and I don't remember who these users were? They quoted me US dollars so I guess my only guess is they were American callers. and I know one of them was from texas. (That helps I know :)

Anyway if there is enough interest i will repost the entire for sale msg. The buyer assumes shipping costs...

Heheh, so JTS makes a lousy hard drive... too bad a successful company didn't take over ATARI corp.

Actually, I would like to see someone like bob Puff running Atari. A talented programmer, an avid Atari 8bit supporter and someone who is well liked. (I have purchased 8bit hardware from his company and was satisfied)

But this isn't a perfect world. Does anyone know what is going ot be down with the warehouses full of unsold Jaguar and lynxes???

1817. Krieg's Klassic Karts Auction Update #1

Krieg's Klassic Karts Update #1

**************************************************************************
* This auction will take bids until Feb. 28th. Then it will transition *
* to a Going, Going, Gone phase. Updates will be sent to participants *
* daily by e-mail. *
* *
* Thanks for your participation! *
**************************************************************************

Overview of the contents of this auction:
Atari 2600 66
Atari 5200 8
Atari 7800 4
Atari 8-bit 4
C64 6
Colecovision 1
Intellivision 20
Sega Master 1
Paper goods 19
Hardware 5

Minimum bid increments
.25 - 5.00 .50
5.00 & up 1.00

Shipping is extra.

Trades are also welcome. I collect many classic systems. Trades may cause
some items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

it's sad but they will probably end up as landfill, right next to all of those "E.T." cartridges from the 80's.

I've said this before in other posts, but I've seen them for as low as (US)$29 at J&R Music World in NYC.I saw them right before christmas so I don't know if they have any left but it's worth a try.

A while back I sold an 8bit Ghost Cart along with some other stuff to someone from this group and said that I would keep looking for the DOCS. I finally found them (right in the Action manual where they belong...). No the problem is that I don't remember who to send them to. Drop me an e-mail and I'll remember and stick 'em in the mail (leave your address again.

I happen to like Maxtor drives better than both of those, with WD
being right behind the Maxtor though. I think Seagates are crap
(except for the Barricuda line). Just my opinion. I like Maxtor
drives best of all.

I have the parallel port ZIP drive and it works alot slower than 600k,
even w/ the dos block driver. I think > 600k must be sustained
with an EPP. With a regular parallel port the zip is painfully
slow for files the size PC's normally use.

The driver for the zip drive apparently uses a small read ahead cache, so
for small files, its pretty 'zippy'. :)

> re-assemble, which will give me the original ROMs.Sorry to say this - but there is a very nice German re-assembler, which
allows to generate reassemles of the memory included and every binary load file (even without loading, just from disk).
With the package, there are Symbol tabels for the ATARI -OS of the 800 XL, the 800, the ATARI Dos 2.5 included, what allows you easily to generate assembale Source code for the German ATMAS II Macro Assembler.
Additional ther are some books out with a full reasmbled OS included (f.e. "Mapping the Atari by TWAUG). So this work was not nessecary ...

>
> But I was wondering about different ROM versions; for example,
> my copy of 'Mapping the Atari' talks of an A, B and C release
> of Atari BASIC, as well as of different versions of the Atari
> OS.As far as I know, there are five different versions of the Atari-OS out:
- the Atari 400/800 OS
- the Atari 1200 XL OS (early XL OS)
- one early XL - OS, dated someone in march 1983, included in most of the 600 XL sold in Germany (and US ?)
- the real XL-OS, included in most Atari-computer, dated with 10 of may (?) 1983
- a late OS, include in some XE and XEGS, someone of 1987 . This is something I only heared about, I never seen this thing ...

There only some liitle differences between the March and May XL OS. For the Reassembler f.e you only have to shift two adress areas to get reasonable code .
Shift area from C0F0 til CB73 to C0E2 and
shift area from FF02 til FFD2 to FF07

I donï¿½t know, if there are any serios differences ...

To the BASIC

First revison was A, the cartrige for the 400/800 series.
Second (B) was thje internal revision of the 600/800 XL series, which should fix some bugs of the A (donï¿½t know, what) but included some others. So sometimes files will grow bigger and biiger when saved to the disk ...

Last Rev. C was the included Version of the XE-series ...

Hope this helped a little bit ...

Matt

I just saw an article in PC FORMAT of an interview with Nolan Bushnell.
And man it looks like this magazine had it all backwards.

ATARI (is it a game piece or a move in go? They say a piece.)

Nolan (inventer of Pong and video games, or thief - didn't magnavox have
the home thing in production, ok was the first game space war or tank?
they say space war)

Ugh

You got a good point there.. MS arcade is great!! theres even another
version with dig doug and a few other " Golden Atari games" ... I have
also see "Williams Atari games" NEW for the Playstation soon to be
released. I just hate to hear a Jerk in the 8bit sigs crying for
other to sellout there good OLD 8bits.
I agree Winbloz 95 is the best VIRUS I have seen!!!
While Atari maybe gone for good, there games will live on for sometine..

Best Wishes.

Check out the Computer Shopper "March" 97 and you will read that Atari
has nothing but a HUGE wharehouse full of JAGs. There stuck with, cant
sell them cause B&C/BEST/Video 61 will not touch them with a 60 foot pole.
Its Sad but True. I just hope they dont smash them.

Dear Friend,
Five minutes and five dollars can change your life!!!THIS IS
THE FAIREST, MOST HONEST WAY I KNOW TO SHARE THE WEALTH! Would you
like to make thousands of dollars, quickly, legally, with NOCATCH?
Then keep reading..... please take five minutes to read thisarticle;
it will change your life, just like it did mine. It's true! You can
make up to, or over, $50,000.00 in 4 - 6 weeks; maybe sooner! I SWEAR
I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested,
keep reading; if you're not, I apologize forwasting your time.

Here we go. A little while back, I was browsing through these
newsgroups, just like you are now, and came across an article similar
to this that said you could make thousands of dollars in weeks, with
only an initial investment of $5.00!! So, I thought, "Yeah, right,
must be a scam", but, I was curious, like most of us are, and kept
reading. Anyway, it said that you send $1.00 to each of the five names
and addresses stated in the article. You then place your own name and
address in the article at the bottom of the list at #5, and post the
article in at least 200 newsgroups, (there are thousands). No catch,
that was it! So after thinking it over, talking to a few people first,
I tried it.I figured what have I got to lose except for 5 stamps, and
$5.00, right? Well, guess what....within 7 days, I started getting
money in the mail! I was shocked! I still figured it would end soon,
and didn't give it another thought. But then money kept coming in ,
tripling in size and multipying by 10 - 20 times the amount that I got
the first week! In my first week I made about 20 - 30 dollars. But,
by the end of the second week, I had made a total of over $1000.00!!!!
In the third week, I had over $10,000.00, and its still growing.
This is my fourth week, and I've made about $42,000.00 TOTAL, and the
money is still coming in.....Let me tell you how this works, and
most importantly, WHY it works, also, make sure you print a copy of
the article NOW, so you get the information off of it, and begin
making money.The process is very simple, and it consists of 3 EASY
steps:

STEP 1: Get 5 separate pieces of paper and write the following on
each sheet of paper...."PLEASE PUT ME ON YOUR MAILING LIST", and then
write your NAME AND ADDRESS. Get five $1.00 bills and place ONE
inside each piece of paper that you just wrote on. Fold each paper so
the bill will not be seen in the envelope, (otherwise, nosey people
who like to steal envelopes with money in it won't get yours). Put
one paper inside each envelope, and seal it. Do the same for all
five. You should now have 5 envelopes, sealed, EACH with a piece of

paper AND a $1.00 bill, stuffed inside of the paper. Make sure those words that were stated above, are written on each paper. What you are doing is creating a service; this is PERFECTLY LEGAL. Now then, mail the 5 envelopes, with the paper and $1.00 bill in each, to the following 5 addresses:

1. D. Ellis, 8301 W. 92nd St., Overland Park, KS 662122.

2. J. Krakowiak , 1112 W. Broadway #1, Anaheim, Ca 928053.

3. J. Sides, Lamar Box 1, South Plains College, 1401 S. College Ave.,Levelland, TX 79336

4. Areg Mkrian, 15 Alma Ave. Belmont, MA 02178-4404

5. A Karns, 4000 NW 53rd, Oklahoma City, OK, 73112

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up, (5 becoming 4, 4 becoming 3, etc.), and put YOURNAME as number 5 on the list. You can slightly alter this article ifyou need to; editing what you need to edit.

STEP 3: Post your amended article, (with your name at #5), to at least 200 newsgroups, (There are close to 19,000 of them). HOW TO DO THIS:If you are using Netscape 3.0, do EXACTLY the following:
1) Click on any newsgroup, like normal, THEN click on 'TO NEWS',which as on the far left when you're in the newsgroup page. This will bring up a box to type a message in.
2) Leave the newsgroup box like it is. CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!
3) Tab once, and you should be ready to type. Now, re-type, (onlyonce), this WHOLE ARTICLE WORD FOR WORD, except to insert your name at#5, and to remove #1 off the list; plus any other small changes youthink you need to make. Keep most of it the same!!
4) When you're done typing the WHOLE article, click on FILE in THISBOX, right above send, not where it says Netscape News On The FirstBox. Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.
5) If you still have all of your text, send, or post, to this news group, now, by just clicking send; which is located below FILE, and right above Cc:.
6) Here's where you're going to post all 200. OK, click on any newsgroup, then click on 'TO NEWS', again, in the top left corner. Leave theNEWSGROUPS BOX alone. Again, put a flashy subject title in the SUBJECT BOX. Hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click 'OPEN'. Now click on OK. If you did this right, you should be able to see your file name in the attachments box, and it will be shaded green.If you use IE EXPLORER, it's just as easy......HOLDING DOWN THE LEFT BUTTON,

HIGHLIGHT THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOURRECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1.00 TO. NEXT, GO TO THE NEWSGROUPS AND PRESS "POST AN ARTICLE". A WINDOWWILL OPEN. TYPE YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK INTHE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V", AND THE ARTICLE WILLBE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO, AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERY TIME YOU POST THE ARTICLE IN A NEWNEWSGROUP, ALL YOU HAVE TO DO IS REPEAT "CRTL" AND "V" AND PRESS POST.
7) That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 different newsgroups. You see? Now you just have 199 to go!!! (Don't worry, eac hone takesabout 30 seconds; once you get used to it). REMEMBER ..200 IS THE MINIMUM. The more you post, the more money you'll make.AND THAT'S IT!!!! THOSE ARE THE ONLY 3 STEPS THERE ARE!!! You are now in the mail order business, and will start receiving $1.00 envelopes from various people, all over the world, within days.(HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILLMAKE!). You may want to rent a PO Box, eventually, because of all the mail. If you wish to stay anonymous, you can come up with a name, suchas "manager" or"investor". Just make sure all the addresses are CORRECT, please! LET ME TELL YOU WHY THIS SYSTEMS WORKS!! Out of every 200 postings, let's say I ONLY receive 5 replies, (this is actually VERY LOW). So, I made $5.00 with my name at #5. Now then,each person who just sent me $1.00 makes, say, only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1.00 now; that's $50.00 you just made! Now then, your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, or10,000 postings, (50 X 200). Average return is 500 at $1.00 each, which is $500.00! They make 200 postings, which is 5000 returns at $1.00 each,which is $5000.00!! And finally, 5000 people make 200 postings each,with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000.00 BEFOREYOUR NAME DROPS OFF THE LIST!! AND THAT'S IF EVERYONE MAKES ONLY 200 POSTINGS, AND IF ONLY A SMALL % PEOPLE RESPOND!!!When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5.00 to THE NAMES ON THE LIST, PUTTING YOUR NAME AT #5 AGAIN, AND START POSTING AGAIN!! The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND ARE READING THESE ARTICLES EVERY DAY!! JUST LIKE YOU ARE RIGHT NOW!!! So, can you afford $5.00 and see if it really works? I think so.......People have said, "What if the plan is played out and no one sends you the money?" So what! What are the chances of that happening when there are TONS OF NEW, HONEST USERS AND NEW, HONEST PEOPLE joining theInternet and Newsgroups everyday? and, are willing to give it a try? Estimates are at 20,000 to 50,000 new users, each and every day!! Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!! You just have to behonest. Make sure you print this article out, RIGHT NOW, also, try to keep a list of everyone that sends you money, and always keep an eye on the newsgroups to make sure everyone is playing fairly. REMEMBER: HONESTY IS THE BEST POLICY!!

YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY! GOOD LUCK TO ALL, AND PLEASE, PLAY FAIRLY; YOU WILL REAP THE HUGE REWARDS FROM THIS.....WHICH IS TONS OF CASH!!! ****By the way, if you try to deceive people by posting the messages with your name on the list, and by not sending the money to the people already on the list, you will not get much. Someone I talked to knew someone who did that, and he only made $150.00; and that was after seven or eight weeks!! Then, he sent the 5 $1.00 bills; people addedhim to their lists, and in 4 - 5 weeks, he had over $10,000.00. THIS IS THE FAIREST, AND MOST HONEST, WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME! GOOD LUCK, AND HAVE FUN!!!!

1833. FS: Atari Computer Goods! Even More Atari Stock! FREE Catalogs!

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-21 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5ek0nh$s41$1@kelly.teleport.com>

Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got Monitors for your Atari 8 Bit like Commodore CM-141 "Like the Commodore 1802" And Disk Drives for the Atari 8 Bit like Stock 1050 and a 1050 Duplicator Drive for Backing Up Software. Plus I've bought out the Game Cartridge Gorf for the 400 & 800 & the Educational Math Game Cartridge Space Journey for any Classic 8 Bit Atari Plus I've cornered the Market on New Copies of Print Shop and some Print Shop related Items! That's Gorf, Space Journey & Print Shop All New Copies, All for the Atari 8 Bit! Plus a Good number of SSI and Avalon Hill/MicroComputer Games, and Many of them are Complete. Plus some Flight Simulator II from SubLOGIC including Scenery Disks all for the Classic Atari 8 Bit. For the Atari ST & newer Computers I've added to my HardWare Catalog Spectre GCR Mac Emulators, Indus (Future) GTS-100X Disk Drives, Panasonic MultiSync Monitor that does Double Duty for both ST Color and MonoChrome Monitors and the Cable/Hardware to your ST Computer. I've also added Software to my ST Catalogs & revised my prices. Titles such as Shrink Wrapped Brand New copies of Ultima V for those of you Ultima Collectors & for you who like Flight Simulators, theirs F-15 Strike Eagle, F-16 Combat Pilot, Falcon, Falcon extra Missions Disk, Fighter Bomber and Flight Simulator II. In Productivity Software, theirs Data Manager ST, Degas Elite, Easy Draw, MultiDesk, NeoDesk, Revolver & PageSTream. All for the ST.

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports.

You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Steve,
I don't know about yours, but mine runs just a little slower than
my normal hard drive. This one is even dealing with a network printer
going through it. Iomega says that their SCSI version (assuming it is
on a real SCSI port, not a ASCSI on the parallel port) is as fas or
faster than most regular hard drives. I'm planning on getting a second
ZIP drive. This time a SCSI version.
Has anybody answered the original question? Can you interface the
SCSI Zip to say an MI/O or Black Box? I must have missed it if it was.

From: Wes Mangum <wmangum@vnet.net>
Message-ID: <330D8C29.423F@vnet.net>
Source record: 75546

Xl-It 0.17 does not recognize the ATR images in the megagames directory
of the archive. Most of the files are 1,048,592 bytes. I have tried
several utilities to copy the individual files from these atr images and
found that S2PC works. Once I copy an individual file from the original
ATR image to another one (90K) it works fine.

Is there a more direct method of accessing these atr images from XLit?
Do I need to use a different FOD? I have tried DOS 2.5 and MyDOS 4.5.
I have not been able to get SpartaDOS to work.

BTW, Xformer reads these large ATR files without any problems.

Any assistance would be appreciated.

I've added support for H1: through H8: in my current development
version. That version should be available next week.

Each virtual harddrive can be mapped to a MS-DOS directory.
This means that you can load, save etc. directly from/to your
PC's-harddrive.

Just to let you know,

Markus

I have a couple of zip drives and they are all *way* slower than even the
slowest hard drives of the machines they are attached to. I don't see how
Iomega could claim that the SCSI zip drive would be as fast as a HD, it spins
so much slower. A Jaz drive on the other hand is faster than a lot of hard
drives.

Not all at once I hope :)

Just kidding. The XF551 is a very nice drive, but it has it's
drawbacks. Like not having a power LED for one- it is constantly
irritating not knowing whether the drive is actually switched on or
not. And having the power switch on the back is an absolute pain..
Why didn't Atari design a drive that could be powered directly from
the computer instead?
Whoa... getting off track here. Sorry..
1 drive not accessing could have been an internal problem, but 3
drives?? all with the same problem? Maybe you could check the SIO
cable(s) for loose or broken connections, or possibly one of the pins
in the I/O port of the computer may have been pushed in. This happened
to an 810 disk drive of mine, a pin somehow got pushed right inside
and made the drive unaccessable.

Hope you can sort the problem out, I know what it's like when your'e
without disk access.

Somewhere I have a patch for Turbo-Basic XL to let it run with
Happy-DOS. If people want it let me know and I'll dig. :)

You can use 0.16 or you might wait until next week (for version 0.18).
0.17 has a bug that doesn't let you use these images.

> I have not been able to get SpartaDOS to work.
SpartaDOS 3.2g works.

Bye,
Markus

: - The Doctor

: Yes, but I use LFN under w95 for the binaries, and I'm not sure how
: the atari will treat the ~
: It will probably show up as an illegal filespec.

Oh,you're talking about the aliases.
Is there a way to tell Windows 4 (Ms-DOS 7 has no concept of long files
names,only the Windows-DOS does) what filename to associate with a alias/LFN?

You'd think that Microsoft would have just used 4DOS (NDOS) descriptions
if they weren't going to implement NTDOS or some other long filename DOS.
Many programmes have suports for 4DOS descriptions anyway.And you don't
get strange filenames.
That's another thing,if you created a Alias with Win4,you'd think
"Asteroids.com" would just become ASTEROID.COM and not ASTERO~1.COM or
whatever.The tilde thing would only be used when you then added
Asteroids2.com.

: >Exactly,hooking up a ZIP drive to the Atari without a PC would be much faster.
: >The APE cable gives you 5760 bytes a second.Interfaces like IDE interface give
: >the Atari 58k a second.

: Well, that's exactly it.....even a PC's floppy interface can handle
: about 500k a second trasnfer rate (of course, actual rates are much
: less because of a lot of other factors).

But you actually get 58k a second,not theoreticly.The creator timed it.

: >Synchromesh must be slower than UltraSpeed.

: I think they're about the same (roughly twice as fast as regular SIO),

Actually UltraSpeed is almost three times as fast.
(The APE is 8% faster and is precisly three times faster.Plus the faster
access time)

: but using an actual drive with Synchromesh or Ultraspeed requires
: formatting it in a special format (and subsequent accesses without
: Syncro or Ultraspeed will be even slower than a regular disc), whereas
: with APE, it can use the same ATRs in any of its speed modes (regular
: SIO, 2x Ultra, and 3x APE+) with no reformatting or anything.

So,just use UltraSpeed all the time.There are OS RAM SIO handlers for boot
games.
My drives have a track buffer,so the sector skew doesn't matter.
I think that Happy drives are the same,but they don't use UltraSpeed.

: >: I'm not sure of the ZIP drive technical specs, but it certainly won't
: >: be nearly as quick as a hard drive in terms of access times and
: >: throughput, as it is basically just a very high capacity, higher speed
: >: floppy drive.
: >
: >You said that APE ran at 600k!

uh,that should say ZIP,not APE.

: No, I said that the Zip drive can probably handle transfer rates of
: 600K/sec or even faster (Iomega claims close to 1Mb/sec, but that's
: probably with the Scsi version). Whether it can acutally achieve 600K
: sustained tranfer rates in acutal use is a different matter, but it IS
: a couple of times faster than a PC's floppy.

: >That's faster than my hard drive.

: Your Atari hard drive? Even a regular IDE hard drive for the PC can
: achieve about 1M/sec, and EIDE drives (the standard these days) can
: achieve 3M/sec or more......

My IDE drive went at 300k a second.When I got one of those fancy cards that
bypass DMA (seems to work like Atari hard drives,just reads bytes of a I/O
port),I got up to 1MB a second on my 80486-33.

: The limiting factor with hooking up a hard drive to the Atari is the
: interface....even the parallel interface is too slow.....

If you mean the PBI,the IDE interface can go at 32k a second.
(slower becuase a boot game would be using 128-byte
sector access.Actually,32k is for 256-byte access,so non-DOS games would
probably be a bit slower)
Any games would load up in a second.

: >Since fastest interface I know if is 58k a second (and it's not DMA),

: Atari-to-hard drive interface?

IDE to Atari PBI interface.

: >I don't think that the Atari would notice the difference.

: It wouldn't, for the reason you state about, but also because of the
: types of files you'd have with an Atari. It's highly doubtful that
: you'd have a large multimegabyte sequential data file (do you?) which
: would really take advantage of the sustained throughput (at least on a
: PC.....58K/sec isn't much to brag about), instead, ATari files tend to
: be a lot smaller so what's more important in a hard drive on an Atari
: then would be things like access time, latency, etc, since it's rarely
: going to be reading sequentially from a large file.

That's what I meant.You want to look for seek time in a hard/ZIP drive for
the Atari since they all obviously are fast enough for the IDE PBI
top transfer speed.
(perhaps with DMA...)

I think it's something a player says, like "checkmate".

>Nolan (inventer of Pong and video games, or thief - didn't magnavox have
>the home thing in production, ok was the first game space war or tank?
>they say space war)
>
Space War could be considered the first "video game", but it wasn't a home
or arcade game, as it was played on a PDP-1 computer at MIT. Years later,
there was an arcade version.

: Is there a more direct method of accessing these atr images from XLit?
: Do I need to use a different FOD? I have tried DOS 2.5 and MyDOS 4.5.
: I have not been able to get SpartaDOS to work.

What's a FOD???

XL-it has a bug in it that makes you have to type the extension in lower-case.
I always found this weird since all MS-DOS filenames are in upper-case.

: BTW, Xformer reads these large ATR files without any problems.

Xformer was always my choice.I just used it as a complement to my atari.
(great for BASIC text games,or BASIC games that are just slow)

1853. Using ATRs and XFDs with REAL Atari

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-21 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us
Message-ID: <5ekvr4$t59@login.freenet.columbus.oh.us>
Source record: 75563

Is there a programme to convert ATRs and XFDs into a actual disk on the Atari.
I see all these games that I can't use on Yogi's (noone@nowhere) site.
It has to run on a Atari or ST.
Of course on the ST,it would need to be a programme to convert ATR/XFD
files into DCM or other Atari disk format.
(SpartaDOS's SCOPY SCP file or a Scrunch file)

1854. Re: Atari 8-bit ROM Documentation Project

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-21 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us
Message-ID: <5el0ha$3v2@login.freenet.columbus.oh.us>
Source record: 75564

Sidney Cadot (sidney@ch.twi.tudelft.nl) wrote:
: Hello all!

: During the few last weeks I have devoted some of my spare
: time to documenting the ROM listing of my Atari 800 XL. I am
: now at the stage where I have a source code which I can
: re-assemble, which will give me the original ROMs.

: But I was wondering about different ROM versions; for example,
: my copy of 'Mapping the Atari' talks of an A, B and C release
: of Atari BASIC, as well as of different versions of the Atari
: OS.

: Therefore, I'd like your help to be able to get a complete
: overview of all the ROMs in all the different 8-bit machines
: Atari ever produced. In order to be able to reach this goal,
: I have written a very little program which calculates a 32 bit
: CRC (a sophisticated kind of checksum) for 8 important memory
: areas of the Atari 8 bit family:

: FIRST ROM
: C000-CBFF: XL/XE Systems: OS Interrupt Handlers & Stuff.
: CC00-CFFF: XL/XE Systems: International character set.
: 5000-57FF: XL/XE Systems: Selftest ROM
: D800-DFFF: All Systems : Floating Point Package

: SECOND ROM
: E000-E3FF: All Systems : Standard Character Set
: E400-FFFF: All Systems : Operating System

: CARTRIDGE A
: A000-BFFF: XL/XE Systems: BASIC

: CARTRIDGE B
: 8000-9FFF: Second Cartridge

: At the bottom of this message, I have included a uu-encoded
: message of only 939 bytes long, which contains the program
: ROMCRC-32 (release 1.0). Unpacking should be done like this
: (assuming you will use PKUNZIP and UUDECODE):

: (1) save the uu-encoded part (from 'begin' to 'end') as romcrc.uue
: (2) on the command-line, type UUDECODE ROMCRC.UUE
: (3) on the command-line, type PKUNZIP ROMCRC.ZIP

: This will produce a 92160-byte long file called ROMCRC.XFD, which is
: a disk image for the bootable ROMCRC-32 program.

Did you tell PKZIP to just implode the file?
If it's deflated,then we can't use them.
As to this insitence to use HUGE XFD/ATR files instead of DCM,you could
probably just write a BASIC programme to convert them since they're just
raw images.Of course you have to know about Atari's ML interfaces like I do.
(you just have to know pokes for accessing SIO,BASIC's XIO command is good
enough to read the file)

All moot,since you probably delfated the file.

Dave Navajo (knave@usa.net) wrote:
: "Richard Forester" <forester@blarg.net> wrote:

: >Since you can supposedly use the keyboard in place of a joystick, what key
: >is the fire/jump button? I think I have tried everything but to no avail.

: 4 tips concerning Xformer:

: 1) Use the shift F10 key to set the emulation to straight 800 mode
: that runs nearly everything.

But reseting switches you back to having BASIC on.
Try it yourself.Use the "M" command from MyDOS and enter address E474.
This is the same as pressing the RESET key (sort of) and it will cause
BASIC to re-enable.(which it shouldn't.Only E477 should do that,
which is the re-boot vector)

Of course I'm speaking of 800XL mode,not 800 mode.

: 2) The keypad's 0 is the fire key, ain't it?

: 3) RTFM

Whatever that means.

: 4) Get Markus Gietzen's XL-it, which is better.

It was too damn slow for me.Of course I only use emulators to test out
things and to run slow BASIC programmes.(for which I use Xformer)

From: Lane Grayston <lgraysto@es.com>
Message-ID: <330E1CCF.5059@es.com>
Source record: 75568

I just dug my Atari stuff out of the basement, and am having a few problems. I am intersted in buying the following items:

Disk Drive - I own an 810 with a happy chip. I am afraid it is on its last legs. I will consider any drive, but would prefer and 810 with happy for guarenteed compatibility.

Alternatively, if someone could refer me to somone around Salt Lake, Utah who could repair the drive, that would work. Even if someone can sell me some service manual, I could try to take care of it myself.

RF switchbox - I am on my last one.

Joystick(s) - I could use at least one more.

Softare: Archon II, Necromancer

If you have any of these for sale, please email me at lgraysto@es.com.

Thanks in advance for any information that will help me out.

Lane

Fair

MATCHBOXES instruction card from Broderbund
Very Good

FLOPPY SOFTWARE

VEGAS POKER User's Guide plus Cart (Eprom). Also several floppys of the same game. One floppy stamped "Atari Company Trade Secrets Enclosed". I guess I had one of those stamps.This is the program I wrote at night while a Game tester. It led to my being promoted to programmer, but I refused to "give" it to the company so it never got published. User's Guide is 1 page printout. The game is the first Poker Slot Simulation ever written (to my knowledge)
Excellent

MICRO ILLUSTRATOR from Koala by Steve Dompier. Floppy plus manual Excellent

CARTOON MAKER 1982 by me. 5 page instructions for a stupid little software toy I put together using routines I had written for the PLAYER MISSILE EDITOR. Floppy plus manual Good

ATARI MUSIC II. Release software. 2 diskettes, manual, warranty card, box Excellent

FAMILY FINANCES 1 & 2. Official Atari release on 2 floppys. Excellent

PREPPIE II. Floppy plus Very colorful cover to manual Excellent

SOUND AND MUSIC TRICKY TUTORIAL #6 manual and casette tape from Educational Software Excellent

CROSSFIRE Floppy Disk in official dust jacket plus manual from ONLINE SYSTEMS (later became Sierra OnLine) Excellent

REALM OF IMPOSSIBILITY by Mike Edwards from Electronic Arts.......Floppy only Excellent

THE E FACTOR Floppy and manual from Cosmi Excellent

SWEAT SYSTEM Rev #3 Serial #24 stamped "Atari Company Private Trade Secrets Enclosed". There are 5 floppys in the set. The trade secret stamp is on a sticker that has been removed from disks 1 and 2 only. Disks are labeled as follows:
disk 1: Screen, Dledit, and Sstrans
disk2: Screen, Cedit and Sstrans
disk3: Pmedit and Sstrans
disk4: Sound and Sstrans
disk 5:P/M Animation Driver
Excellent

EXCALIBUR 1.0 the official floppy by Crawford, Summers, Atkinson, from APX (Atari Program Exchange) Excellent

A.E. floppy from Broderbund. Stamped Dealer Demo, not for resale. In a Broderbund dust jacket Excellent

BANK STREET WRITER floppy from Broderbund. Stamped Dealer Demo, not for resale. Excellent

LABYRINTH floppy from Broderbund. Stamped Dealer Demo, not for resale. Excellent

SKY BLAZER floppy from Broderbund stamped "dealer demo, not for resale:" in Broderbund dust jacket Excellent.

GENETIC DRIFT floppy from Broderbund stamped "dealer demo, not for resale:" Excellent.

S.A.M. serial # 19722 from Don't Ask Software. Speech synthesis Excellent

SEA FOX floppy from Broderbund stamped "dealer demo, not for resale:" in Broderbund dust jacket Fair

CASTLE WOLFENSTEIN floppy from Muse Software. Excellent

MICKEY IN THE GREAT OUTDOORS. From Walt Disney Personal Computer Software. in Dust Jacket Excellent

I also have some Plastic "frontplates" with decals from Coin-op games from 1978-1983. Also 2 early console cames, brand new in box. I'll get these out of the attic and include them in this list next spring.

Also official California License plates "ATARI" which were my personal plates in 1981-1984.

Please make offers via E-mail.

I know a littlt bit about this company. It used to be Tandon corp. which made he 1050 floppy drives for Atari. Later they got into computer systems for awhile, but lost big time on that. They changed their name to JTS, after their founder (and CEO?) Jugi Tandon (don't know if I spelled that right). I met him once when he played golf at the Bob Hope Desert Classic, when he was rolling in dough. He was taking his kid and all his kid's friends to the Super Bowl. That must have been 12 years ago. I wonder why he did buy Atari. Deal with the Tramiel's and your asking for a #$%@ing.

Ice-T 2.72 is now available from the umich archives and the screen dump print option now works again!

Thanks, Itay!

Also note for those of you who have been having problems downloading or are getting CRC or unarc corruption errors with Ice-T...

Make sure you have the D/L EOL trans. under the Mini-DOS menu set to "None". See if that helps you out with your binary downloads.

1864. Wild & Wacky Atari Auction #1

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-22 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970222062900.BAA13864@ladder02.news.aol.com>
Source record: 75487

The WILD & WACKY ATARI MEMORABILIA AUCTION #1

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
Everything has been tested except the Intv carts.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March 8th.

One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

From: Curtis J Hepworth <blizzard@mail.xmission.com>
Message-ID: <330E819E.1BD4@mail.xmission.com>
Source record: 75488

Does anybody out there know what I would have to do to repair a XE game system that was fried by me inadvertantly plugging an evil C64 power pack into it and turning the system on. (All I get now is a nice burned electrical smell and a red screen though it does still power up at least...any chance of just needing to replace something simple?) Outside of that is there anyone out there who has an extra XEGS they would like to sell? I would just need the bare console as I still have everything else in working order...please e-mail me if you can offer advise on repairs or have one to sell- thanks!

Curtis J. (feeling like an idiot!)

Message-ID: <330f0480.437176@news.demon.co.uk>
Source record: 75491

Ive downloaded some .exe files from the Jellystone Park archive. How do I get them to work through an emulator?

I use Rainbow and can only use .atr files with it, but most of the files I have seen are in .exe format.

I havent been able to get .atr files to work with Xlit or Xformer - how come? The screen either just goes corrupt or says remove cartrige.

Does anyone have a copy of the Atari 800XL SYSTEM ROM? I havent seen it around anywhere - I have the 800 SYSTEM ROM which works fine anyway.

Im new to Atari Emulation. So, which is the best emulator? I have a copies of Rainbow 95, Xlit, Xformer. Never seen Xlit or Xformer actually run something yet though.

1870. How do I read my Atari XE disks on a PC?

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-22 00:00:00 UTC
From: Sean Gabb <main@sufo.demon.co.uk>
Message-ID: <QL83lHAyhyDzEwvp@sufo.demon.co.uk>
Source record: 75493

I hope this is the right forum for my question. I bought an Atari XE in 1985, and during the next four years I filled up about a hundred 5.25" disks with letters, poems, a couple of novels, and lots of hardcore libertarian propaganda. Then the machine died on me, and I've been sitting on a hoard of unreadable disks ever since.

Since I'm told the magnetic impressions on floppy disks degrade over time, I've decided to make a big effort to try reading them on my PC. Can anyone help?

Let me say now that I'm not hugely interested in solutions that involve getting hold of some old Atari hardware. If possible, I'd like to do the whole thing with the PC hardware that I now have. Or has this limitation just made the whole thing impossible?

Any help will be gratefully received and acknowledged.

You can check the unofficial FAQ that Bill Kendrick has on using
various Emu's at:

http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html

But to help out somewhat, any EXE/COM/BIN/OBJ files must be placed
into a disk image file (or on a real floppy) before you can run them.
You must either [L]oad them from DOS, or write a Boot Sector loader to
the disk that will give you a menu to select them from.

BTW, Bill's FAQ is very informative, even for people with *real*
Atari's.

Hope this helps out.
Steve.

Yogi has Eastern Front in his archive-
check the mirror site at:

ftp://ftp.hackerz.com/hackerz/atari/jellystone/binaries/EXE-AtoI

Actually Eastern Front was the ONLY war game I ever played and
enjoyed. I've seen others, but none of them were as good to play.

Have fun.

>(SpartaDOS's SCOPY SCP file or a Scrunch file)
>--
> The Doctor

Its a real pity that no-one has written a program yet that will
actually convert ATR/XFD into DCM or a real disk.
There was a program written in BASIC that someone posted to
alt.binaries.atari that would convert an ATR/XFD into a real disk
using the 8-bit, but is very slow due to BASIC, and seems to have
problems with creating a proper copy of the image. I could have a go
at cleaing the process up and speeding it up too, if you like. If you
could mention what hardware you have: like 2 disk drives maybe? and do
you have 400/800/XL/XE? It'd be much easier if you have 2 drives
and/or 130xe or expanded 800/XL to be able to load the entire ATR/XFD
into memory.
Or I could just convert whatever software to DCM for you, I don't mind
a bit of hard work :)

Regards..
Steve.

Again, Make sure your SIO cables work, and check the solder joints inside the XF drives.

If the respond to other drive numbers.... well.. that is strange.

Did you get them all from the same place?

Steve (read@my.sig) wrote:
: Its a real pity that no-one has written a program yet that will
: actually convert ATR/XFD into DCM or a real disk.

There was a program that did just that, though I can't quite remember what the filename was. However, there is a way to convert it. Create a blank disk image of the same size of the ATR/XFD image. To do this, copy the good file to another file called BLANK.ext. Then go into the emulator, and format the blank. Run the DiskComm program, and tell it to diskcomm that disk onto the blank disk. I did just that with the ATR of Spelunker. It made the thing work a little better, but it still has problems. Anyone out there got it to work?

Now, copying that from the virtual disk to your hard drive, well, I've not done that yet.

: Or I could just convert whatever software to DCM for you, I don't mind
: a bit of hard work :)

Most excellent. Someone who doesn't mind a bit of hard work, and taking the time to play around with the system!

Yep it was the same people...But why I remember it the most is not the
game itself but the music (sorry Phillip). Gary Gilbertson / Paradise
Productions If memory serves right...

I think it was his best tune (IMHO).. very effective..
I think he lives in Hawaii (?) now....

Phillip Price who wrote the game has graced this newsgroup from time
to time and keeps an eye on the postings.

As for where to get it....Yogi`s site or the mirror
ftp.hackerz.com in the Atari dir. Its in one of the Binary packs but
the version in it lacks the intro....

if it is even possible to hook up a ZIP drive or CD rom to the 8bit, will it go any faster than the 58k/s limit the parallel bus on the 800Xl?

I had a Black Box on my Xl a few years ago, and I remember all the HDs ran the same even if they were faster. Something to do with the data transfer limit of the 8bit. (Hey we are still talking about a 6502 CPU...) I can't see hooking up my 2.1 GIG (9ms) Seagate drive to an 8bit and seeing it run faster the a 20meg SASI FM Seagate drive..

Alan

>I just saw an article in PC FORMAT of an interview with Nolan Bushnell.
>And man it looks like this magazine had it all backwards.
>
>ATARI (is it a game piece or a move in go? They say a piece.)

It means 'check' in the game Go, or at least the idea of check...

>Nolan (inventer of Pong and video games, or thief - didn't magnavox have
>the home thing in production, ok was the first game space war or tank?
>they say space war)

Nolan came up with the orginal concept of Pong, but Alan Alcon
actually programmed it and made it what it the game we know.

Ralph Baer first came up with a ball and paddle game for the Oddessy
in the late 60's. Now this is a tricky area as to whenever it was
"stolen". Way I see it, Ralph created the video game idea and Nolan
made it a commerical product.

BTW, Space War was the "first" arcade game.

It was from a computer(mainframe?) game written in college.

I have compared two different newsgroup servers that I can access.

At the University of Michigan, the news server only holds messages for
about two days.

My commercial ISP (ATT WorldNet) keeps the same messages for many weeks.
I guess it's a matter of you get what you pay for ?????

What newsgroup server (provider) are you using ???

I hope this helps......

1892. Re: How do I read my Atari XE disks on a PC?

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-23 00:00:00 UTC
From: Douglas Feldman <dafeldman@worldnet.att.net>
Message-ID: <330FD993.2897@worldnet.att.net>
Source record: 75370

This is a often-asked question here on c.s.a.8
There is not a very satisfying answer.

If your disks were written using an Atari disk drive that was modified
to format with 360K per disk, then you may have some luck with a few
available software programs.

If you used 1050 density or single density, then you need to get some
help from a friendly Atarian on here or in your home town.

One of the Atari -> PC disk readers is called UTIL. I can e-mail that
to you if you want to give it a try.

hope this helps ???

1893. 800XL, 1010 and cassette games for sale

From: davidson@interalpha.co.uk
Message-ID: <5eotks$jnr@Arthur.interalpha.net>
Source record: 75371

I'm moving house and found my old 800XL gathering dust. It's not of much use to me any more but I know you lot seem to like them.

Can anyone offer me a decent price? As it says in the subject, I've got a 1010 Data Recorder and several games for it. Some of the casing is a bit scratched but everything works. I'm in the UK so a British sale would be easier although not obligatory.

Please send private email.

I doubt it, since it's a hardware limitation....however, would it be
that much more useful to have a really high data trasnfer rate on a
regular 800XL? Even at 58k/s, the memory would fill up in little over
a second......

Brit 1 to the rescue with Chuckie egg 1 and Bubble trouble...Well my
list shows them so all I have to do is find them, ATR them and send
them to Yogis Site...If its back up...If not I will post them to the
Binary group or to Scott direct (if he does not mind)

Dont worry if this takes a week, I wont have forgotten. It will be
down to me changing phone company...They promise instant work and then
delay it a week......Bah!!!!

If there are any people who cant get them from the bianry group or
whatever link to Yogi`s site then mail me once I put a msg up saying I
have got them 100%....Just incase the disks are NOT cracked.....

Source record: 75377

> Has anybody answered the original question? Can you interface the
> SCSI Zip to say an MI/O or Black Box? I must have missed it if it was.Yes, you should. The Zip-drive just behaves as a normal harddrive. We have an IDE-Zip drive working with our interface now. There is only one problem: when the media was changed, the next access failes and you have to send a special command to accept the change. Then you have to reload all parameters and locations of partitions. We have included this yet in our driver, and you can use the Zip-medias just as a normal floppy-disk (but with 100 MB of space).

So I donï¿½t know, if the procedure with SCSI-Zips is similar than these one for IDE, but if it is, you will have problems, cause no SCSI-Interace on the 8-bit supports media-change. But without changing while the Computer is running, it should work just as a harddisk.

Matt

>support, but I can't see any way to change those.
>

It seems that if you want sound and joystick support you have to
specify it on the command line. Also if you want BASIC DISabled you
have to specify it too. I can't see why all these functions cannot be
placed as default, and the need to specify on the command line only if
you want them DISabled or BASIC ENabled. I suppose when considering
the BASIC option, it was to keep in line with how a real Atari works.
But as for the others, it's just a big hassle having to read up on the
DOC's all the time. Yeh I know it could be run in a batch file, but
then you'd need a batch file for every game disk/DOS disk/or
whatever...

Just my 2c worth.

At a guess all the disks are single density? If they are in Double
Density you may have luck with a program called UTIL, which works well
using a PC 360k disk drive, but has problems (maybe) with a 1.2mb
drive. For single density you could try using a program called
ANADISK, which can read an Atari S/D disk on a PC 360k drive, but I
have yet to see it read from a 1.2mb drive.
If you still have an Atari 810 or 1050 disk drive, you could try
getting the XFormer Cable, and using PC Xformer to read the disks
directly and copy them into ATR image files on the PC.

Without the hardware it's a pretty daunting task,
so I hope this helps somewhat..

1902. Re: 8bit binaries

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-23 00:00:00 UTC
From: read@my.sig
Message-ID: <331270aa.6830692@news.networx.net.au>
Source record: 75380

James Mirous <jim.mirous@mail.prostar.com> wrote:

>There was a binary site linked on Yogi's Jellystone, but now that Yogie
>is down, I don't have a link to it.
>Anyone have the link to atari 8bit binaries other than umich?
>Jim.

The mirror site at

ftp://ftp.hackerz.com/hackerz/atari/jellystone

is still active....
Hmmm, I just tried the Jellystone Park bookmark and got a message
thus:

Tron raised his identity disk and shouted "I Fight for the users,
Sark" Master Control calmly
derezzed him, pushing him back into the real world.
End of line.

It would seem that because of the flak flying around about the status
of ATARI COPYRIGHTS, Yogi has Derezzed his Archive.

All I can say to those that were giving him the full-on treatment-

THANKS A LOT!!!!! Now where the hell are we going???
Downhill without brakes. It looks like Archive support has bitten the
dust, and so will what is left of us 8-bitters. Especially those who
use Emulators, where are they going to get any software now? They cant
just go and buy a disk or a cartridge (where will they plug it in??).

I have kept quiet about this up until I found Yogi has left us, and
that was the last straw. Why can't you guys face the facts that ATARI
as a platform has bitten the dust. As for the software companies like
Electronic Arts, Origin, etc, who are still around today, they
probably wouldn't care less about 8-bit software being available on
the NET, considering the scope of TODAYS Software for the PC.
I might even consider withdrawing my support on the Web, simply
because I too might get flamed for having a home page!
Again thanks very much!

My thoughts.
Steve.

>
> AlanWell, you need at least 12-15 CPU cycles to read a byte and store it in
memory. That drops you down to 120KB or so. Then, ANTIC takes 30% of your
cycles. Down to 83KB.... Set up and all leaves you with 45-50KB of real
transfer capacity. Those sub-10 drives, by the way do improve your
transfer. A 5200RPM drive runs 15% faster than an old 3600 on my 8-bit.
Bob
by the way, all you IOMEGA folks - you should have used the SyQuest
EZ-135 instead. It runs (is) at HD speeds and comes in an IDE
configuration. Works great on an 8-bit, too! Got mine for $135, new. Of
course, they don't make 'em anymore!!! Damn!!

Some later 800 XLs had version C Basic. I've heard that some 130XEs have
a ROM in which the self-test can test all 128K of memory. Then there's
the XEGS with its built-in Missile Command...

1910. Wild & Wacky Atari Auction (Update #1)

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-23 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970223030600.WAA05929@ladder02.news.aol.com>
Source record: 75515

The WILD & WACKY ATARI MEMORABILIA AUCTION #1 (Update #1)

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
Everything has been tested except the Intv carts.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March 8th.

One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

1917. Re: TECHNA-VISION ALERT

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-24 00:00:00 UTC
From: rmax99@ix.netcom.com
Message-ID: <5er4qp$r2g@dfw-ixnews12.ix.netcom.com>
Source record: 75390

Greetings from American Techna-Vision. Some Atari users with a long memory will recall our 1984 ads declaring an ATARI PARTS BONANZA. And indeed we had the largest stock of Atari replacement parts on the planet (and we still do).
Now I know that this is an Atari newsgroup, and that plenty of my customers have moved on to join the mainstream PC world, however you used to love purchasing our replacement parts to build you own computer. So for those of you who have the technical skill or desire to construct their own POWERFUL 486DX-66 IBM COMPATIBLE PERSONAL COMPUTER, consider the following offer:
We just received a huge shipment of NEW first quality 486DX MOTHERBOARDS. The MOTHERBOARD usually is the second most expensive item inside a PC after the HARD DRIVE. These boards are complete with AMIBIOS version 486DX ISA. They are configured to run the popular 486DX-66 CPU's that are available at a very reasonable prices from INTEL, CYRIX or AMD. Board can also run the 486DX-33. If you change a crystal, you can run a wide variety of older 486 CPU's. In short, these boards are tested and ready to run with the addition of 30 pin SIMM memory and CPU.
The motherboards are complete with installation manual, and for those who require it, we can include detailed instructions. Boards have 7 ISA slots. The good news? ISA cards are VERY inexpensive right now.
Now for the price:

OPTI-486 MOTHERBOARD . . . . $43.95 ea. Or (2) for $79.00

For quantities over 100 pieces call for pricing.

These boards would be an excellent use for those CPU's, RAM etc, left over from upgrades. So, if you would like to build a computer for hundreds instead of thousands, consider our offer. Oh, by the way we still have plenty of Atari parts.
Power Transformers for 800/400/1200XL/1050/XF551 etc . . . $4.50 ea.
Power Supply for 800XL/600XL/130XE/XEGS . . . $7.50 ea.
13 Pin Serial cable (SIO), 3 feet . . . $1.50 ea. Or (10) for $10.00
Replacement mechanic assembly for 1050 . . . $9.50 ea.
Printer Interface for all 8-bit models . . . . . .$9.95 ea.

Hello,

I'm trying to upgrade my old 1200xl into a usable machine. I've already done the CLEARPIC mod, even added a switch to toggle between color and mono for 80 columns. Now I want to install an internal BASIC in it. So I need an XL or XE OS ROM (28 pin) and a Revision C BASIC ROM (24 pin). If anyone has any of these to sell or a DEAD XL or XE please email me.

Thanks,
Justin

I have two original copies of Alternate Reality (City and Dungeon).

However, when I boot up with disk 1 (US Doubled 1050), I always get the
FBI agent.

I'm running disks 2 and 3 from the APE Emulator.

Do I get the FBI because the US Doubled 1050 or because disks 2 and 3 are
running from an emulator?

What am I missing? Thanks.

1921. Problem with 130xe

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-24 00:00:00 UTC
From: Remco <remco@cairo.nl>
Message-ID: <33119D65.35DE@cairo.nl>
Source record: 75394

Hi,

last saturday I found a Atari 130XE on a market. I plugged it in and the only thging on screen was 'Testing rom' with two bars horizontally, and below it 'Testing Ram' with after a while 16 blocks per line.

I have left it for about an hour to see what happens, but it starts all over again. I tried 'booting' from a game module (Joust), but the same happened. The only key working is the reset button, which does what it should do.

I opened the box to see if there was missing something, but the mainboard is apparently covered by a metal plate, which I really didnt want to remove that moment, mostly because it looked untouched and brand new. I have no experience AT ALL with atari computers (I was a speccie myself!) and there were no manuals included.

I have two questions:

Does anybody know if there are online manuals available on the net about the 130xe
--and---

Does anybody know what the problem could be.

All help appreciated.

pls reply to: remco@cairo.nl
as my news-access is very limited.

Remco

Subject: NEED HELP WITH ACE C...
Newsgroups: comp.sys.atari.8bit
Summary:
Keywords:

Hello fellow Atarians... :)

I've only been using ACE C for a few days now, and I love it... I think. I'm trying to get a C function to pass a string to an assembly routine. I fumbled around with the "asm" statement first, the DOCUMENTATION BEING WRONG about its use, since it says you must open up the function with "$(" when in reality it must be omitted altogether. Now I'm wondering how I can pass a string containing a filename to my Assembly routine. I've tried many things, and none of them have worked. I'm getting the impression that maybe one CAN'T pass strings to asm functions, although for the time being, I refuse to believe this. PLEASE SAY IT AIN'T SO! I'd hate to think one could obly pass little old integers. :)

I guess Atari is starting to dump the Jag's. I found this at Surplus Direct's web sight.
They usually only sell computer items, so I was rather surprised to see this there. I don't have a Jag, but I guess that would be a good deal. About $18 each for games, and would get the jag for free.
Through typical advertising hyperbole, they call it a Interactive Multimedia System.
Oh well.
http://www.surplusdirect.com/

Jeff
Jaguar 64-bit Interactive Multimedia System
<Picture: $52.88>Includes 3 Free Games!
<Picture: Jaguar 64-bit Interactive Multimedia System>

Enter Quantity:

System Requirements: This is a TV game. It has an adapter that plugs into cable ready (Coaxial cable) TVs. S-Video or composite input TVs will require an additional adapter.

If you're seeking the ultimate in interactive multimedia game play, Jaguar is the system for you. Interactive electronic entertainment for your home is achieved by the power of 64-bit RISC technology. Rich, vibrant graphics. CD-Quality digital stereo sound. And an expandable future you'll never outgrow! The Atari Jaguar will take you into the future of digital home entertainment. An expanding library of new and exciting software experiences takes full advantage of the Atari Jaguar's powerful 64-bit technology. Peripherals allow system expansion to support popular CD formats like CD-based games, audio CDs and CD+G. Do you think you're ready for the ultra-realistic, blood curdling, high intensity action of Jaguar? Lets find out! Key Features Include:

•64-bit Graphics Chip with multiple RISC processors •16.8 Million Colors provide super-realistic video motion •CD-Quality Sound in 16-bit digital stereo •3-D Graphics offer fast, furious and realistic animation •High Speed Rendering is faster than 850 million pixels per second •Digital Interface Port is capable of supporting emerging digital standards

This Package Includes:

•The Atari 64-bit Interactive Multimedia System •Sleek and responsive Jaguar Controller •AC Power Adapter •Video Cable •Three fast paced, adrenaline churning games: Checkered Flag, Pitfall and Kasumi Ninja!

Sounds like the keyboard itself needs some work. I have had 2 130xe
Keyboards die on me suddenly, one was barely a week old at the time.
The problem is in the fact that the keyboard has a clear plastic
membrane circuit underneath the keys, and is very easily damaged. Or
the contacts simply don't "contact" as I found with my first XE, and
had to completely remove the keyboard and strip it down to clean the
contacts (which took me 3 attempts to get the damned "H" and "J" keys
working).
Anyways, from what you describe, the XE "boots" directly to "SELF TEST
MODE", which means that either the OPTION key is stuck, or the

keyboard circuit is faulty. What you should get when you turn it on is a BLUE screen, and in the top left corner there should be a "READY" prompt (providing you don't have any cartridges installed or a disk drive connected, and the OPTION key is not pressed).
As for Joust not working, try moving the cartridge around a bit when you turn it on. I have a hell of a time getting any cartridges to work on either of my XE's, it seems the slot is very sensitive and the cartridge must be in "just" the right position.
One way to see if the keyboard is at fault is to remove it from the motherboard, and boot it then. If you see the blue screen and "ready" prompt then of course the keyboard is in need of repair, or replacement.

Good luck..
Steve.

Russ,

Remember, Steve Jobs left Atari and started Apple in 1976, the Atari 400/800 were specifically designed by Atari to beat the Apple][e. What the Apple][lacked in graphics and sound it more then made up with SLOTS!!! Something the Atari's seriously lacked, yes it is true that a few OS boards came out, a few different RAM and RAMdisk boards and even 2 80 column cards (one with color RGB for that matter) I ever recently looked at a photo of what might have confirmed rumors that a long time ago someone designed a 300 baud modem for an 800 slot. These slot however were installed sideways and weren't ever truly taken advantage of. Atari also lost its sight as for what computer it wanted to compete against and instead of producing a 1200XL with more features and better expandability and slots, detachable keyboard, it decided to go after the Commodore 64 and started producing inferior versions of the 800 with little more then cutsy bells and whistles thrown in. Away went the best feeling keyboard, away went the slots, away went the future.

Curt

The interrupt process pushes 3 bytes onto the stack. Thus if S were $FE, the
stack would just have wrapped around and you would already be in deep sh--.
Adding code length to handle something that has already gone bad
somewhere else is never a good idea, and is downright bad in an interrupt
handler.

1935. Memory Upgrades for the 800

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-24 00:00:00 UTC
From: Anthony Bufort <ajbufort@mail.sas.upenn.edu>
Message-ID: <331214EC.2C74@mail.sas.upenn.edu>
Source record: 75408

Can someone please give me a quick education about what memory upgrades are worth buying for my old Atari 800 w/48k?

I'm putting a priotity on breadth of usability and compatibility. By this, I mean an upgrade that will be usable by as many programs as possible, and one that can even, if possible, allow my 800 to run 64k programs which were meant for the 800XL but couldn't run on the 800 only because of lack of memory (and NOT OS-incompatibility issues.)

I would like something above 128K at the least, but it has to be something I can make the most of.

Some of the above-referenced programs I have in mind are...

Envision (I'd like to make use of it's 130XE feature which allows for multiple fonts to be in RAM at once.)

Superscript (meant for the 800XL, but can I get it to work on my 800 with additional memory?)

ICE-T XE (will it work with a memory upgrade on an 800?)

Thanks in advance,

Tony B.

>Oh well.

Atari initially referred to it as an "Interactive Multimedia
System" or something similar. The didn't call it a game machine.
This was when it was first released, and was only available in
NY and LA. (I think it was late '93, or was it '94?)

They might have called it a game machine later.

Was one of the RAM blocks red? Usually you get the self-test screen on
power up because of a bad RAM chip. Pull the metal shields and test the
temperature of each RAM chip with your fingertip. The hot one is usually
the bad guy. If you can't identify the RAM chips, you need a tech.....

I have a few of these cartridges, no manuals though. I'll let them go
for $5.00 each plus $1.00 shipping.

Fixed that. ROMCRC-32 now is a DOS 2.5 executable binary. Please e-mail
me to receive the 559 bytes long(!) executable.

Greetings,

Sidney Cadot

Hi,

> For single density you could try using a program called
> ANADISK, which can read an Atari S/D disk on a PC 360k drive, but I
> have yet to see it read from a 1.2mb drive.

I have done it -- although I was unable to do it with Anadisk 2.07 - it somehow
failed while resetting the floppy disk controller. After switching back to Anadisk 2.05, which is still floating round the net, this problem disappeared and I can now read single density floppies without too much trouble.

There is however one subtle point to this: it was necessary that the Atari floppy was formatted SD on *both* sides, since an unformatted B-side somehow confused Anadisk.

After DUMPing the image, as described in the Atari 8 bit FAQ, I used DEANA.COM to make the dump-file into an XFD image.

Hope this helps,

Sidney Cadot

FYI

Cyan Engineering was the name for the Atari group in Grass Valley that
R&D work. Not too much in the 82 timeframe except for "ERIC" wich was
the 800 point of purchase display hooked to a Laser disk.

Umm.... I think I know who this may be?

Did you by any chance write the 5200 O.S., 850 O.S.
5200 Missile Command, and later a Lynx game?

jj

I may need those ATARI plates :)

1944. C000-CFFF in Atari 400/800

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-25 00:00:00 UTC
From: Sidney Cadot <sidney@ch.twi.tudelft.nl>
Message-ID: <33123985.5581@ch.twi.tudelft.nl>
Source record: 75417

Hello,

As I have no access to an Atari 400/800 machine, can anyone out there
please tell me what's in the area from $C000 to $CFFF?
"Mapping the Atari" claims it to be ROM, "not completely empty; it was
apparently used for system development in Atari's paleozoic age".

This is a statement which I find fascinating to say the least :-)

Greetings,

Sidney Cadot

1945. PAL Atari XL/XE timing

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-25 00:00:00 UTC
From: Sidney Cadot <sidney@ch.twi.tudelft.nl>
Message-ID: <331238C4.631E@ch.twi.tudelft.nl>
Source record: 75418

Hello,

Recently I've been doing some timing on two Atari PAL systems, an XL
and an XE system. I have found the following:

* 105 cycles / horizontal trace period
* 312 cycles / vertical trace period, of which 240 visible and 72
blanked

giving a total of 312x105 = 32760 cycles / vertical trace period

Assuming this to be correct, I have found that these PAL Atari's 6502
runs at 1.63 MHz, which is much slower than the 2.11 MHz that my copy of
'Mapping the Atari' gives.

(of course I have timed with interrupts & DMA off, just measuring raw
processor speed).

Is anybody able to confirm or deny these results?

Greetings,
Sidney Cadot

>Just my 2c worth.
>
>Steve.

How to make an XFORMER batch file: (My method)

1. Rename xformer.exe to something else (i.e. xf36.exe)
2. Create an xformer.bat and add the following lines:

```
@echo off
xf36 -j -s -8 -n -a %1 %2 %3 %4 %5 %6
```

"@echo off" is optional.
xf36 is xformer's executable.
-j enables joystick support.
-s enables sound.
-8 automatically enables atari8bit emulation
-n automatically disables basic
-a skips startup screen

It is important to put the %'s in there, as stated.

Now, to run xformer, you can run "xformer [disk image]" (w'out quotes)

F11 brings up the disk switching menu.

(I know this cuz I own the manual for 3.0. I bought it before I
heard of XLit...)

Nothing useful is there.
You can add in boards to put something there tho - Omnimon, the
Impossible! and a few others. A lot of companies made RAM boards for
it.

Yes, Thomas. A shell account is an account where the programs are started
on the provider computer. You only see the ASCII-output. All you need
is a modem and a terminal program. But don not ask me which german provider
allows shell account.

Tony, you pass a pointer that refers to the string; that is, it
contains the location of the string.

Also, check out cc8, it's a pretty major enhancement of ACE C.
Uses the same libraries and runtime code.

Alot of the 8bit super users have 256k or more. Some of the guys even
have though 1 meg XE monsters. So a faster data transfer rate could work
with a RAM upgraded 8bit, but for practical purposes I can't see it
happening..

Remco,
Check to see if the START key is stuck down! This would make it
boot without BASIC. When you just turn on the 130XE without a disk
drive and NOT holding down any keys, you should hear some noise for a
couple of seconds then see thre "READY" prompt on a blue screen. If you
type DOS then press return, you will then get the RAM test screen.
Check your keyboard. You may have to open the case to be sure the
keyboard is connected correctly and that the traces on the film sheet
(within the keyboard) is clean and all traces are good. The keyboard
circuit sheet could be damaged from maybe some liquid that may have
been spilled inside. Make sure the computer is completely disconnected
from everything before you open the case. Take a damp (not wet) c=loth
and clean both sides of the keyboard curcuit sheet. Check all of the
black rubber pads on the bottom of the keys to make sure there is no
debris or metalic particles. Be sure the all parts are completely dry
before you reassemble the computer then try it again. It should work
properly after this. Do this is only of you can't get it working from
outside.

There are are a couple of ways to do this. I have a program (also available at the Umich Archive) called IMY which will copy a file into a .XFD image (sorry, at the moment it doesn't do .ATRs. I'm trying to get the author to rewrite it to do multiple moves and .ATRs). I will e-mail you a copy. You then run the .exes from the ATR as if it was on a real Atari. No BASIC and load from DOS.

1963. 800XL Memory Test

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-25 00:00:00 UTC
From: ceegbs@cee.hw.ac.uk
Message-ID: <E65ttH.98o@cee.hw.ac.uk>
Source record: 75436

Last week I was given an 800XL, when I booted it up I was greeted with a memory test screen, with the ROM test giving 2 long yellow bars and the RAM giving lots of red and yellow dots. Can someone shed some light on what this means. The computer refused to do anything after this, pressing reset just went back to the start of the test, and help had no effect at all.
I would take it that I have faulty memory in the machine. How easy would it be to replace? Can the chips still be obtained easily enough?
Is it worth a shot at repairing, or does someone here want the bits?
I was also given a little box called a graphix AT, it has a peripheral connector on one end and a box with DIP switches and a centronics connector on the other. It it just a printer adaptor? or something more than that?

Thanks for the help,

Gavin

>
> Greetings,
>
> Sidney Cadot

No idea where it maps to, but the actual ROMs in the 400/800 are only 10k -
one 2k and two 4k. 2K is the chips mapped. OmniMon fit nicely into $C000,
adding great functionality (editor, monitor etc).

I'm a little confused. I thought the only difference between an ATR/XFD disk image and the actual disk was the image header. I have used APE to copy an image from my PC "virtual drive" (Drive #1 on APE) to a floppy on my Atari's 1050 drive (Drive #2 on APE) with no problems whatsoever, and then used the floppy version of the disk image, which booted and ran flawlessly.

Is this what you're asking about?

: dozen Jaguar games and NO MORE ever to be created?

You are wrong. There are about 50 (? - did not count, but a friend of mine has 47) games on carts and CD. And the new ones are coming out. Few games are to be released (or have been released) this year. For more info see http://www.telegames.com/ and other Jag sites.

Bottom line is - for about $120 for the console and CD and for $10-$15 a game (esp. for games like Tempest 2000, Battlemorph, Iron Soldier) Jaguar is a great value regardless of wether the new games are being produced

Hello, I'm having a bit of a problem downloading stuff from my shell
account using Kermit-65. Everything will be going fine up until I leave
my vt100 emulator and load up the Kermit and give the Receive command.
After Receive is given the kermit lists some RS.... errors.
Hmmm, also, when I load Kermit it tells me that the 850 is not
responding, is that importmant? Everything else seems to work fine and
then its as if it isn't communicating with the other computer or something...
I'm using an Atari 800xl(256k)
Atari SX212 1200 baud modem
VT100 emulator
some Kermit-65 program for Atari
and a basic ascii/text freenet accounct which supports
kermit and zmodem. I've only got kermit...

thanks for your help

I think he means that he doesn't use the SIO2PC cable, and needs a way
to convert the image files into floppy's using only the 8-bit
computer, or a program to run on the ST which can convert the
ATR/XFD's into something usable on the 8-bit.

I wrote a program called DiskFormer that is available at umich or
on my page at one of these:
http://ourworld.compuserve.com/homepages/ken_siders/atari.htm
http://home1.gte.net/ksiders/atari.htm

It will convert an ATR or XFD image to an actual disk (as well as
some other options), but it only works with standard Single,
1050 double, and double density sizes. You must have a disk or
ramdisk large enough to hold the ATR or XFD file which is bigger than
the disk it will create. At the time I wrote it I didn't know what
all was in an ATR header so it just looked at file sizes to determine
the density. It probably wouldn't be too hard to add support for
non-standard sizes.

Wrong. There are somewhere between 35 and 50 games for the Jag (at least
6 of them are cdrom.) Last one I heard about came out in Nov-Dec 96 timeframe
if I remember correctly. At least 3 more scheduled for release in the first
6 months of 97. Its slowing down but not done yet. go check
rec.video.games.atari if you want the titles or further info. BTW, you
can get a jag from Bits of Fun for something like $29 new or $20 used.

Hello, I have a big box of Atari up for grabs. It contains an 800XL, a 600XL, 2 5.25 drives (one with WarpDrive), a couple of printers, a modem, and a cassette tape drive. There is quite a bit of software including the Zork series, Hitchhikers GTT Galaxy, and other Infocom titles. Last I checked everything worked. $100.00 o/bo takes it.

Hmm... no pride to swallow... just a litte bit of ignorance :-((
I did a posting some months ago about M.U.L.E.
Even on a XL/XE you can play with THREE players: player 1 using a
joystick on the 1st joystick port, players 2 and 3 using PADDLES (1
MegOhm resistors) on the 2nd joystick port; the 4th player is played
by the computer.

>Unfortunately, the Commy has inferior music (3 voices instead of 4),
>and the earthquakes no longer occasionally move a mountain...

You see, no C64 is needed, Atari is simply better! :-))
Although they both blew it! :-(((

1982. Various Alternate Reality info

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-25 00:00:00 UTC
From: mgfrank@cyber2.servtech.com
Message-ID: <5eveiv$ju4@cyber2.servtech.com>

Those of you having problems with Alternate Reality might want to try a different set of disk images. You can get emulators and disk images at any of the various AR web sites, one of which is listed below. You can also play the game with a clear conscience, since Phil Price has made the old AR games freely available (but not public domain).

I say "the old AR games" to distinguish them from the *new* AR game. Yes, that's right, Alternate Reality is finally making a long-awaited comeback! AR will be reborn as Alternate Reality Online, a multiplayer online RPG, slated for release in mid-1998 by Monolith Productions. Phil Price and Gary Gilbertson (who wrote the music) are heading the project. We've been assured that all the music from the 8-bit city and dungeon will make it into AROL. See http://www.lith.com/ for details. Check the "what's new" section.

There are plenty of resources available for the AR fan, including a number of web pages. http://www.pacificone.com/sean/ is the one I remember the URL to off the top of my head. It has links to all the others, as well as disk images and emulators to play them on.

There's also a mailing list for discussion of AR old and new. You can subscribe to it by sending a message to majordomo@myst.slcc.edu with "subscribe arlist" in the body; the subject is unimportant. Some familiar names read and post to it.

If you're on IRC, be sure to check out the #alternate-reality channel on EFnet. irc.ais.net, irc.gate.net, and irc.voicenet.com are some servers you can try.

Incidentally, I'm not affiliated with Monolith, I'm just a really excited fan. :-)

Hope this helps!

If the copy protection test on disk 1 of AR:D fails, you get attacked
by 'The long arm of the law' or something like that. Very cute.

Krieg's Klassic Karts Auction #2

**************************************************************************
* This auction will take bids until Feb. 28th. Then it will transition *
* to a Going, Going, Gone phase. Updates will be sent to participants *
* daily by e-mail. *
* *
* Thanks for your participation! *
**************************************************************************

Overview of the contents of this auction:
Atari 2600 66
Atari 5200 8
Atari 7800 4
Atari 8-bit 4
C64 6
Colecovision 1
Intellivision 20
Sega Master 1
Paper goods 19
Hardware 5

Minimum bid increments
.25 - 5.00 .50
5.00 & up 1.00

Shipping is extra.

Trades are also welcome. I collect many classic systems. Trades may cause
some items to be removed from the auction.

Mail all bids and offers to krieg@execpc.com.

Correct me if I'm wrong, but don't ALL the ICs in an 8bit get "hot" afte
rthe machine has been on for awhile. Or do you mean the "hottest" ram
chip is the culprit?

Wait a minute - just what is wrong with wrapping the stack? Since no
program should be using the stack except in indexed mode, it doesn't
make any difference where the current stack pointer is. The only
possible problem is if you need to use more than 256 bytes on the stack,
but even then the starting and ending points are arbitrary. When I use
the Atari Assembler, the stack pointer is initialized to 0. This means
that the first byte pushed onto the stack is stored at $100, and the
next byte is stored at $1FF. There's no problem with that.

WOW!! The greatest game really is going to new heights!
I had often pondered whether AR would ever make a comeback, and this
is exactly how I pictured it. And to include the original music- well,
how could they make it any better than the original soundtrack. This
is certainly something that has been well awaited, and well worth the
wait.

Thanks for the info. I can't wait to see how it all turns out.
Steve.

: with your 8-bit Atari?

Not at the present time, but it is the solution I've used before I built
my APE cable to transfer files to the 8bit. I'd just hook up the 300
baud modem to the Atari and phone line and dialup my account, sign in,
and use xmodem to transfer files from my account (that were gathered
from yogi's site or whereever) to 8bit Atari floppy. Boy, I forgot how
slow 300 baud is :)

Well, now with the APE cable I can presumably connect thru the net with
my Atari at 28,800 kbps :)

Personally, nowadays, I think it's just easier to build the PRO cable and
grab files off the net with the PC and then transfer them directly to the
Atari disk drive.

Regards,
John

>

Actually... I use version 1.21 (1.22?) and it has no problems with staying at 19.2 if I connect at 19.2 HOWEVER, it has problems with when I connect at 14400... Since I want to still talk to the modem at 19.2 and it drops it to 1200...

Can anybody actually point me to version 1.23? I can't even find it on Bob Puff's BBS here in Rochester...

1996. Re: ATR2DISK.COM??

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-26 00:00:00 UTC
From: Deana Barrett <pwein@umich.edu>
Message-ID: <3314E658.5B2B@umich.edu>
Source record: 75329

You can easily transfer ATR images of Atari disks to real Atari disks by using a connector cable between your PC and your Atari disk drive. The cables are known as 1) APE cable, 2) SIO2PC cable, 3) XFormer cable

The first two cables do not require the use of an emulator program. Instead, they use their own file manager type program. They are all Shareware products available in working versions.

If you are willing to build / purchase a cable then you will be able to convert your .ATR images. However, if you did build the cable, then there would be no real need to convert the .ATR image to an Atari disk. THe same shareware software would allow your PC to act as a huge hard drive for your Atari.

I hope this gets you more interested ....

1997. sio2pc problem!

Content-Type: TEXT/PLAIN; CHARSET=US-ASCII
Content-ID: <Pine.SUN.3.95.970226204334.18140B@linet01>

This Sat will be the first combined OHAUG and LIAUG user group meeting.
This will quite possibly be the largest Atari user group meeting currently
running in the United States. Directions follow. This first
meeting of four that are planned for this year will have on disply some
rare hrdware items and the showing of films taken directly from Atari
corp.

The meeting is again this Sat at 12:00 in Plainview N. Y.

The address is:
999 Old Country road
Plainview, N.Y. 11803

Directions:

From the north:
Take route 95 south and head for the Throgs Neck Bridge
After crossing the bridge proceed straight ahead to the Long Island
Expressway exit east.
Follow to the Seaford-Oyster Bay Expressway south.
exit at the Old Country Road exit and head east (left at traffic light)
the Library (Plainview-Old Bethpage Public Library) will be on your right.

From the west route 80:
Take route 80 to the George Washington Bridge. Follow the Cross Bronx
Expressway (route 95 north) to the Throgs Neck Bridge and follow the
directions from the Throgs neck above.

From the south:

Take route 95 (New Jersey Turnpike) to the Gothels Bridge exit (east)
Follow the signs to the Verrazano Narrows Bridge and keep to your left on
the bridge to exit onto the Belt Parkway. Follow the belt onto the
Southern State Parkway and follow that to the Seaford-Oyster Bay
expressway (exit 28AN) and follow the Seaford Oyster Bay expressway to
the Old Country Road exit. Make right follow to Library

The meeting is in the basement of the Library...

Any questions Please E-Mail me before Midnight Friday EST

Thank you for your attention...

Patrick J. Mulvey
President of LIAUG.

: Its a real pity that no-one has written a program yet that will
: actually convert ATR/XFD into DCM or a real disk.
: There was a program written in BASIC that someone posted to
: alt.binaries.atari that would convert an ATR/XFD into a real disk
: using the 8-bit, but is very slow due to BASIC, and seems to have
: problems with creating a proper copy of the image. I could have a go
: at cleaing the process up and speeding it up too, if you like. If you
: could mention what hardware you have: like 2 disk drives maybe? and do
: you have 400/800/XL/XE? It'd be much easier if you have 2 drives
: and/or 130xe or expanded 800/XL to be able to load the entire ATR/XFD
: into memory.
: Or I could just convert whatever software to DCM for you, I don't mind
: a bit of hard work :)

My friend has a 48k Atari with a 810 and 1050.
I could lug down my 800XL and double density drive if need be.

But you should probably just make a 48k programme that works with 1 or 2
drives.
OH,and make sure to ask the user WHICE drivers,since he may have a hard
disk as drive 1 or something.

Source record: 75335

RBJ (rbjones@therighside.demon.co.uk) wrote:
: Ive downloaded some .exe files from the Jellystone Park archive. How
: do I get them to work through an emulator?

: I use Rainbow and can only use .atr files with it, but most of the
: files I have seen are in .exe format.

This is a OBJ file,called COM by SpartaDOS and DOS XL.
(not to be confused with CMD files)
It contains a machine language (ML) programme.It can be used directly by
Xformer,but you also need to load a DOS to access it.Xformer comes with
MYDOS45.ATR (or something like that) so just type
XFORMER MYDOS45.ATR filename.com
where "filename.com" is a ML file of a game or what not.
Make sure to de-activate BASIC (shift-F9) and switch to 800 mode (F10)
and use DOS "L" command to load the file.
Use "2" to look at drive 2 since "filename.com" is the second thing on the
command line.
To load;
L2filename.com
where "filename.ext" is the filename you see listed on 2.
Note that DUP (the menu you're using) will automaticly print a RETURN
after you press "L" or any other command,for that matter.
You can have up to 8 or 9 drives.
You can put any file on the command line.If it'sd a ATR file,it will look
like a disk with files.If it's any other file,it will look like a disk
with one file on it.So the file may be a ML (COM or OBJ) programme or a
BASIC programme or a text file.

: I havent been able to get .atr files to work with Xlit or Xformer -
: how come? The screen either just goes corrupt or says remove cartrige.

You have to press shift-F9 to disable the BASIC "cartridge".
You may also have to switch to a older OS using F10.

: Does anyone have a copy of the Atari 800XL SYSTEM ROM? I havent seen
: it around anywhere - I have the 800 SYSTEM ROM which works fine
: anyway.

It should come with Xformer.

: Im new to Atari Emulation. So, which is the best emulator? I have a
: copies of Rainbow 95, Xlit, Xformer. Never seen Xlit or Xformer
: actually run something yet though.

Xformer is good for BASIC programmes or programming languages that use the
OS like BASIC or Assembler/Editor.

It's because you need to specify wildcards in the filename for D2

ie: [C]opy D1:*.EXE,D2:*.*

because of the lack of a filename (or wildcards) for D2:, MyDOS has to
use the default drive to write to, which is D:

I'm pretty sure this is correct, but if anyone else knows
why...........

Memory chips on the 800xl are on the left of the motherboard, 8 64kx1 chips.
They're fairly cheap.

And the Graphix AT is a printer interface; the DIP switches let you select
the type of printer and some of the print options (line feed etc)

hi !

i could do some screenshots but just for games
which are running under Xformer 3.60/xl-it because i have
no tv-tuner-card in my pc.
so probably that's not the help you awaited.
anyway, let me know if you are interested.
i am currently working on an emulator database for xl/xe
games.

bye, sven.

2014. MyDos Question/problem

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-26 00:00:00 UTC
From: Jim Klein <jklein@isd.net>
Message-ID: <33143CEF.7690@isd.net>
Source record: 75466

I'm using a few different emualators and am having a problem with MyDOS
on all of them.

I have mydos45d.xfd as d1: and an blank atr disk as d2:

When I press C to copy and type...

d1:sp*.exe, d2: (copy d1:speedway.exe to drive 2)

It then says copying "d1:speedway.exe d:speedway.exe"

But, as you can see, it does not goto d2: as I've specified... but
instead goes to d:

what am I doing wrong or is this a bug?

I found out that if I assign d: as d2: then it
says copying "d1:speedway.exe d:speedway.exe" but in reality it goes
to d2:

P.S. Is there a homepage for MYDOS?

-thanx-

>
> ICE-T XE (will it work with a memory upgrade on an 800?)

Axlon 128k Ramdisk would be best for compatibility purposes considering
many ramdisk programs were made to run with that upgrade (like some of the
Syn-Series application software) I think there was a Newell 288k (or
something 288k for an 800) but like you said alot of the EXTRA ram
software was desigfned for Xl/XE Os, so the extra ram might not help.
Envision and superscript (if it the one I'm thinking of) are old enough to
work. But ICe T XE I haven;t used and I am guessing it is XE OS specific.
Somebody correct me if I'm wrong!

Yup. Also, they're pin-compatible with the 256Kx1 used in older PC
motherboards. You just won't see 256K unless you install an upgrade
kit; which, if you get the XL working, you might want to do :).

Kurt,
You actually want you system set to 19200 and let the modem just do its thing. It will work just fine at 14400. I've done this on probably 1000's fo occasions. I use BTM 1.21 via my MI/O 256K. Never had a problem!

2023. Re: Soft from "Rush Hour"-Party 97

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-27 00:00:00 UTC
From: nadkar <nadkar@zeus.fh-pforzheim.de>
Message-ID: <33160738.6A20@zeus.fh-pforzheim.de>
Source record: 75345

we haven't put our winning intro there yet...

for "r34lly unr34l"-intro look at

http://www.uni-karslruhe.de/~Marek.Tomczyk

on the atari pages and in the demo-corner...

a short description of demos on the yoshi-server

there are 2 intros of MEC in the folder...
(1 is a "joke"-intro, 2nd is a "real" intro...)

and there are 4 diskx.dcm files there... this is the
winning demo from polynomials... so you have to depack them

1st i thought these are all presented files on copy party but
this is just 1 (!) demo... after depacking you should
name the discs A,B,C,D...

on the A-Disk there is a file called "journey.com"... but beware
its a BOOT-Disk!!! so boot this disk and insert the others when
the demo tells you to change the disks...

but after loading you may be suprised and disapointed...look yourself...
...and you have been warned... ;)

HeAvEn/Taquart

ps. the new homepage takes just a little bit more time for publishing
on the web...

you will find on the page follwing informations:

- illegal opcodes of the 6502-cpu (which are working... ;))
- all antic-opcodes
- informations about my demos/intros
- general "demo"-stuff
- screen-shots of my intro

2024. CD in PC Mirror under APE

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-27 00:00:00 UTC
From: jeking@xmission.xmission.com
Message-ID: <5f3tqs$1if$1@xmission.xmission.com>
Source record: 75346

Now that I've finally figured out how to change into a directory under APE's PC mirror function, how do I move backwards?

Doing a UP. doesnt work.. I know for a while there, it did, and I could see an UP directory, but under SpartaDos, forget it. Once you're in a directory, you're stuck there. I usually have to set the drive back from within APE itself.

Are you running the software on your PC? Is it configured for your cable (1 chip or 2?)
Have you run the tests described in the docs?

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

Message-ID: <331625C6.4EF7@zeus.fh-pforzheim.de>
Source record: 75351

if you want some nice demo (well it has no great effects...)
from BEWESOFT... go to the homepage of Mr. Tomasz Tatar
it was released from famous bewesoft at christmas 96/97

Big Atari 8bit Home Page (by Tomasz Tatar)

http://student.uci.agh.edu.pl/~tatar/Atari/hp.html

and go to the ftp-server where you can find the xdemo...

this demo is very large in my opinion but it has a great
random-generated music-player!!!

you can enter a four digit-number and a style number and its funny...
all numbers are sounding great!
its like the worms game-level-editor... ;)

and the text from bewesoft (10 years of atari history) in the
demo is wonderfull... read it...

publish your favorite "xdemo-music"-codes here!!!!

bye HeAvEn/Member of Taquart

>--
> The Doctor

You can call a USR function if you have a PLA ($68) as the first byte
in the machine language code you are calling into use. It will then
proceed with the code until an RTS ($60), which then returns you to
BASIC. I think I will have a go at modifying a program I wrote a few
years back to include ATR/XFD file conversion. This program I wrote to
convert Multi-Menu files into DOS files, and also can convert disks
into files. All I have to do is add a reverse procedure of the disk
converter, but it may be a little more complicated than it seems. I'll
keep you posted...

Steve.

There is usually a file called "up" which you have to load from DOS
which will take you back one directory. One thing I have found is if
you have more than 64 files (or 128 for SpartaDOS?) in the PC mirror
drive, then you only see that amount and the rest are inaccessable.
This may account for the loss of the "up" file. Try making more
directories that contain only up to 64 files (including Sub-Dir
names).

Another point, SpartaDOS will only load a file if the extention is
COM, so typing "UP" will not do anything. Add a fullstop to it like
this: UP. the fullstop makes Sparta "load" the file even tho it
has no extension. For Sparta to load any files other than "com", you
have to type in the full filename, but for files without an extention
adding the fullstop is the only way.

>--
> The Doctor

noted....... The hard part will be working out use of a single drive
system. With the ATR's being rather large files, I don't know how
swapping disks will go with having the ATR file "opened" for read.
Maybe the "note" and "point" functions will help in that respect, but
I haven't had much use of these commands. We'll see what happens....

my emulator..

can someone email one to me?

P.S. Why does everybody seem to use single density disk images?

-thanx-

2035. VSS 0.70

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-27 00:00:00 UTC
From: dan.boris@coat.com
Message-ID: <857065090.27564@dejanews.com>
Source record: 75357
Cross-posted to: comp.emulators.misc,comp.sys.atari.8bit

Announcing VSS (Virtual Super System) V0.70
an Atari 5200 emulator

copyright 1996/1997 by Daniel Boris (dan.boris@coat.com)

VSS is an Atari 5200 Super System emulator for MSDOS. The current version runs about 80% of the
ROM images I have almost flawlessly, and at a reasonable speed even on a 486DX2/66. On a Pentium
system the emulator gets close to, or better then full speed on a lot of games. To use the
emulator you will need a copy of the 5200's 2K BIOS ROM, and 5200 ROM cart images. Due to
copyright reasons, I cannot provide these.

The following games run almost perfectly:
Pac-man,Ms. Pac-man, K-razy Shoot Out, Frogger, Frogger II, Jungle Hunt
Astrochase, Berzerk, Blue Print, Centipede, Defender, Gorf, Gremlins,
Kaboom, Missile Command, Super Breakout, Star Raiders, Space Dungeon

What's new in V0.70

- Sound support for Sound Blaster (Using Ron Fries Pokey Library)
- Horizontal and Vertical fine scroll
- About 20% faster (with sound turned off)
- Fixed keypad bug (Star Trek now works)

The current version of the emulator supports:

- 16K or 32K ROM images.
- 2 joystick emulated through the keyboard
- 1 joystick emulated thourgh the mouse or joystick.
- All keypad and trigger buttons on controller are emulated.
- Configurable frame rate.
- Integrated debugger and disassembler.
- Sound.

The current version does not support:
- GTIA modes 16,17,18 (Title screen to Ballblazer)

You can find the emulator on my homepage at:

http://www.geocities.com/SiliconValley/9461/emulate.htm

>2. Where can I get it?
>
It's called Ice-T. I beleive it is freeware, available from
atari.archive.umich.edu or other ftp sites. But don't expect anything
like Netscape or even Lynx for the 8-bit. What it is, is an 80-column,
VT100-emulating terminal program which you can use with a shell account
and a fast modem (up to 19200 bps). Most other 80-column programs for the
8-bit (other than the well-named FlickerTerm) have difficulty keeping up
with speeds above 2400.

Well, I did determine that there was a problem with the assembly routine I was trying to pass control to, but I have not as yet confirmed that strings can be passed (or for that matter, pointers to them.) With Atari stuff, though I love it and have a sentimental attachment to it as well, I have learned to not take anything for granted and wait for the 'empirical evidence' to come in. :)

|>

The gist of the original post was that a PC was/will not be available.
I want to be able to convert an ATR file on my Atari 8 bit hard
drive to a floppy disk - no PCs involved - no emulation - just
the "real" stuff.

Don't own a PC - don't need one - got a 130XE, 1040STe, and
a PowerMac - I can download to the Mac, transfer the ATR files
to the 130XE hard drive via CSS's IBM reader program and a 3.5"
modified XF551 - now all's I need is a fast and reliable conversion
program.

Check the pinn outs on the sio end this is the most common mistake when building an SIO2PC cable. remember you are looking at the pinn outs of the computer not the cable. to see what i'm talking about plug the cable into the SIO port and then check your pinns comming out of the cable end.

The serial connector pin-out (on the computer)

```

Do you know how much they paid for Atari INC? JTS isn't a house hold name
qwhen it comes to HD.. where did they get the big dollars, unless Atari
was sold for like $50,000..

Diging through some boxes came up with an ATR 8000, NO POWER SUPPLY ECT1
MAKE OFFER SHIPPED SHIPING APPROX $6.00..

Supra 2400b Modem power supply..works fine...cheap..shipping $4.50..

Atari 1050 Disk Drive $15.00 shipped..

CARTS.400 OR 800..USE
K-Star Patrol
K-Razy Kritters
Gorf
Make offer shipped...

Cartridges
400-130XE Useable
Missle Command
Defender 2 ea
Donkey Kong
Eastern Front 1941
3d Tic-Tac-Toe
Space INvaders
Star Raiders..
No documentaion Carts only...make reasonable offer with shiping inc..

Atari Systems Light Gun..Offer

Antique...Atari 830 Acoustical Modem with Power Supply..Works

Supra 2400b Modem..with power supply works fine..

Percom Disk drive..

Indus Double Density Disk drive..

Rana Double Density Disk Drive..

Disk drives come with power supply and sio cable..

20mg Hard Drives MFM type cheap shipping/h $5.00 due to weight..Work
fine on Atari 8-bit for back up ect.. these are 1/2 height drives.
Make offer on any or all..

Shipping and handling not negociable due to the weight of some items

What you can do is create a file exactly 130048 bytes long and name it
blank.xfd. With your emulator, format it as an enhanced density disk.
If you really need it in .atr format, then you can use one of the ATR <-> XFD
convertors.

2048. 1200 bug with High Speed modem and Bobterm

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-28 00:00:00 UTC
From: lblack1051@aol.com
Message-ID: <19970228011200.UAA07970@ladder02.news.aol.com>
Source record: 75271

In response to the individual having Bobterm who a 1200 connect on their high speed modem, yes there does seem to be a problem. I have seen many people refer to this once the higher speed modems were designed and released. More often than not, it seems to be localized to SOME P:R: connector useres. Reason I say some is that there actually were two version of the P:R: manufactured and released. Another bug that seems to be prevelant on the P:R:, is the screeming Q's. The work around for the screeming Q's is to disable the break key interrupt. Some programmers know about this and incorporate the break-key-disable within their code (as I did with Atar-Z-Modem).

2051. Wild & Wacky Atari Auction (Update#5)

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-28 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970228043700.XAA22834@ladder02.news.aol.com>
Source record: 75274

```
Wild & Wacky Atari Auction (Update #5)

Rules and stuff:
----------------
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
Everything has been tested except the Intv carts.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March 8th.

One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

One some sites there is an utility out called Imageman.
This allows to extract files from and move files into ATR files.
It also can create single or enhanced density disks.
SIO2PC has this ability too. You have to create a "RAMDISK" and then
save to harddisk.

Matt

P.S. The "Imageman"-program still resists in Version 0.3 now for a long
time. I don't know, who developed it, but I think it's really useful and
aading some functins and clearing some little bugs would be very nice .

>P.S. Why does everybody seem to use single density disk images?
>
>-thanx-

I guess that the overall majority of games were produced in single density.

I know that in my user group (this may be hard to believe, but true) there are still some members who use only 810 drives. We do our newsletter and most of our library disks in single density because it's the lowest common denominator. Sometimes I have so much content for the newsletter that I wish I could go to DSDD, but only a few of us can handle that!

But getting back to single density vs. enhanced, you have to realize that lots of the game houses were reluctant to produce software in enhanced density until they could be convinced that a significant part of the installed base was using 1050 drives.
There was also a controversy regarding Atari's putting out a 3.5" floppy drive. Remember that the total 8-bit installed base was small at that time, and the software houses balked at having to produce Atari software in different media. What irked many of us was that a short time later, Apple came out with the IIGS (and later the //c+) that both used 3.5" media and the same software houses didn't squalk.

: modified XF551 - now all's I need is a fast and reliable conversion
: program.

Take a look at the following web page and download the ZIP file containing
utilities. One of these is called IMG2DISC.COM and will do what you want.
(i.e. convert images to disk on your atari 8bit):

http://www.kawo2.rwth-aachen.de/~matz/atari/msc/index.html

(I think the ZIP file contains an ATR-image, so you need somebody
to transfer this one image to your atari 8 bit. But then all others
images could be converted directly on your atari 8bit.)

Hope that helps...

> Memory chips on the 800xl are on the left of the motherboard, 8 64kx1 chips.
> They're fairly cheap.

So where do you find out stuff like this? I have several Atari systems (130XE, XEGS, 800XL, and an 800) and would like to know where to find internal hardware documentation. All my systems work fine with the exception on the 800XL, which comes up with a dark screen with a few scan lines of color at the very top. No audio either. I am suspecting GTIA or Antic, yet I don't know which chips these are. I do have some spares available and since Atari was so gracious as to socket all the chips in my 800XL, it would be a simple task to try to swap a few. Please let me know if you have any info. The chips in my machine are labelled on the motherboard with U3, U4, U7 ... , etc. Thanks for your time.

James,
Use CWD (Change Working Directory). To move up one level use "CWD ..". Note the space between the CWD and the "..". The is required. To move up to the Root level use "CWD >".If your complete path is D2:>GAMES>ADVNTURE>TEXT and you are currently at the ADVNTURE level and want to go down to the TEXT level use CWD TEXT. Notice that there is NO need for the > if you use it you need to put in the entire path, as I listed avove (CWD >D2:>GAMES>ADVNTURE>TEXT). This will allow you to move to any directory. It is similar to, but not quite the same as MSDOS. The SpartaDOS X version is a little bit closer to MS-DOS than the 3.x version.

2064. FS: Atari 8-bit games on disk

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-28 00:00:00 UTC
From: pope@rrwilson.ucdavis.edu
Message-ID: <5f7e4q$2fi$1@mark.ucdavis.edu>
Source record: 75287

Hello Atari 8-bit enthusiasts!

I have the following games for the Atari 8-bit line of
computers for sale. All of these are on disk, and with the exception
of the ones so indicated, all come complete with their original packaging
and instructions (no box means no box or instructions). Due to the age
of these games, I have tested each of them to confirm the integrity of
the media. I am asking $3 per game, plus shipping, but I am willing to
negotiate, especially for large orders. I would be particularly
interested in an offer for the lot. Email me at
pope@rrwilson.ucdavis.edu with your order!

- George Pope

Hi Dan,

You may want to call B&C Computervisions, they should still sell Atari Field Service Manuals for most of the Atari computers and peripherals, give them a shot. 408-986-9960

2067. XL-it 0.18

Newsgroup: comp.sys.atari.8bit
Date: 1997-02-28 00:00:00 UTC
From: Markus Gietzen <magi@stud.uni-sb.de>
Message-ID: <331744BD.5629@stud.uni-sb.de>
Source record: 75290

Hi !

You can download XL-it! 0.18 from:

http://myst.slcc.edu/~markus

The major changes are the support for 8 DD drives and
support for virtual harddrives (H1: - H8:) to access your
PC-directories.
For more details check the CHGLOG.

Due to limited time I wasn't able to work on the gfx and
collision-detection bugs. Next release...

Have fun,

Markus Gietzen

I agree here, there quite a few games out, and there is still a few
coming out once in a while... This will continue for a while because,
if you look at the LYNX for instance, there are still new games coming
out for that every few months, and they are 5 years older than the
jaguar!

Yes you can do that, but I like to know how fast my modem has really
connected... When dialing in bobterm, when you hear the modems starting
to connect, just tap return, and that forces bobterm into terminal mode
(without changing the baud rate) and you can see the full connect string
from the modem when communications are established.

> at 19.2 and it drops it to 1200...

I thought BobTerm just looked at the first digit of the baud rate to
determine DTE speed?

3 = 300
1 = 1200
2 = 2400
4 = 4800
9 = 9600

thats why I thought that when i connected at 14400, it would see the
and think it was supposed to go to 1200, but you are saying that if
bobterm receives a "19200" from the modem, that it does in fact stay at
19200? ive never tried that.. ive always just tapped return before the
final connection.

Markus has done it again!

Thankyouthankyouthankyouthankyou!!

Gettting ATR's working correctly is wonderful. And the virtual
hardrives will make me rethink my archival scheme. The sound is
great. The emulator works under win95 again. The atari key makes
life easier for anyone doing any development using the emulator.

In general an outstanding refresh.

Thanks again!

Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, MonoChrome Monitors, Monitor Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials.

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

2074. 6502 undocumented opcodes

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-01 00:00:00 UTC
From: Trevin Beattie <trevin@xmission.com>
Message-ID: <33182719.3DB8@xmission.com>
Source record: 75297

A while ago I was looking for information on the undocumented opcodes
that Atari computers use, and I had several good responses. However,
even the best sources has missing and/or incorrect information. I've
done a lot of research on them and have a set of corrected tables for
reference, which would mainly be of use to people writing emulators.

Here's a corrected copy of the newsgroup article posted last August. My
other tables are still in WordPerfect format only, but this one has most
of the information.

Subject: Re: ?: illegal op codes 6502
From: fe@koma.free.de (Frank Ellert)
Date: 1996/08/24
Message-Id: <4vment$otc@koma.free.de>
References: <1996Aug21.080025.671@tora.RoBIN.de>
Organization: die Kommunikationsmaschine
Newsgroups: de.alt.folklore.computer

Note: The following table has been modified from its original version to
match the results I got from my Atari 800 computer, and to correct
some of the more obvious errors (byte counts, addressing modes,
omissions and transpositions.)

-----8<-----
6502 Opcodes and Quasi-Opcodes.

2075. Re: CD in PC Mirror under APE

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-01 00:00:00 UTC
From: jeking@xmission.xmission.com
Message-ID: <5f9lqsqrq1@xmission.xmission.com>
Source record: 75298

I ORIGINALLY SAID:

: >Now that I've finally figured out how to change into a directory under
: >APE's PC mirror function, how do I move backwards?
: >
: >Doing a UP. doesnt work.. I know for a while there, it did, and I
: could

YOU SAID:

: James,
: Use CWD (Change Working Directory). To move up one level use "CWD
: ..". Note the space between the CWD and the "..". The is required. To

Geez! Please read the message thoroughly.. I've been using Atari's with SpartaDos since time began! I was looking for APE specific help, not SpartaDos help.

Thanks though, but I really dont need an elementary education! Someone previously posted that if my CD contained more than 64 files (which it does), I could not use the CD UP. command to recurse directories under APE, as the "U*.*" files would not be shown.

Markus you've done it again. Thanks for fixing the sound routines.
Xl-it now recognizes my sound card which also allows the joystick.
Yesssssssss!

: >--
: > The Doctor

: noted....... The hard part will be working out use of a single drive
: system. With the ATR's being rather large files, I don't know how
: swapping disks will go with having the ATR file "opened" for read.
: Maybe the "note" and "point" functions will help in that respect, but
: I haven't had much use of these commands. We'll see what happens....
```

It shouldn't be a problem.

AtariDOS/MyDOS don't mind you taking the disk out of the drive even when a file is open.Though it'd be a good idea to put it back in before you write to the file.

SpartaDOS's problem of flushing the buffers when the wrong disk is in the drive is irelavant since you're opening the file for READ.

And if you happen to put the wrong disk in at the swap-prompt,AtariDOS will give you error#164 rather than try to read the file from the wrong disk. (MyDOS may do this with 90k and 180k disks,as well.SpartaDOS has no way of performing this check,though)

2081. XF551:how fast is it?

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-01 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us
Message-ID: <5f9o65$5bk@login.freenet.columbus.oh.us>
Source record: 75304

Well everyone knows that the XF551 was supossed to have a "super-speed"
like the US Doubled 1050,but that it used a different protocol.

But I read in the FAQ that it only went at 32000bps (38400?),instead of
the USD1050's 53200bps.

And there were supossed to be european drives that went at 72000bps!!!

Robert Smith Ely (rely@ix.netcom.com) wrote:
: Check to see if the START key is stuck down! This would make it
: boot without BASIC. When you just turn on the 130XE without a disk
: drive and NOT holding down any keys, you should hear some noise for a
: couple of seconds then see thre "READY" prompt on a blue screen. If you
: type DOS then press return, you will then get the RAM test screen.

START boots the TAPE drive.
(which is different from BASIC's CLOAD and LOAD "C:",which are different
from each other as well)
OPTION boots without BASIC.

And BYE is the proper way to enter the self-test mode.
(DOS starts up the programme you booted.Normally this would be the DOS
menu but it could also be a term programme booted from a modem(!))

From the DOS menu,choose "run at address" and enter the address E471 to
enter self-test mode.

: >should do.

I always found it funny that people call it booting since the cartridge is
not being loaded by the computer but by manual labour.

"module"???
This is the Atari,not a Texas Instruments TI-99!

: >I opened the box to see if there was missing something, but the
: >mainboard is apparently covered by a metal plate, which I really didnt
: >want to remove that moment, mostly because it looked untouched and brand

Those are a job to detach.

: >myself!) and there were no manuals included.

A "speccie???

: >I have two questions:
: >
: >Does anybody know if there are online manuals available on the net about
: >the 130xe

Any manual about a Atari XL or XE should help.There're all pretty much the
same.The FAQ is posted to this group every so often.

: >Does anybody know what the problem could be.
: >
: >All help appreciated.
: >
: >pls reply to: remco@cairo.nl
: >as my news-access is very limited.
: >
: >Remco

: >

: Sounds like the keyboard itself needs some work. I have had 2 130xe
: Keyboards die on me suddenly, one was barely a week old at the time.
: The problem is in the fact that the keyboard has a clear plastic
: membrane circuit underneath the keys, and is very easily damaged. Or
: the contacts simply don't "contact" as I found with my first XE, and
: had to completely remove the keyboard and strip it down to clean the
: contacts (which took me 3 attempts to get the damned "H" and "J" keys
: working).

I was so happy to be getting a 130XE (even if it wasn't as pretty as my
1200XL) and was bitterly dissapointed by the membrane keyboard.
(covers over by the ersatz keyboard)
If I wanted that,I would have just bought a 400!
I swear,Ataris just kept getting cheaper and cheaper.

: Anyways, from what you describe, the XE "boots" directly to "SELF TEST
: MODE", which means that either the OPTION key is stuck, or the

If the OPTION key was stuck,he would get the self-test menu of tests,not
the memory checker.Unless START was stuck as well.

: keyboard circuit is faulty. What you should get when you turn it on is
: a BLUE screen, and in the top left corner there should be a "READY"
: prompt (providing you don't have any cartridges installed or a disk
: drive connected, and the OPTION key is not pressed).
: As for Joust not working, try moving the cartridge around a bit when
: you turn it on. I have a hell of a time getting any cartridges to work
: on either of my XE's, it seems the slot is very sensitive and the
: cartridge must be in "just" the right position.

Another example of newer=cheaper. (the same applies to VCRs)
No doors for the cartridge port.Nor for the cartridge itself,for that matter.
The Nintendo is far worse!

: One way to see if the keyboard is at fault is to remove it from the
: motherboard, and boot it then. If you see the blue screen and "ready"
: prompt then of course the keyboard is in need of repair, or
: replacement.

If you value your sanity,you'll get a 800XL and a Rambo XL upgrade.

My only problem is that I use long filenames for the archives on
my IOmega ZIP drive. The virtual hard drives make it a breeze to
access the drive BUT win95 returns a ~ in the filenames. The bad
thing is that this key doesn't exist on the 8bit! Is there any way
to fix this? Maybe convert the filenames to LongFN^1.EXE or something
so i can keep my long filenames?

Will Fisher

Hello there,

Just a quick message to let you all know that I have changed Internet Service Providers.

Therefore, the URL for my On-Line Atari Software catalog has moved to:

http://planeteer.com/~rsmith/atari.htm

and my email address has now become:

rsmith@planeteer.com

If you have any problems accessing the new site, then please let me know.

I apologise for any inconvenience this causes, and for any delay in answering mail sent to my old mailbox.

Best regards,

Richard Smith.

2099. Atari XL Graphics Questions

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-02 00:00:00 UTC
From: mauricem@phonewave.net
Message-ID: <33191ebe.465261@nntp.sierra.net>
Source record: 75315

Hello everyone,

I recently acquired a 1200XL and have found that I've forgetten quite a but about the 8bit Atari's since I parted company with mine a decade ago. I'm a little rusty on some of the graphics capabilities, so if anyone can point me to a FAQ or site which has the information I'm after, I've be very grateful.

A couple of things I'm looking for...

1. Am I correct in recalling there were 4 players and 2 missiles?

2. How many players/missiles could appear in a horizontal line?

3. How large are the players? I recall 8x8, but seem to recall tricks that could "stretch" them to the full height of the screen.

4. Since players and missiles are single color items, can HBI's be used to change the palette on eahc line of the player?

Thanks in advance.

>A couple of things I'm looking for...
>
>1. Am I correct in recalling there were 4 players and 2 missiles?

4 players (8 pixels wide), 4 missiles (2 pixels wide).

>2. How many players/missiles could appear in a horizontal line?

No restriction, aside from the hardware limit of 4 players and 4 missiles total.

>3. How large are the players? I recall 8x8, but seem to recall tricks
>that could "stretch" them to the full height of the screen.

The players and missiles are always the full height of the screen. I
think a player is just an array of 256 bytes, one byte per row. There is
no built in vertical repositioning, just horizontal -- to move the image
around vertically you have to redraw it inside the player's byte array.

>4. Since players and missiles are single color items, can HBI's be
>used to change the palette on eahc line of the player?

Yup.

2103. ATR file format?

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-03 00:00:00 UTC
From: sidney@ch.twi.tudelft.nl
Message-ID: <331a16f8.1938911@news.tudelft.nl>
Source record: 75226

Hello all,

Could anybody tell me where to find the format of the 16-byte
header of the ATR images? I think I understand the basic format, but
while looking for 'official' specs I bumped into old messages of
people mentioning a checksum, as well as 'custom' extensions to the
standard that the APE filesystem claims to use.

Can anybody shed light on this please?

Regards,
Sidney Cadot

PS if you've seen a similar message to this one before: that's because
I think the previous one didn't make it out of my modem... Therefore
I've posted it again (beter safe than sorry & stuff...)

Excellent job Markus! I was playing Return
of Heracles for hours! The user interface
is much better, and it runs under Win95
again.

It's the Best Atari 8-bit emu out! It just keeps getting
better and better...

Mike

Just type 'UP.' to move to the parent directory. Omit the CD command.

Let's not let the whiners about copyrights spoil it for all of us.
Yogi come back, Steve stay with us. To all you who have a problem
with copyright violations.... shut the hell up unless it is YOUR
PERSONAL copyright that is being violated. Those who hold the
copyrights to the old 8-bit software obviously don't even give a rip,
WHY THE HELL SHOULD YOU??? Waaa waa waaa. I sit here and laugh at
your pathetic attempts to pretend that the Atari8 is still a viable
commercial platform AND that YOU are somehow self appointed knights of
the realm of the land of milk & honey. It isn't, and you ain't. You
know who you are. You need to see a shrink, not rag on people in
here. You suffer from an ego deficient syndrome or something. Go
save your private fantasy world, leave the common one that we all
share that is called reality alone.

Thank you.

MUCH RELEVENT & GOOD ADVICE DELETED

Also consider, on the outside, that whoever the machine belonged to
before may have been a power user, and had the OS ROMs re burned so
that the OPTION key at bootup has the opposite effect. He should,
just for the hell of it, hold in the OPTION when he boots up, to see
if he then gets the built in BASIC.

Cheers,

Jon

Cross-posted to: rec.games.video.nintendo,rec.games.video.sega,rec.games.video.3do,comp.sys.cbm,comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.sony,rec.games.video.cd-i,comp.sys.ti,comp.sys.tandy,rec.games.video.classic

I have just added 108 new game screen shots for the Texas Instruments TI 99/4a computer and Radio Shack Color Computer to my WWW site. This brings the total number of ORIGINAL screen shots on-line to 1483, for the following systems:

Atari 2600, Atari 5200, Atari 7800, Colecovision, Mattel Intellivision, Magnavox Odyssey2, Emerson Arcadia 2001, Bally Astrocade, Atari 8-bit computer, Commodore 64 computer, Commodore Vic-20 computer, Texas Instruments TI 99/4a computer, Radio Shack Color Computer, Tomy Tutor computer, 3DO, Sony Playstation, SMS, NES, SNES, TurboGrafx-16 / TG CD / Duo, Sega Genesis, Nintendo 64, Sega Saturn, Atari Jaguar, Philips CD-i, and Nintendo Game Boy.

More will be added as I have time. Eventually, I will have my entire collection on-line (hopefully before the turn of the century :)

Next, I'll probably finish up the Atari 7800 section.

If this is of interest to you, the URL is listed in my sig.

Michael

P.S. And before anyone else asks; if the game isn't on one of my FS/T lists, it isn't FS/T :)

> >2. How many players/missiles could appear in a horizontal line? You used a TI-99/4a,
didn't you? ;-)

> No restriction, aside from the hardware limit of 4 players and 4
> missiles total.Which is only some kind of a limit. You can use a little trick:
Set one or more ANTIC-interrupts in your display-list and write
a litte routine to change the horizontal position of the players.
remember, they range all over the screen. If you do this excessive,
you'll end up with some dozens of players with a limit of 4 or
5 in a horizontal line...

I don't think so, but the question really belongs in comp.sys.atari.st.
It's my understanding that Atari laser printers used the CPU in the ST
computer to do a lot of the work that is normally done by the printer's
CPU.

Atari made a direct from memory to printer Laser printer for the ST. You can't interfase this with an 8-bit. Hoewver I've seen and have an HP laserjet printer driver. This means that you can interface a Laserjet to your 8-bit with a normal parallel printer cable. The Atari laser printer used the ACSI (ST parallel) port not a regular printer port.

CS/A 6502 Gecko Computer
Hardware (diagrams) and Software on the Web!
(c) 1997 Andr&#65533; Fachat

http://www.tu-chemnitz.de/~fachat/csa/gecko/index.html

In 1989, after my first semester at university, I made the first line on
the schematics for a small self-designed and self-built computer. This
computer, based on the 6502 CPU, has until 1992 become a small computer
system.

The Gecko computer is now presented, including CIRCUIT DIAGRAMS on the Web(!)
and software. It is conformant to the CS/A system and has some quite nice
features:

* A fast serial RS232 interface, using the 16550 UART with FIFO,
known from the PC world.
* A serial IEC bus interface to the Commodore C64 and VC1541
* An interface to infrared LEDs to remote control devices like
CD player or TV sets
* A small keyboard interface
* Up to 30 kByte ROM and 32 kByte RAM, with up to 2 kByte fully
decodable I/O space
* Bus interface to standard CS/A peripheral interface cards

Software that is completed is:

* Multitasking OS
* Filesystem for the Commodore VC1541 disk drive
* Multitasking shell with I/O redirection, including a machine
language monitor (running over a serial line)
* Device for infrared control

Later there will be:

* A TCP/SLIP implementation to mount files from the PC via serial
line and SLIP protocol
* Let the filesystem allow accesses from the serial IEC bus - to
access files on the PC from the C64 for example.

: Just type 'UP.' to move to the parent directory. Omit the CD command.

The same problem exists. If I type .UP on a disk that contains more than
64 files, the UP. program doesnt exist.

Source record: 75243
Body handling: Inline uuencoded payload not displayed: IMG2DISK.ARC

I hope that all who need this program can download it okay.
For those who use their Atari's to access WEB sites, now you can
easily convert ATR/XFD files to a real floppy. It's written in BASIC,
and does NOT require Turbo Basic for speedy transfers. I think you
will be pleasantly surprised when you see how it works, considering
it's under 3k in length. It should work on any Atari computer without
any hassles, and doesn't even need extra RAM to run. Also caters for a
single drive system (disk swapping seems to work no problems).And
automatically will copy a Enhanced Density image, but make sure to
format a blank disk in this density first.
Please test it out, and let me know if there are any bugs or if you
think something else is needed.

Have fun...

Steve.

Looks like the only solution is to make subdirectories for the
"mirror" drive, and keep the number of files under 64 for each one.
Maybe using alphabetical order would be ok.
Like this:

MIRROR_PATH/A
MIRROR_PATH/B

etc etc. I found this the easiest way to store a heap of files on a
16mb MyDOS image, and also makes them easier to find too.

Larry, on an unrelated front... are you still active on the (I think)
FIDO Atari8 echo base? Any chance of somehow getting the stuff from
FIDO in here, and perhaps the stuff from in here in FIDO? I used to
read the FIDO echo all the time, but local BBSs have been dropping
like flies since internet access has gotten so popular. While I do
really enjoy this newsgroup, I do miss the good ole FIDO conference
also. Lots of good stuff in there.

2124. 800 OS

Newsgroup: comp.sys.atari.8bit

From: idavis@comland.com
Message-ID: <857425757.23152@dejanews.com>
Source record: 75247

I have an 800 that just sat there when I turned it on. After popping the lid off, I noticed that it was missing the OS board. I assume it is the OS board. It is in the same slots as the memory boards. Does anyone have this board for sale. I would like to get this 800 running again, but don't have access to a spare board. Maybe someone has an 800 with something else dead, and doesn't mind parting with the board, or just selling me the non working 800. I don't need this tomorrow so it's not a super hurry, I just am trying to get an idea on whether or not I can get this one going again.
Thanks in advance.

It used an ST or Mega ST as a host to do all the page processing which was
then fed to the printer via a DMA box. The printer had no brains, just the
engine. Totally useless without an ST although at one time you could buy
a box to connect it to a PC. That was years ago though.

: It's because you need to specify wildcards in the filename for D2

: ie: [C]opy D1:*.EXE,D2:*.*

: because of the lack of a filename (or wildcards) for D2:, MyDOS has to
: use the default drive to write to, which is D:

: I'm pretty sure this is correct, but if anyone else knows
: why...........

What the!?!
If you left out the filename,it will assumes "*.*".
Why would lack of a filename cause it to write to a different drive.
Just try "CD1:speedway.exe,D2:".
(of course a RETURN character will be automaticly inserted after "C")
You might want to chnage the filename to capital letters with
"CD1:speedway.exe,D2:SPEEDWAY.OBJ".
(what's a EXE file???)

Then you can just run it with "LSPEEDWAY.*".

It's free!

: 2. Where can I get it?

The umich FTP site.
Gopher to gopher.freenet.columbus.oh.us and choose option 15,and then 9
and then 6.That will get you to the ST site.One of the ST
directories,oddly enough,actually contains Atari home computer files!
(odd because the Atari ST is totaly incompatible with the Atari Home
Computer System(HCS))

Message-ID: <331C95E7.59BC@compuserve.com>
Source record: 75176

Sorry if this is a dumb question, but.....

I'm just now looking into an Atari 8-bit emulation package for my PC. I have tried the shareware versions of Xformer and Rainbow, but I would like to try some actual programs (O.K., games) before buying anything. I think I understand how to use the various disk images, but I downloaded some files with .EXE extensions and I was wondering if anyone could give me a clue how to use them. I can't seem to figure it out, and I haven't seen anything about .EXE files in any FAQs I've looked in.

Thanks in advance...

Matt

: >
: It's called Ice-T. I beleive it is freeware, available from
: atari.archive.umich.edu or other ftp sites. But don't expect anything
: like Netscape or even Lynx for the 8-bit. What it is, is an 80-column,
: VT100-emulating terminal program which you can use with a shell account
: and a fast modem (up to 19200 bps). Most other 80-column programs for the
: 8-bit (other than the well-named FlickerTerm) have difficulty keeping up
: with speeds above 2400.

Because Kermit-65 has flow control,it can actually keep up with speeds
faster than Ice-T can.And Kermit-65 is SLOW.Also,Ice-T doesn't turn on the
RTS line,so it won't work with buffered modems.You'll have to download
Kermit-65 as well and run it before you run Ice-T.
(and you'll have to run it again if your modem interface loses power)

argument
-to USR().
-The point is that you can't use USR to call OS routines.
-And the XIO command is too limited and there's no SIO command.
-(and yet there are useless commands like GRAPHICS)
---
- The Doctor

You can do this, though:

Poke your sector numbers in $30A, $30B
Poke the Read command $52 into $302
Set all the other ones.....
Have a short code PLA PLA PLA,
then JSR $E453
Then you can play with the bytes wherever you put them.
I think there is a program example like this on my page (you know, i
dont even remember!)
ftp://ftp.hackerz.com/hackerz/atari/web/index.html
```

2144. Internals of USR() function (was: Yogi's hackerz site)

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-04 00:00:00 UTC

Hi,

>You need to have three PLAs,since you always have to specify one argument
>to USR().
>The point is that you can't use USR to call OS routines.
>And the XIO command is too limited and there's no SIO command.
>(and yet there are useless commands like GRAPHICS)

You are mistaken. First, only one PLA is needed. Atari BASIC actually pushes the number of arguments on the stack, followed by two-byte entries for data supplied to the USR() function after the first argument, which is the called address. In this way, it is possible to make USR() calls which can actually process a variable number of arguments.

By the way: the USR() function returns the value which is put into the addresses 212-213, enabling you to communicate result codes back to BASIC, for example.

Using this mechanism, it is actually very much possible to call whichever OS routine from BASIC, like CIO, SIO, DISKIO, SETVBV, etcetera.

Hope this helps,

Sidney Cadot

2145. APE & Modem usage

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-04 00:00:00 UTC
From: jeking@xmission.xmission.com
Message-ID: <5fid8l$5k9$1@xmission.xmission.com>
Source record: 75184

Hmmm. I have a 386/40 running as my APE server, it has connected to COM2:
a Hayes Ultra 9600 modem.

My Atari will ONLY access that modem through APE, if I set the baud rate
(within bobterm, etc..) to the maximum of 19200. However, when I connect
to a BBS, I get what appears to be buffer overruns, because I get a ton of
dropped characters, etc..

Off the top of my head, I can think of a couple fixes: Hyperspeed handler
for my Atari, Ensure that data compression, etc.. is turned OFF on the
modem.

Can somebody help me out here? Is anybody else doing this successfully
without data loss when using the PC's modem on the atari via APE?

: James,
: Use CWD (Change Working Directory). To move up one level use "CWD
: ..". Note the space between the CWD and the "..". The is required. To
: move up to the Root level use "CWD >".If your complete path is
: D2:>GAMES>ADVNTURE>TEXT and you are currently at the ADVNTURE level and
: want to go down to the TEXT level use CWD TEXT. Notice that there is NO
: need for the > if you use it you need to put in the entire path, as I
: listed avove (CWD >D2:>GAMES>ADVNTURE>TEXT). This will allow you to
: move to any directory. It is similar to, but not quite the same as
: MSDOS. The SpartaDOS X version is a little bit closer to MS-DOS than
: the 3.x version.

uh,APE presents a disk as a AtariDOS (not MyDOS!) image.So from
SpartaDOS's point-of-view,there are no directories on the disk.
Even if it emulated MyDOS,only SpartaDOS X can access MyDOS directories.
(and disks with MyDOS intra-sector links)

And I hated the way they tried to make SDX look like MS-DOS.
You can't even access devices through SDX's command processor.
I'd prefer a SpartaDOS with a interface like MyDOS.(including CIO calls)

: >see an UP directory, but under SpartaDos, forget it. Once you're in a
: >directory, you're stuck there. I usually have to set the drive back from
: >within APE itself.

: There is usually a file called "up" which you have to load from DOS
: which will take you back one directory. One thing I have found is if
: you have more than 64 files (or 128 for SpartaDOS?) in the PC mirror
: drive, then you only see that amount and the rest are inaccessable.
: This may account for the loss of the "up" file. Try making more
: directories that contain only up to 64 files (including Sub-Dir
: names).

You have to remember that APE presents a mock AtariDOS disk to the Atari
when reading PC files.
(that's why you can't POINT & NOTE)

I think they should've made a special APE-DOS that simply relayed CIO
commands to the APE programme.Not only would this make for a small DOS,
with all the features of SpartaDOS (and more,without it having to fit into
the OS shadow memory),but it would only have the limits that MS-DOS it self
had.

I'd prefer it be MyDOS compatible since the SpartaDOS interface is just
plain weird.
(the length of the buffer decides where the current directory string and
CHKDSK packet go!This means that there's no way to tell SpartaDOS how
big the buffer is!)

Hi, i have a nice 800, 100% working, no missing keys, nice cosmetically and 1 810 disk drive which also works 100%. Also, there are power supplies for both units, an sio cable and RF cable and switchbox for hooking up to a TV. Also, 2 joysticks are included, one atari, one discwasher joystick. Everything you need to play is included...

games included are:
1 basic cartridge (for playing basic games)
1 pac man cartridge

and 12 disks
1 dos boot disk
disk games: asteroids, cest, webster, lone raider, professor IQ, zone raider, dance fantasy, pitfall II, waxworks, last star fighter (star raiders II beta), wing wars, java jim, jump man jr, arena, blue max, fort apocalypse, megalegs, mogul maniac, h.e.r.o, track n field, mr do's castle, countermeasure, frogger2, baseball, star wars, popeye, blue thunder, centipede (5200 version), q*bert, danger ranger, shamus II, spy strikes back, mr tnt, agent usa, vanguard, millipede, agent, nadral(?), spider city, money, and super zaxxon.
total 41 disk games, multiple games on a disk.

This is one great gaming system and if i hadnt just moved up to an 800XL and sio2pc, i wouldnt be selling it.

First $60 plus shipping takes it all..

In article <01bc2762$015112e0$04f7aecc@127.0.0.1>, blackat@direct.ca says...

>My only problem is that I use long filenames for the archives on
>my IOmega ZIP drive. The virtual hard drives make it a breeze to
>access the drive BUT win95 returns a ~ in the filenames. The bad
>thing is that this key doesn't exist on the 8bit! Is there any way
>to fix this?

I recall seeing a tip on my Windows Magazine CD that covers how to get Win95 to eliminate the "~" in the DOS filenames, so it is possible. Unfortunately, it is in Lotus screencam format rather than a text file, so unless I wrote every step down, it would be unlikely I could repost it accurately here.

Their site is at http://www.winmag.com. I checked it while online, but was unable to locate that tip during the 15 minutes or so I spent there.

If no one else is able to supply an answer, e-mail me, and I will run that screencam video again, take notes, and reply to you with the info.

Source record: 75259

I must say that I'm very impressed with the newest version (1.36) of Rainbow 95. On an average I have seen a 50% speed improvement on my Pentium 100 (some games run at full speed with the "every frame" setting). I also don't have to switch my color depth to 256 everytime I wanna use it. It seems that it runs more stuff now too. Now if Chris could add joystick support and fix a few bugs with the sound, Rainbow would be just as good as Xl-it! I find it funny that Emulators Inc. is working on PC Xformer 96, because if it's as good as Xformer 3.6 in emulating the Atari then it has no chance against Rainbow. Maybe they'll surprise us with an emulator that works now?

> the opcodes (for emulators).

> =

> hope it helps
> Andr=E9

Now I'm really confused! I now have four different versions of what some =

of these undocumented codes are supposed to do. For example,

LXA $AB (Sometimes called AMA)

According to VICE this performs
A =3D X =3D ANE
or A =3D X =3D (A and #M)
According to Trevin Beattie its
A =3D X =3D (A or $EE) and #M
But others have said its
X04 =3D X04 and M04
then A04 =3D A04 and MO4

Can anyone shed light on this please? Sadly I don't presently have a 6502 =

based machine to experiment with.

Operation:
X =3D (A or &EE) and #M
A =3D (A or &EE) and #M

a=3Dx=3Da or EE and x and m
Description:
C=3DLehti: =

Alternate: =

TXA and TAX have to be responsible for these.
LXA* $AB X <- (A \/ $EE) /\ M (Immediate) 2/2
A <- (A \/ $EE) /\ M

: >
: >Is there a proggy which converts them to atr files?

A "proggy"???

: There are are a couple of ways to do this. I have a program (also
: available at the Umich Archive) called IMY which will copy a file into
: a .XFD image (sorry, at the moment it doesn't do .ATRs. I'm trying to
: get the author to rewrite it to do multiple moves and .ATRs). I will
: e-mail you a copy. You then run the .exes from the ATR as if it was on
: a real Atari. No BASIC and load from DOS.

Or just use a emulator (or "PC upgrade",as we call them) that understands
binary/COM files like Xformer.You can use Xformer and DUP's copy command
to move the binary file from a MS-DOS file to a ATR.

Just type
XF DOS.ATR GAMES.ATR GAME.OBJ
(where DOS=the DOS you are using,GAMES=you ATR which holds your games,and
OBJ=the game you downloaded)
Then the game will appear as a single file on D3:.

: >(you can't just use USR() since it will corupt the stack)
: >--
: > The Doctor

Well I found a programme to do convert ATRs with.But you still need a
1050 since it's Xmodem capability won't accept CRCs.

: You can call a USR function if you have a PLA ($68) as the first byte
: in the machine language code you are calling into use. It will then
: proceed with the code until an RTS ($60), which then returns you to
: BASIC. I think I will have a go at modifying a program I wrote a few
: years back to include ATR/XFD file conversion. This program I wrote to
: convert Multi-Menu files into DOS files, and also can convert disks
: into files. All I have to do is add a reverse procedure of the disk

: converter, but it may be a little more complicated than it seems. I'll
: keep you posted...

You need to have three PLAs,since you always have to specify one argument
to USR().
The point is that you can't use USR to call OS routines.
And the XIO command is too limited and there's no SIO command.
(and yet there are useless commands like GRAPHICS)

Message-ID: <19970305013300.UAA06301@ladder01.news.aol.com>
Source record: 75193

This is a good program, indeed.

Only two things bother me. First, if docs are going to be written for later versions, it would pay to include a line about the fact that .ATRs are a little bigger than the Atari floppies they will produce. Hence, you need an enhanced density disk to download a single density .ATR, etc. But once you're using the program to convert, the disk to which the conversion will be written should be the same size that you'd expect.

Second, the program doesn't work under SDX. I haven't tried it under disk-based Sparta, BEWE Dos or Mydos yet. I'm not really a programmer, so I don't know how difficult it would be, but it would save a lot of complaining if the program was aware of all DOSs.

Beside those two objections, we're looking at a very useful program! I intend to show it to my two user groups in April (we already had a joint meeting for March.) Some of the guys are just getting on the Internet with their 8-bits and this will help.

Blackat,
Here's another thought... Simply use 8.3 filenames on the Zip disk
that has your 8-bit files, including the directory names. This works
great for me. I use Win 3.11/MS-DOS 6.22 at work and Win95 at home.
I've gotten so use to the 8.3 file name format that I still use it for
everything under Win95. Actually, I don't particularly like the Win 95
version of the long filenames. Too long. The Amiga version is better
(IHMO). The 8.3 format makes it easy for programs to do searches and
the like. The 95 long name always seem to have the stupid tilde in the
name. You'd think that if they were writing an OS that is suppose to
use long filename, they's make all of the apps (especially File
Manager) to shoe the full names. Oh well, back the the Atari 8-bit
program, already in progress.

Sniffle.

After reading this, I have one thing to say "I love you man".

Piracy didn't kill the 8-bit. Atari killed the 8-bit.

Sometimes I miss my old 130xe (my 800 blew up, and well my 800xl turned into a
wierd science experiment).

I can't describe the joy I've recently found in the emulators..

Now does anyone have a copy of "applekill"?

Thats cool, thanks for responding. As a first release I was expecting
some feedback just like this...I'm not really much of a programmer
myself, so the program does need a bit of cleaning up :)
I don't have SpartaDOS X, so if you could let me know what happens
when trying to run the program I could have a go at getting it
working. I was using SuperDOS 2.9 at the time of writing, and tested
it under MyDOS without any hassles, so I assume that it will run ok
under any normal Atari DOS as well. I'll see how it runs under Sparta
3.2g, and try to make any modifications needed (if any).

Steve.

ATARI Lives!! From one Decade to another- GO ATARI 8!!!

2177. VSS 0.71

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-05 00:00:00 UTC
From: dan.boris@coat.com
Message-ID: <857583637.13691@dejanews.com>
Source record: 75200
Cross-posted to: comp.emulators.misc,comp.sys.atari.8bit

I have just posted VSS 0.71 (Atari 5200 emulator) to my homepage:

http://www.geocities.com/SiliconValley/9461

This version fixes a major sound initilization bug that was in ver 0.70.
The sound now works for all my beta testers (where is did not before)
so this should help out anyone who had a problem with the sound.

There are also a few other minor bug fixes. Check the 5200.txt file
for more info.

2178. Troubles with joysticks

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-05 00:00:00 UTC
From: Lane Grayston <lgraysto@es.com>
Message-ID: <331DBCE0.E8B@es.com>
Source record: 75201

I have been having troubles with joysticks where I constanty have
to push the joystick connecter back into the computer because
on of the directions, or the fire button, quit working.

Is this usually the fault of the joystick connector or the
computer?

Thanks for any info.

Lane

BTW, anybody know how to get past the first few playscreens of Zorro?
I could never figure out what you were supposed to do. There's various
objects lying around, like a bottle, a couch to bounce off to get to
other levels, a plant, and a blacksmith's thingie. The only thing I
could figure out is to put objects on one platform that would make
another raise or lower.

Graham,

If you have a 1200XL, there is a quick fix for it to be compatible.
Buy or trade or get an Atari 400/800 OS board, take the ROMs from it, 2
will get stacked one top of each other and go into U13, the other ROM
will go into U12. The instructions on how to do this are on the Atari
Gamming headquarters, do an Excite or Yahoo search for their URL.

Curt

I remember finishing it about 10 years ago.... can't remember how though, but
you had to rescue the girl who appears in the window at the start screen. I
know you need the cannon ball for something though.

2183. looking for a modem for my Arari 130XE

My Atari 130XE's manual says it supports a modem, and i need to transfer some data off of it and onto a PC, and via modem looks like the best way.

Anyone want to sell me a modem? Or know of some place I could but one? I'd also need communications software for it.

(Please cc replies to me.)

Why don't you remove the internal basic? I think Basic is on an IC inside
your 8bit (can't remmber which one, but you can remove it and the computer
runs fine.. (or at least my 800Xl ran fine..)\

Alan

2187. 8bit emulator

Newsgroup: comp.sys.atari.8bit

Source record: 75210

Hi there!

With all this talk about 8bit Atari emulation on the PC has sparked my interest. I don't have a Pentium or Windows 95. Is there a decent emulator out there that would run off a 486 DX33 with 24 megs/ram??? If so, where could I get it?

I have ATMODEM.ZIP which is an Atascii emulator. It's a lousy terminal program but the Atascii emulation is decent enough to watch Atascii movies.. Now there is a blast from the past, Atascii movies. Anybody old enough to remmber watching those at 300 baud with a 1030 or Xm301 modem?

Alan

The command interpreter will only recognise long file names if you're
running a DOS session under Win95.....if you boot up in command (DOS)
mode without the Win95 shell, all of your long filenames (including
the ones for directories) will be truncated to the 6 characters,
tilde, and number.

>underbars and dashes, which is fine, but not really necessary. Can

>Ex.:"Work:DOpus/LHA_DOpus.addin.info"

Yes, you can. (But if you're booted up in DOS-only mode, it won't.)

You don't need to stick with the 8.3 filename format unless you boot
up in DOS mode often and manipulate the files that way. In a DOS
session under Win95, long filenames are supported.

Oh, my gosh! I can't believe I left that typo in there. Thanks for pointing it out. The corrected version of the tables will be available at http://www.xmission.com/~trevin/atari/atari.html. Please point out any other typos I might make.

BTW, for those who aren't familiar with the symbolics: << stands for shift 1 bit left (a math operator taken from C); >> stands for shift 1 bit right; \/ stands for bitwise logical OR (the V symbol from Boolean algebra); /\ stands for bitwise logical AND (the upsidedown V); and \-/ is supposed to be bitwise exclusive OR (originally a V with a bar going through it).

The first description from VICE is only partially correct; in fact, it
is precisely 25% correct. The third description is completely correct,
but it only describes the result for one bit, and doesn't cover the
other 7 bits.

> TXA and TAX have to be responsible for these.
> LXA* $AB X <- (A \/ $EE) /\ M (Immediate) 2/2
> A <- (A \/ $EE) /\ M

Actually, it is LDA (Imm) and TAX that are responsible. According to a
COMPUTE! magazine article I received (thanks, Geert LOOSE) the
instructions ending in 3, 7, B, and F all combine the microcode from the
previous two instructions -- in this case A9 and AA. The origin of the
EE value is unclear (as is the 07 in other instructions), and is
probably a purely Atari anomaly.

By the way, Thomas Havemeister pointed out an error I left in my last
posting. I have formatted and corrected tables available at
http://www.xmission.com/~trevin/atari/atari.html.

I did so last time and have an image here to use it with the emulators.
There is the function of Option toggled and the fast Hyper E: handler
installed.
The only thing you would not like, is that the y and z keys are changed.
(for German layout)

Matt

> rsely@dhs.state.nj.us -or- rely@ix.netcom.com

The purpose of the tilde (or the squiggle as i call it) is to provice backwards compatability with older programs. If you are using File Manager in Win95 as opposed to Explorer then I guess you have to use the old 8.3 format. Long filenames are a blessing that has been much to long in coming for Windows. You can even use them in a Dos Box while under Win95, just place the long filename in quotes: "C:\Program Files" There is a patch that lets you replace the ~ with something else I've been told, so since I never use the _ character anymore, and since it exists on the 8bit that's what I am gonna try to do. That way I can have disk names like "AR The City 1a.atr" and "AR The City 1b.atr" etc and have them show up as ARTHEC_1.ATR and ARTHEC_2.atr in XLit!

There was a guy I knew once who was real handy with the 8-bit, and he had an EPROM burner. He took a hex editor and changed the OS code a little and burned it into an EPROM & that is what I have in my system. It has been so long since I used my 800XL that I forget if I did the option thing or if I only did something else. I remember I had him do something he thought was a little strange but I wanted it... wish I knew what mod it was now. I really need to dig out my old 8-bit eqp and try it out.

If I did that, I could even probably make an image of the ROM that I have now.

Cheers,

Jon

Will,
The use of the tilde under DOS does work, but the 256 character
long names is a bit rediculous. 32 characters is more than enough to
name anything. Heck, a filename could actually be longer than the file
itself. BTW any long filename can include spaces as long as the name is
put in quotes. I don't think many people realize this and tend to use
underbars and dashes, which is fine, but not really necessary. Can
Win95 use multiple extensions like AmigaDOS?
Ex.:"Work:DOpus/LHA_DOpus.addin.info"
I seem to be a creature of habit. Since I have used the 8.3 format
since 1982, it's a hrad habit to break. I have worked with the long

names on the Amiga and under Win95. I really don care much for the shrunken version of the long filename. It isn't ver conducive to finding things in a hurry.

As for the tilde character, it can be generated from a combo key press on the 8-bit. It is ASCII character 126 which is [Esc][Back Space] on the 8-bit and it looks like a left pointing triangle. I haven't actually tried it for filenames, so if anyone tries it, report back with your results.

Hello,

Due to the recent death of my father, I have a lot of Atari Hardware &
Software that I would like to see someone use. I have attached an itemized
listing, please e-mail if you are interested.

Thanks,

Jayne

COMPUTER ITEMS:
FOR SALE
QTY DESCRIPTION ASKING PRICE
1 ATARI MEGA STE 68000, 16MHZ COMPUTER (16 BIT) 4M MEM.INTERNAL 3.5 HD 1.4 FLOPPY;
TV/MONITOR HOOK-UP; KEYBOARD & 2 MICE; EXTRA 1M MEM; 3.5, 720K FLOPPY W/ ROMS; 2 SERIAL/2
SCSI HOOK-UPS $150.00

1 ATARI, IB DRIVE EXT. 5 1/4, 360X FLOPPY $ 40.00
(EXCELLENT FOR PC-DITTO (IBM EMULATOR))

1 ATARI MONO (720X348) B/W MONITOR $ 50.00

1 120M SCSI ATARI EXTERNAL ICD HARD DRIVE $150.00
W/ICD INTERFACE & CABLES

1 ATARI SLM804 LASER PRINTER. W/DRUM & TONER $150.00
W/SCSI INTERFACE & ALL CABLES

1 MIGRAPHS (LOGITECH) ATARI HAND SCANNER $ 80.00
W/SOFTWARE

2 SPECTRE ATARI (MAC) CARTRIDGES & SFTWRE $ 50.00

This is the perfect DESKTOP PUBLISHING setup as configured. HD has CALUMUS & PAGESTREAM;
G-DOS ~ ULTRASCRIPT; POSTSCRIPT FONTS; IMG, TIFF, GEM, EPS, FONTS & GRAPHICS. WORD PERFECT
4.1 FOR THE ST, ATARI WRITER-ST, & TEXT EDITORS. PC-DITTO (IBM EMULATOR) SOFTWARE, PC DOS
3.2, GEM 3.1 FOR DOS. MAC SOFTWARE, & MAC SPECTRE EMULATOR CARTRIDGES; ALL 10~ DISK CASES
OF SOFTWARE ??

WHOLE SYSTEM PRICE (EVERYTHING) 1ST COME $500.00

SEPARATELY PRICED ITEMS:

1 ATARI 800XL COMPUTER (8 BIT) W/PWR. SUPPLY $ 45.00

1 ATARI 130XE COMPUTER (8 BIT) W/PWR SUPPLY $ 50.00

1 ATARI 1050 DD (8 BIT) W/COVER & PWR. SUPPLY $ 40.00

1 ATARI 850 SERIAL INTERFACE (8 BIT) $ 15.00

1 SUPRA 2400 BAUD MODEM W/PWR. SUPPLY $ 10.00

1 ATARI JOYSTICK (For 8 Bit/16 Bit) $ 5.00

NUMEROUS SPARE CABLES (MODEM; NULL; ETC.) $ 2.00 ea

SOFTWARE? SOFTWARE? SOFTWARE? SOFTWARE?
(W/WHOLE SYSTEM OR SEPARATELY)

10 DISK CASES FULL: ORIGINALS, BACKUPS, COPIES, BLANK DISKS

ORIGINAL PROGRAMS $ 1.00 PER DISK

COPIES OF DISKS, UNMARKED OR BACKUPS $ .25 Ea.

They all will run on that machine, except Rainbow 95 which requires
Windows 95. Your hardware is capable of running Windows 95. The
fastet emulator is PC Xformer for DOS. The best (well maybe a tie
with Rainbow) one is XL-it for DOS. XL-it is not as fast as Xformer,
but it has better emulation.

Now for a bit of advice.... dude get yourself a 486DX-4/100 or at
least a 486DX-2/66. They go SOOOOO cheap these days. Everyone's
getting Pentiums, or at least 486DX-4/100s. There is almost no excuse
you don't have at least a DX-2/66 in that machine!

I know I know.... you'll probably reply that advice has nothing to do
with Atari, or that your DX/33 is soldered to the board or
something... Oh well.

Cheers,

Jon

2209. Wild & Wacky Atari Auction (Update #7)

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-07 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970307043700.XAA24204@ladder01.news.aol.com>
Source record: 75132

```
Wild & Wacky Atari Auction (Update #7)

Rules and stuff:
----------------
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

Dear Fellow Atarians,

My friend at work has a bunch of 8-bit Atari computers and stuff
that he wants to get rid of to someone who can appreciate them. He is
willing to let them go for a reasonable amount but would prefer to unload
the whole shebang at one go. Here is what he has.
3 800XL's
1 130XE
6 disk drives
2 monitors
3 printers
all manuals and power supplies and cables
His name is Bob Salopek and his phone # is 415-333-2165.
Please do not e-mail me as I can't help you out on this. Just call him
and negotiate directly. He has no e-mail address so you must use the
phone to contact him.

Happy Shopping

It certainly is not. 128 would be okay, I guess.

> Can Win95 use multiple extensions like AmigaDOS?
> Ex.:"Work:DOpus/LHA_DOpus.addin.info"

They're not extensions in that sense, but you can have any number of "." in
a filename you want now.

From what I hear, it's not a good idea to get it to remove the tildes,
because many programs still look for the directories by expecting it
to have the tildes. If you take them off, the progrmas might get
confused and will stop working.....

Break the 64 filename barrier? Now that's food for thought...
Can you imagine how long it would take to scroll through a directory
that has over 5000 files? (Thats approx the amount I have in a MyDOS
image). Hmm, it certainly would be nice to have more than 64 files per
DIR tho...life would be much simpler.. :)

One thing comes to mind. The difference between single and double
density disk directories. Why can't we have 128 filenames on a D/D
disk? (Sparta excluded, it already does?). I have noticed that any of
the Atari DOS's that use double density still only use 128 bytes per
sector for the DIR, even tho the sectors are 256 bytes long. This just
seems an absolute waste of usable directory space. Maybe this could be
used to increase the DIR space somehow?. If I were a decent programmer
I'd be straight onto this, but.....
Glad you brought it up Yogi, very good point..

Steve.

>And there were supossed to be european drives that went at 72000bps!!!

The XF551 does have a "superspeed" mode, that runs at 38,908 bps(NTSC) or 38553 bps (PAL). But the only ways I know to take advantage of it are DOS XE (excuse me while I puke), SpartaDOS X, or a patched SpartaDOS 3.2d. The patch is called XFPATCH, and works ONLY with 3.2d, not with 3.2c, f, g, or 3.3a or b. It overwrites the USDoubler autodetect code, so if you reconfigure your drives, you have to run the patch program again. And the patch is only for USD and XF551, not for the IndusGT.

The IndusGT drive's "superspeed" mode is about 76,000 bps according to the documentation I have (I haven't confirmed this, but I doubt it). The only ways I know to take ad vantage of this one are SpartaDOS X (the BEST way!) and DOS XL with the "synchromesh" file (I THINK that's the name).

Hope this helps.

Yer answers...

1. 4 players 8 bits wide, 4 missles 2 bits wide. OR... 5 8bit wide players!!! (GTIA only?)

2&3. All players & missles can appear on a horizontal line. All players and missles can appear on ALL horizontal lines (Just use a large definition table).

4. HBIs (Actually ANTIC DLIs) will change player color.

A footnote. If I remember right, looking at an o-scope in the past, poking 0 into a player will not only produce black, but SUB-BLACK. YES KIDDIES! All you need to do is after the last displaying DLI put in 2 DLIs. One to put a missle 1/2 of the way through the vertical blank & synchronizing line, and one to page flip to DLI & SCREEN #2, and viola! IWNOTWECROLOALC!E (interlace wow cool!).

FOR BRAVE PROGRAMMERS ONLY!!!
TRY THIS....

there should be ways to change the, or a, color by poking the hardware (NOT SHADOW REGISTERS) color registers several times along a single scan line, while using a look-up table from memory. HMMMM... Can we say HAM, or perchance at least a whack at 256 color mode (not just DLI tricks, but a whole screen generated by fiddling with the background register with ANTIC DMA off!!!)

Did anyone get an idea of what nasty tricks that can be played with our old gnarly lovable ATARI's? ;-)

2222. Atari 410 Program Recorder Help Wanted!

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-07 00:00:00 UTC
From: Jared Falvo <luposian@keyway.net>
Message-ID: <33210E1B.62E3@keyway.net>
Source record: 75145

I just bought an Atari 410 Program Recorder to dink around with (it only cost $5, so... why not?), but I can only get Rewind to work. Fast Forward barely moves the right spindle and Play does absolutely nothing. It doesn't even make any motor noise at all!

I don't have it (the 410) plugged into anything except the AC outlet.

I would appreciate any help anyone can offer, including any schematics, information, etc. related to the 410 recorder.

Please reply to: luposian@keyway.net

Thanks you...

Jared

-I am looking fowards to Ornetta 97.

You mean that this last copy party this month wasn't it?
If so, when is Ornetta 97 going to happen?

By the way, I agree with guy1015@aol.com, all the demos and intros were great, however some of the files on the ftp site were corrupted. (like the several disk demo)
All I can say is keep the demos coming, you got many 8-bitters here in America and the rest of the world looking fowards to them!!

2224. Wild & Wacky Atari Auction (Update #8)

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-08 00:00:00 UTC

Wild & Wacky Atari Auction (Update #8)

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing your package and adding $1 for materials - Priority stuff <2 lbs will be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will be accepted. I would NOT reccomend sending cash, but some people seem to
anyway. Checks will be held for approximately 1 week to clear. MO orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March 15th.
One final post will be made to newgroups. A bidder who is not on the update list may bid on a G1 item, but not a G2 item. Any raise to an item in the G1 or G2 phase will result in the item staying or returning to G1.

Source record: 75150

Hello!

I haven't ever worked on a 8 bit Atari. I have an Atari Mega 2 ST now, and, from time to time i can work on the PCs of two other people (as in the moment).

I hear that there is a lot of Atari 8bit stuff on the net, and that it keeps the platform live.

Could someone who has experience with 8bit software tell me if it is worth (i mean interesting, exciting, useful, whatever) installing an Atari 8bit emulator?

Gerards.

2228. Journey to the Planets

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-08 00:00:00 UTC
From: Matthew Haas <mthbbs@light.lightlink.com>
Message-ID: <Pine.SUN.3.95.970308122746.28251A-100000@light.lightlink.com>
Source record: 75151

Does anyone remember JV/Roklan's Journey to the Planets game for the Atari computers? It is one of my favorite games, (have the cart, box, instructions, all good condition) but I have been unable to beat the game as I have not been able to get past a certain world (the Ruby Ring planet I believe, where there is a flashy door thing you must go through, and shoot down a circle or block, and a screen where there's this boat-looking-thingy going around disappearing then reappearing) ..JV/Roklan said they had a cheat guide, but I don't think they're around anymore. If anyone has the cheat guide, let me know please!

Thanks.

2229. Game Hints, Cheats & Tricks?

On mar 8 1997 Guentcho wrote:

Could someone who has experience with Atari-8 bit software tell me if its worth it to run an emulator?

I would have to say that there's probably no substitute for the real thing. With 8-bit computers going for $20 on the net and $5 at the thrift stores, you might want to look into it. I just got a Commodore 1084 monitor with the 3 rgb inputs. If you do the super video upgrade you will be able to use the crome input. I get a picture that kicks you know what, as good as vga on any clone.
I bought PCxformer about a year ago and have yet to use it (won't run a lot of things). you're probably better off if you must with another of the emulators (Rainbow, Xl-it). That raises another question:

Has anyone gotten any of the european games to run on these emulators?
I am talking such as A.K. Avalon's Fred, Hawkmoon, Mission Shark, or Rockman (now there's a game!)

2234. Digital Streams...

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-08 00:00:00 UTC
From: Jared Falvo <luposian@keyway.net>
Message-ID: <3321CE24.2A9@keyway.net>
Source record: 75157

Is it possible to send a pure digital signal from an Atari 8-bit computer to an Atari 410 Program Recorder? As well, what modifications would be required (if necessary) in order to get the digital signal out (off the tape) without the filtering process it (the 410) has built-in (to translate an FSK signal into a digital one) getting in the way?

Any help greatly appreciated.

Jared

2235. XL-it and 133k 180k Disk Image Compatibility

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-09 00:00:00 UTC
From: knave@usa.net
Message-ID: <387cd$d017.305@NEWS>
Source record: 75069

I got the latest XL-it .018 and am totally impressed by the GUI. I had some trouble: my 133k and 180k disk images that I used with Xformer won't seem to run on it! Am I messing up somehow?

Also noticed that XL-it is running a lot faster since v. .016.

I love XL-it though I am strictly a casual user. I intend to kick in some cash for it soon (I know Markus is probably thinking "yeah right" but just wait.)

---knave

2236. Re: Soft from "Rush Hour"-Party 97

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-09 00:00:00 UTC
From: guy1015@aol.com
Message-ID: <19970309073701.CAA07509@ladder01.news.aol.com>
Source record: 75158

Hi!!

Thanks for the fast reply, There are a LOT of Atari users and I mean
A LOT of us good old 8bit'ers that love to see new graphics and sound for
the 8bit. I run a BBS in Florida (USA) and have monitor my ATARI 8bit
DEMO sig.. It seem that most users enjoy them as much as (Games).. I
get lots of feedback from users asking, "Got any new demos from Poland?"
Theres still a large group of Atari 8bit users that dont have access to
the Internet and depend on Local or even Long Distance BBS to find Stuff
to run on there 8bit. While Im not blind to the clone platform, I do
have a 586-133 :(But still my 8bit machines are #1 and will only
support the 8bit.

Im thrilled to see such Demos on Atari 8bit like "Shake/Joyride" that are
just as good as clone demos.

8bit demo coders.... Your wonderfull Demos are not invain!! and Thanks
for Showing us what the Atari 8 can do!!

2237. Atari 8-Bit Computers: Frequently Asked Questions

Reader-suggested topics, unwritten as yet: (volunteers?!)
How fast of a modem can my Atari display keep up with?
-with Ultraspeed roms?
-with XEP-80
-with any particular terminal program

What is the XEP 80?

What programming languages are available for the Atari?

What kinds of monitors can I use with my Atari?
-Color Composite with separate chroma\luminance
-Commodore 1702

-Commodore 1084/1084s(stereo)
-can be used with ST or Amiga _and_ 8-bit
-monitor cable requirements
-400/600XL lack monitor port entirely
-800XL lacks separate chroma/lumi (can be added) as 800/XE
-XEGS totally different plug (RCA jacks) lacks chroma\lumi
-XEP80 has composite monochrome

Video Upgrades
-Adding chroma\lumi to 800XL

How can I make my commercial boot disk (tape, cart)
into a load file or disk image?

What is APE?

Why does some European software (especially demos) flicker?

Subject: 1.1) What is an Atari 8-bit computer?

400 800 1200XL 600XL 800XL 65XE 130XE XE Game System

It was 1979 when Atari, Inc. entered the home computer market with the introduction of the 800 and the 400 computer systems. (The 400/800 models were first shown publicly in November 1978). These MOS Technology 6502-based systems run at a clock speed of 1.79 MHz, offering 256 colors displayable simultaneously, up to 320x192 graphics resolution and up to 40x24 text resolution in 11 graphics modes and 5 text modes. Video may be displayed either on a composite video monitor in the case of the 800, or on a standard television for both systems. 4 independent sound voices are available through the audio output of the television or monitor, each with a 3 1/2 octave range, plus there is a built-in speaker for key-click and other programmable sounds. The 800 has a second cartridge port and a full-stroke keyboard, while the 400 has a single cartridge port and a membrane keyboard. Each has 4 serial controller ports and an Atari Serial Input/Output port. Originally, both the 400 and 800 were sold with 8K RAM, but later most 800's were sold with 48K and 400's with 16K. Each includes the 10K Atari Operating System in ROM.

The introduction of the 1200XL in 1982 marks the single largest advance in the 8-bit Atari system. The 1200XL runs most software and hardware designed for the 800 and 400, but now runs a slightly more advanced 6502C microprocessor, and includes a full 64K RAM. The single cartridge and monitor ports remain, along with 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 16K Operating System offers many new features, including an alternate International Character Set.

In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL. These new machines include most of the features of the 1200XL minus the Function keys and the demo program. But now both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface, providing direct memory access to the heart of the computer. The 800XL contains 64K RAM while the 600XL has 16K RAM.

The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985. The 65XE is nearly identical to the 800XL in features, minus the PBI. The 130XE, however, offers 128K RAM, plus a few special new graphics capabilities. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface, continuing the powerful feature of direct memory access.

In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE.

Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

On July 31, 1996, Atari Corp. (http://www.atari.com/) became a division of JTS Corp. (AMEX:JTS). JTS Corporation, with headquarters in San Jose, Calif., was founded in 1994 to design, manufacture and supply enhanced-capacity hard disk drives for the notebook and desktop personal computer market. The company currently employs more than 5,800 people worldwide including manufacturing facilities in Madras, India.

Subject: 1.2) What can I do with an 8-bit Atari?

What can you do with an 8-bit Atari computer system? Virtually anything you can do with any other type of computer!

Programming? Pascal, C, BASIC, Logo, Pilot, Forth, Lisp, 6502 assembler... Plus powerful unique languages like Action! and QUICK...

Word Processing? Try AtariWriter, Letter Perfect, Paperclip, TextPro, Bank Street Writer, 1st EXLent, TurboWord, Cut & Paste, Letter Wizard, Panther, Superscript...

Database? Try TurboBase, TurboFile, Synfile, Data Perfect, MicroFiler, MegaFiler, Homebase, Super Data Base 1-2-3, Small Business System...

Speadsheet? Look at Syncalc, Visicalc, TurboBase, Calc Magic, Turbo-Calc, SAM Budget...

Communications? There's Express!, BobTerm, Kermit-65, Omnicom, VT850, Chameleon, Ice-T, FlickerTerm 80, Term80...

Graphics? Print Shop, Newsroom, Blazing Paddles, Video Title Shop, Virtuoso, Movie Maker, News Station, Publishing Pro, Awardware, Page Designer, ChromaCAD, Rambrandt...

Music? Virtuoso, Music Studio, Music Construction Set, Songwriter, Electronic Drummer, Music Painter, Music Composer, AtariMusic, MIDI-Track, Digital Music System, Chaos Music Composer...

Alternate Operating Systems? There's the Diamond Graphic Operating System; SpartaDOS X, the 64K DOS on a "supercartridge"; the S.A.M. (Screen Aided Management) 80 column Desktop System; the Ultra Speed Plus OS; the TurBoss! High Speed O/S...

Hardware? A plethora of upgrades and add-ons are available, realizing improvements in speed, memory, sound, graphics, storage media...you name it!

Education? Colorful graphics, exciting sounds and full-screen editing give rise to hundreds of quality educational software titles.

Entertainment? The 8-bit Atari has long been famous for thousands of great games.

If you want to do something with a computer, chances are you can do it on an 8-bit Atari computer. While slower than today's PC's, the 8-bit Atari is far less costly than any of these, is easier to program at the machine level or alter at the hardware level, and has been documented more thoroughly than any of the newer computing platforms. The relative simplicity in design of the 8-bit Atari also means that many people find the systems more reliable than their modern counterparts.

The software for the 8-bit Atari is sometimes more powerful than on any other platform. For example, some Bulliten Board Systems are still run on 8-bit Ataris specifically because the BBS software available can be better than that for any other type of computer. There is a reason for the relative quality of software on the 8-bit Atari. People program commercially for the latest PC's to make money; people program the 8-bit Atari because they want to -- they enjoy producing good software. It takes a team of specialized programmers to develop a major piece of software for those other systems; with the 8-bit Atari, a single person has the chance to learn the entire system, thereby developing greater pride in his programming abilities and his final product. The character of the programmer can shine through.

The 8-bit Atari owner can take pride that his/her computer platform was developed years before the IBM PC or Apple Macintosh were even on the drawing boards, but remains as useful today as it was in 1979.

For these reasons and more, the 8-bit Atari remains a popular alternative in today's home computer marketplace.

Subject: 1.3) What are the performance specifications of the 8-bit Atari?

Some of this section by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick).

Clock Speed:
NTSC machines: 1.78979 MHz
PAL machines: 1.773447 MHz

Graphics:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text
2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen modes are available.
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any line on the screen.
All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four 2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also available, as is a mode to XOR colors or blacken out colors when players overlap (good for making three colors out of two players!) Players and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution, 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was (fortunately!) rerouted through the normal audio output, and the keyclick can be disabled.

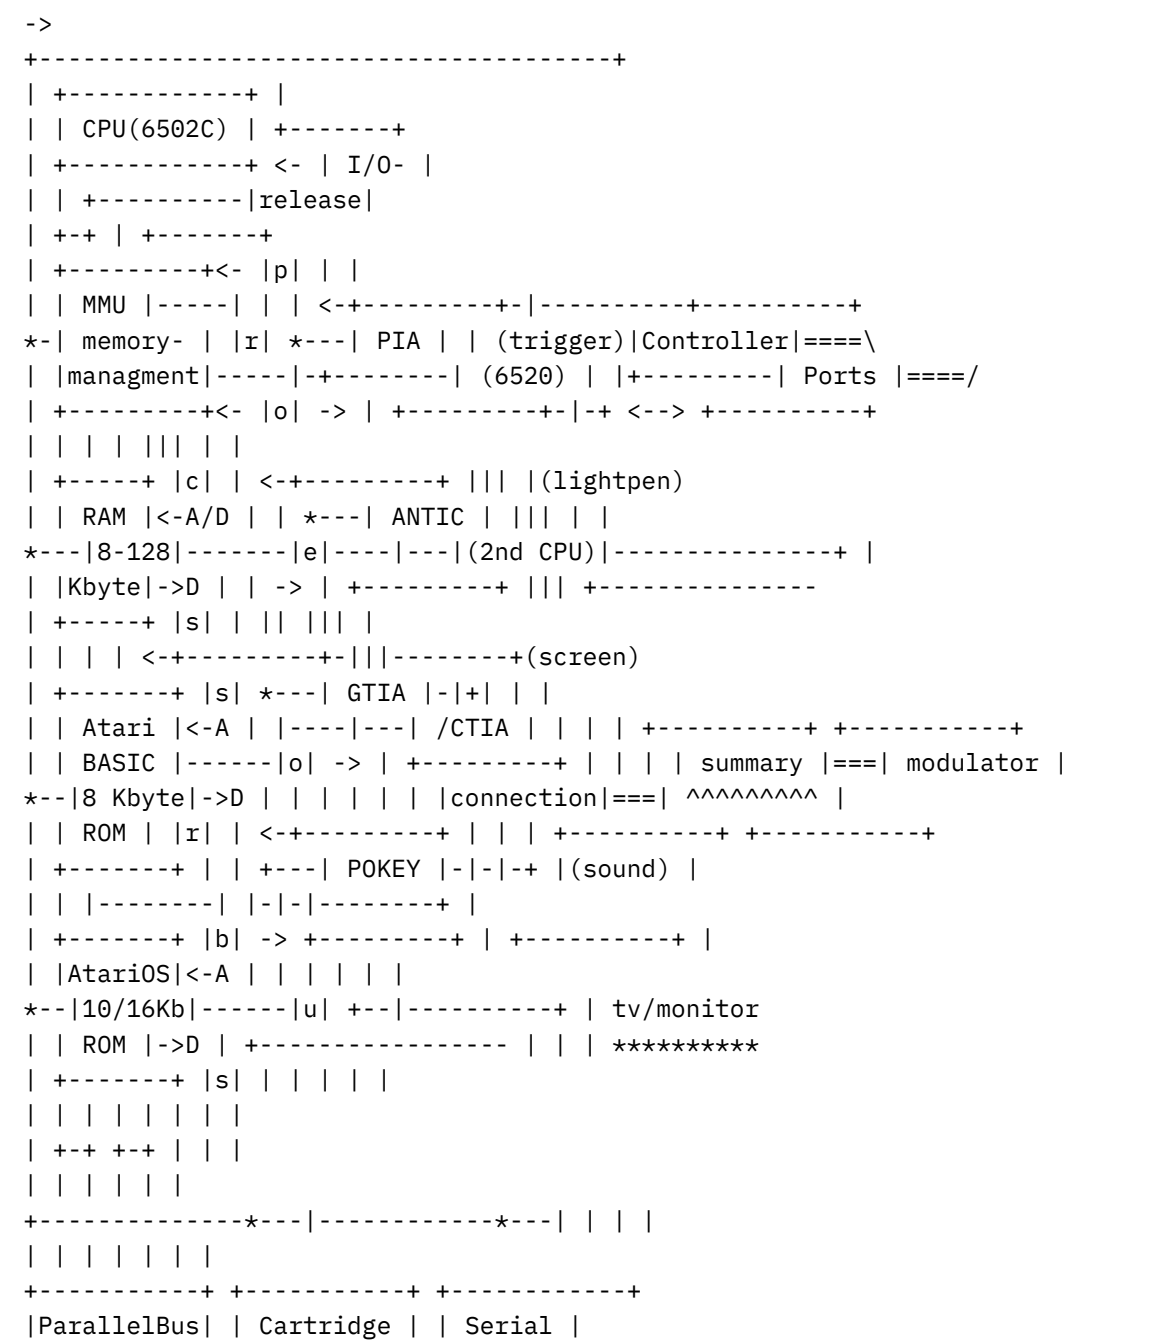
Subject: 1.4) What is the internal layout of the 8-bit Atari?

The following text was written by Chris Crawford and appears in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

GTIA is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.



POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that

does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say freddy does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement (With thanks to mailto:peter@soemtron.sb.sub.de (Peter))

```
|Interface/ | | Slot | |Input/Output|
| Enhanced | | ROM | | (SIO) |
| Cartridge | +-----------+ +------------+
| Interface | | |
+-----------+ | |
| | |
- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos ) - modem
```

NOTES
* RAM: 400/800:8/16/48K, 1200XL/800XL/65XE/XEGS:64K, 600XL:16K, 130XE:128K
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

According to Doug Neubauer (by way of mailto:finneganj@delphi.com (James Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator
???A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design
Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

According to mailto:jjessop@ix3.ix.netcom.com (Jerry Jessop), the original 400/800 OS programmers were:

Larry Kaplan
David Crane
Bob Whitehead
Al Miller

Subject: 2.1) What is comp.sys.atari.8bit?

news:comp.sys.atari.8bit is the unmoderated Usenet newsgroup for discussion about the Atari 8-bit family of computers, including the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System!

All postings to comp.sys.atari.8bit appear on the INFO-ATARI8 list.

comp.sys.atari.8bit was born around 1986 when the earlier comp.sys.atari newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st.

To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

comp.sys.atari.8bit postings are archived by the INFO-ATARI8 list server.

Subject: 2.2) What other Usenet newsgroups cover the 8-bit Atari?

news:comp.sys.atari.advocacy
Opinionated discussions about Atari computers. Unmoderated.

news:comp.sys.atari.announce
Announcements related to Atari computers. Dead newsgroup?
Moderated by Yat Siu, mailto:lexicor@world.std.com

news:comp.sys.atari.programmer
Programming Atari computers. Unmoderated.

news:rec.games.video.classic
Orphan home video game systems. Unmoderated.

news:comp.emulators.misc
Emulating one kind of computer on another. Unmoderated.

news:comp.emulators.announce
Announcements related to computer emulators.
Moderated by Qualcomm, mailto:emulators-request@qualcomm.com

news:alt.binaries.atari
uuencoded software for Atari computers. Unmoderated.

news:alt.binaries.atari.d
Descriptions/discussions on software posted on alt.binaries.atari. Unmoderated.

news:alt.binaries.comp.atari8bit
uuencoded software just for the 8-bit Atari. Not widely available.

Subject: 3.1) What is INFO-ATARI8?

INFO-ATARI8 is the e-mail list for discussion about the Atari 8-bit family of computers, including the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System!

To subscribe to INFO-ATARI8, send a message to:
mailto:listserv@vm.marist.edu
that says:
subscribe info-atari8

All postings to comp.sys.atari.8bit appear on the INFO-ATARI8 list.

Postings mailed to INFO-ATARI8 do NOT presently appear on comp.sys.atari.8bit. Therefore, to contribute to discussion threads in INFO-ATARI8 you must send your posting directly to comp.sys.atari.8bit via a Mail-to-Usenet gateway. For a current list of such gateways, refer to The Accessing the Internet by E-Mail FAQ, maintained by "Doctor Bob" Rankin, mailto:BobRankin@MHV.net or see:

http://www.landfield.com/faqs/internet-services/access-via-email/

Contributions sent to this list are automatically archived. You can get a list of the available archive files by sending an "INDEX INFO-ATARI8" command to LISTSERV@VM.MARIST.EDU. You can then order these files with a "GET INFO-ATARI8 LOGxxxx" command, or using LISTSERV's database search facilities. Send an "INFO DATABASE" command for more information on the latter.

INFO-ATARI8 is moderated by mailto:snyder10@MAILHOST.TCS.TULANE.EDU (Mike Todd)

INFO-ATARI8 was created on December 9, 1986.

Subject: 3.2) What is the Independent Atari 8bit Network?

Date: Fri, 29 Nov 1996 10:37:26 GMT
From: mailto:tomhunt@bright.net (Tom Hunt)

Closer To Home Enterprises is happy to announce the grand opening of the IA8N's QWKNET. IA8N = Independent Atari 8bit Network. This network is ran by a group of volunteers that are dedicated, hard core 8bit owners.

I am seeking more individuals to join the network.
Individuals who join this network will receive weekly, or biweekly QWK packets through internet email. These packets contain messages from member 8bit bulletin boards and from individual members of the network. These packets are ARCed and UU enocoded. Both ARC and UU encoders are readily available for almost every type of computer system, including the Atari 8bit.

Highlights from recent message threads include:

A member's recent pilgrimage to Poland to meet with various developers. He reports about a new IDE interface and Sparta Dos X clone for the 8bit.

Discussions about the new HIP graphic format. Announcment of the release of the new HIP slideshow program, and where to download it.

Discussion about David Hunt's (no relation) release of
Carina 2.7 into shareware, and where to download it.

Discussions about how to use the 8bit to access the internet,
including hot 8bit places to visit. There are tips about
which lynx servers are the best to use, how to do dns lookups,
and free telnet bbses.

Discussions about Larry Black's soon to be released ZSEND
program.

Message bases that are currently available are:

General
Internet
Programming
Hardware
User's Groups
Whine Base
Recipe
Pets

When an individual sends back a REPly packet to the network,
ARC must be used for compressing the packet. But UU, HEX, and MIME
encoding of REPlies is allowed.

The message bases have thousands of messages, many of which
contain information and references to programs that cannot be found
anywhere, even on the internet. So join the QWK Net today. This is
a FREE service to the 8bit community. Ask about a sample QWK packet,
so that you can see for yourself.

Send inquiries to: mailto:tomhunt@bright.net

"QWK Net, an Atari 8bit network, 100% managed, maintained, and
published via internet email on an Atari 8bit computer."

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of
files for many computing platforms, including the Atari 8-bit computers. For
more information:

Bill Kendrick, mailto:kendrick@zippy.sonoma.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have AFS, all our files are kept in the directory "/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT! Specifically, use:

file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software Archives" choice. Specifically, use:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari/8bit

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/ Specifically, use:

http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory. Specifically, use:

ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are several mirror sites which are all updated from the home site regularly:
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files (.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You might also suggest what permanent 8bit subdirectory you'd like your file to

end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less)
and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please
name the parts in the subject line. This is really helpful as the parts
usually don't arrive in the proper sequence. Also, please include a
message labeled "file transmission," containing a short description of
the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is
maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to
have seen no uploads for years, but there are some files here that aren't
on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no
(Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software
Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate
directory. Please include a readme file with each upload, so people know
what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson,
mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock:
ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari
8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The
Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only)
on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 4.7) What is the Slovakian Archive?

This FTP site contains some demos, games, utils, zines from all the world.
Here you can also find some Slovak or Czech stuff.

Contact: mailto:mchorvat@econ.umb.sk (Marco, of GMG)

ftp://svs.scsss.sk/pub/atari/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

Internet access to the Cleveland Free-Net (Cleveland, Ohio, USA):

telnet://freenet-in-a.cwru.edu or
telnet://freenet-in-b.cwru.edu or
telnet://freenet-in-c.cwru.edu

Type "go atari" at any menu.

Contact:
mailto:xx004@cleveland.freenet.edu (Atari SIG)

Subject: 5.2) What is the National Capital FreeNet Atari Users SIG?

Internet access to the National Capital FreeNet (Ottawa, Ontario, Canada):

telnet://telnet.ncf.carleton.ca (Type "go atari" at any menu) or
gopher://gopher.ncf.carleton.ca or
http://www.ncf.carleton.ca/

Contact:
mailto:ac382@freenet.carleton.ca (Jack Kitowicz) or
mailto:aa728@freenet.carleton.ca (Blair Dea)

Subject: 5.3) What is the Victoria Telecommunity Network Atari Users SIG?

Internet access to the Victoria Telecommunity Network (Victoria, British
Columbia, Canada):

telnet://freenet.victoria.bc.ca (Type "go atari" at any menu)

Contact:
mailto:ua558@freenet.victoria.bc.ca (Gordon Hooper) or
mailto:ud264@freenet.victoria.bc.ca (Ted Skrecky)

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

Subject: 8.1) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #rgvc - Classic Games and Systems Collectors. "Rec.Games.Video.Classic"

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server

(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) What are the .DCM, .ATR, and .XFD file formats?

These are all filename extensions used to name files containing entire 8-bit
Atari floppy disk images.

DCM - Disk Communicator format. Invented by Bob Puff,
mailto:76702.1076@compuserve.com for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.

ATR - Atari disk image format. Invented by Nick Kennedy,
mailto:nkennedy@cswnet.com for his SIO2PC project.
Used when working with non-Atari hardware.

XFD - Xformer disk image format. Invented by Emulators Inc,
mailto:emulators@msn.com for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used when working with non-Atari hardware.

PRO - APE ProSystem format. Invented by Steven Tucker,
mailto:classics@nacs.net for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.

Subject: 9.4) What are the .XMO and .BIN file formats?

XMO stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

BIN - another filename extension sometimes used to designate binary-load
files. Like .xmo, use of .bin is discouraged.

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version

Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T XE v. 2.72 (128K) or Ice-T 1.1 (48K) by Itay Chamiel
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download
Autodial: Yes (2.7 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.7 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.7 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad Kokoszkiewicz, mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:

- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:crow@cs.dartmouth.edu (Preston Crow),
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe

Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard floppy drives to be used on the Atari. A utility is included to read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on each computer. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. (Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25-pin port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C
port.
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o
25 14

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed
but also pins 4 and 5 as well as 6 and 8. Or better
yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already
crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,

chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 67000 bps

CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38400 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps

- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades (CSS)
- Floppy Board (CSS)
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need to obtain one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Rare.
Fast but still relatively slow I/O, kludge through joystick ports for 800.

==> KPI Hard Disk Drive Interface (formerly Supra)
from K-Products (bobkla19@mail.tcd.net - Bob Klaas)
Some limitations on drive type and size and total number of drives in sys.

==> Multi I/O (MIO) (formerly from ICD)
from Fine Tooned Engineering (FTe) (ftooned@crl.com - Mike Hohman)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Black Box
from Computer Software Services (CSS) (76702.1076@compuserve.com - Bob Puff)
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface
from Konrad M. Kokoszkiewicz and Jacek Zuk
(see http://www.orient.uw.edu.pl/~conradus/docs/ide_eng.html)
o Maximum drive capacity: 16777215 physical blocks on each device.
o Maximum number of partitions: 16
o Maximum capacity of a partition: 16777215 logical sectors
o Logical sector length: 256 or 512 bytes
o Average speed (in kilobytes per second, WDC 130AB drive):
- Native mode, sequence of sectors (R): 75
- Emulation mode, sequence of sectors (R): 43
- Emulation mode, back sequence (R): 28
- Emulation mode, random sectors (R): 13
- Emulation mode, same sector (R): 29
- Emulation mode, DOS file (W): 7
- Emulation mode, DOS file (R): 36
o Booting from any partition (on the standard XL OS)
o Write protection capability
o 8 jumpers to set the device number for the operating system
o Sweet 16 compatibility

* real device for the parallel-port of the Atari XL-Series
* up to 240 partitions per harddisk supported
* emulates D1: until D9: of disk devices (access to 9 partitions at
one time)
* full bootable from any partition (with standard XL-OS)
* write protectition capability
* supports master/slave configuration
* more than 30 KB/s file access with SPARTA-DOS 3.2 gx (reading)
* more than 10 KB/s file access with SPARTA-DOS 3.2 gx (writing)
* access of ATAPI-CDROM with additional software

Subject: 12.4) What is SIO2PC?

Original text by Dave Paterson, mailto:davepat@total.net

SIO2PC is a cable and software combination that lets you use your PC as up
to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to
16 megs. SIO2PC also lets you redirect the printer output to your PC
printer or to a file on the PC. High speed drives are emulated (a la US
Doubler).

All these functions are transparent at the Atari end; you never notice the
difference between SIO2PC and regular drives, except that the SIO2PC drives

are faster than any others (except Ramdisks and PBI interface drives).

Several different designs for the SIO2PC hardware are floating around. Best contact the author for the latest details.

SIO2PC 4.13 is shareware by Nick Kennedy, mailto:nkennedy@cswnet.com

---

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system.

Either MYDOS or SpartaDOS will work with almost any disk drive, up to 8 drives or hard disk partitions, and ramdisk.

MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum. Complete documentation about the disk formats and commands, as well as the source code, is available.

SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/developer list). SpartaDOS 3.3a and 3.3b were rewritten by Stephen J. Carden for use with BBS Express PRO!.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Any other versions of DOS all 8-bit Atari users should be aware of??

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI

130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missile Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions

600 600XL, all black case
1200 1200XL internally, many slight cosmetic differences
1200XLS 1200XL Show prototype, top-mounted cartridge slot
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier name for the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
1600XL ????
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE/AMY sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor

XF521 -5.25" floppy drive - 1050 compatible, in XE style
XC35 -an XF551 with a 3.5" mechanism
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

Thanks to Matthias Belitz, mailto:matz@kawo2.rwth-aachen.de for the European data in this section. I need more international help!

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have.

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

I own two ones with the same part number, but different cases and different
input Values :#1, 65 XE (Poland, made in Taiwan), Input 22 VA
#2, 800 XL, Input 26 VA
9V AC 3 A, CO#60592 : 1050
9V AC 0,5 A, CO#61516 : 1010
9,3V AC, 1,66 A CO# (not printed), FW 6799: 800

These draw their power from the SIO +5 V:
XM301 (60 mA),XC12,ICD/FTe P:R:Connection

Draws power from the 600XL PBI:
1064

These have built-in power supplies (plug directly into the wall):
410,815,820,825,1025,1029,XMM801,XDM121

The power supply requirements for the following are still needed:
??? V DC ???? A (???? W) Atari#CA060535 adapter:
835

XC11 program recorder (no brick needed -> internal or SIO source?)

OTHER:
The ICD/FTe Multi I/O (MIO), all versions, can use both AC and DC supplies.
But stick to voltages of at least 6.2-7.2 V.

Subject: 13.4) What are the pinouts for the...?

Serial I/O (SIO) Port (all machines):
2 4 6 8 10 12
1 3 5 7 9 11 13
1. Clock Input 8. Motor Control
2. Clock Output 9. Proceed
3. Data Input 10. +5V/Ready
4. Ground 11. Audio Input
5. Data Output 12. +12V (400,800 only. 1400XL/1450XLD?)
6. Ground 13. Interrupt
7. Command

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that

performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial programs. I haven't heard anything about OASIS IV and CARINA for a while, but BBS Express! Professional is presently sold and supported by K-Products.

Subject: 13.6) What versions of Atari BASIC or the C/GTIA chip do I have?

Atari BASIC:

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Freddy Offenga, mailto:offen300@hio.tem.nhl.nl adds:

there's another good answer (IMO):

You can also take a look at the part numbers on the IC's inside your Atari and compare them with the numbers from the following table:

Part#	Version
CO12402 + CO14502	A
CO60302A	B
CO24947A	C

CTIA or GTIA installed?

In BASIC, type POKE 623,64 [RETURN] and if the screen blackens, you have the GTIA chip. If it stays blue, you have the old CTIA chip.

Subject: 13.7) Which versions of the Operating System (OS) are there?

This section written by Freddy Offenga, mailto:offen300@hio.tem.nhl.nl

The following Operating Systems exist for the Atari 8-bit:

Rev.	System(s)	Models	Size	Part Nr(s)
A	NTSC	400/800	10kB	CO12499B, CO14599B, 12399B (*)
A	PAL	400/800	10kB	CO15199, CO15299, CO12399B
B	NTSC	400/800	10kB	(?)

B PAL 400/800 10kB (?) (*)
1 A NTSC/PAL 1200XL 16kB CO60616A, CO60617A
1 B NTSC/PAL 1200XL 16kB CO60616B, CO60617B (?) (*)
1 NTSC/PAL 600XL 16kB CO62024
2 NTSC/PAL XL/XE 16kB CO61598B
3 NTSC/PAL XE 16kB C300717
4 NTSC/PAL XEGS 16kB C101687

(?) more information or confirmation required

(*) these versions should exist, although I've not seen them.
If you have one (or more?) of these, please contact me.

NOTE:
The 400/800 O.S's consist of three ROMs (two 4kB and one 2kB).

Subject: 13.8) What games support 4 simultaneous players on the 400/800?

The following games support 4 player head-to-head play. Remember, only the 400 and 800 computer models sport 4 controller ports.

Asteroids, Basketball, Breakout, Dandy, M.U.L.E., Maze War, Silicon Warrior, Survivor.

Thanks to mailto:jlodoen@shell.portal.com (Jeff M Lodoen) for initial info.

Subject: 13.9) Why should I disconnect the 810/1050 power supply before connecting or disconnecting SIO cables?

Rich Mier writes:

You've been plugging and unplugging the SIO cable with the 1050 power pack plugged in, right? That's a no-no. Most of the time it's Okay, but about 1 in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right, rear of the main board. A 14 pin DIL chip. Actually it is an array of 5 transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be ON on the CPU. The problem has to do with the secondary winding of the Power Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do it, not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it 'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

Subject: 13.10) What is Omnimon?

--This section was written by Scott Charles, mailto:scharles@blast.net

Omnimon is a add in board for the Atari 400/800 series of computers and a replacement OS chip for the xl/xe series of computers. The original Omnimon board fit onto the OS board in the 800 series and had a switch attached to it to disable the board. The 400 series required you to bend the circuit board into a right angle for it to fit inside the 400's case. (It was designed to do this.). The Xl/Xe version replaces the OS Rom chip inside the computer with one that contains the Omnimon code, and a revised OS to make the XL more compatible (no translator disks needed).

Omnimon itself is a machine language monitor residing from $C000-$CFFF, with a few variations. It was designed in 1981 by David C. Young (who also wrote Cartcopy, a copier for the right slot of the 800) of CDY Consulting in Texas. The first software revision of Omnimon had a few basic commands and was only 4K long, only for the 400/800. The second revision required the addition of a bank select switch, and was 8K long. Since it was addressed by the 400/800 as 4K, when you needed to use the code in the other bank, all the text on the screen flips upside down, you flip the switch and hit any key. The Xl and Xe versions of Omnimon do their bank selecting through the normal XL port for this function, so it is seamless.

So what can you use Omnimon for? Its main claim to fame is its ability to interupt any running program by pressing and holding the SELECT-OPTION-RESET keys. Depending on the sequence you press determines what kind of warm boot the Atari does. SELECT+RESET does NO warm boot, preserving the stack and flag values of the 6502. OPTION+RESET allows a warm boot (as if you had just pressed RESET) and interupts the vector at $C (initialation vector).

I think you can see where we are going with this - Omnimon was developed as a machine language developer's tool, much in the same way that the Happy modification was developed for legitimate backups. I.E. far more people use both products for software piracy. If you have an Omnimon! in your machine and you try to boot up an Electronic Arts program, for example, you will get a message that says "REMOVE ROM AT $C000", and the program hangs. (Hence,the need for the disable switch on the 400/800 version. There is no way to disable the xl/xe version, just switch it to an alternative OS.) The 400/800 version, since the disable switch just deselects the mapping of Omnimon to $c000 area, can be switched on and off at will.

I myself did not know what Omnimon was used for until I was using a sector editor on a program called Pharaoh's Pyramid, from Master Control Software. On it is a sector that reads, "REMOVE OMNIMON YOU DIRTY PIRATE". This got me to thinking, what does that mean? After about 5 months of playing around with the Omnimon board, I figured out how to use it to pirate software. In fact, it can be used to make most boot disks into binary files, and remove copy protection from countless more.

At the risk of sounding melodramatic, I can safely say that Omnimon hastened the demise of the Atari 8 bit computer by 2-3 years, because of its power.

Subject: 13.11) What is the difference between NTSC and PAL machines?

Wayne Booth, mailto:trek@ihgp15.ih.att.com writes:

The differences with PAL and NTSC have to do with the number of lines displayed on the screen and whether they are using 50 or 60 Hertz.

If I remember correctly, I believe PAL has 625 lines/screen and they refresh the screen 50 times a second doing 1/2 the lines each refresh so they effectively repaint the screen 25 times a second. NTSC is 525 lines/screen with a 60 times a second refresh - again only half the lines each refresh so a 30 times a second frame rate. This would change the amount of time available during vertical sync pulse, and the number of lines that need to be redrawn each time.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List."

Available via these locations and Usenet FAQ archives everywhere:

http://www.landfield.com/faqs/atari-8-bit/

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/

news:comp.sys.atari.8bit news:comp.answers news:news.answers

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

---

Subject: 14.2) Where is my nearest 8-bit Atari BBS?

InfoMan (Trevor Holyoak), mailto:infoman@poboxes.com maintains a list called "Atari 8bit Support BBS's."

http://www.holyoak.com/atari/ATARIBBS.TXT

Subject: 14.3) Where is my nearest 8-bit Atari user group?

Rick Detlefsen is presently compiling a new comprehensive Atari computers user groups list. Contact him by any of the following for more information:

Rick Detlefsen Compuserve:74766,1561
Genie:R.DETLEFSEN
Internet: mailto:74766.1561@compuserve.com

Or by Mail: USER GROUP SURVEY
C/O RICK DETLEFSEN
8207 BRIARWOOD LANE
AUSTIN, TX 78757-7642

Subject: 14.4) I'm new to the Atari. How do I use this thing?

"The Unofficial Atari 8-bit New User, Emulator Help FAQ" is maintained by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick). Bill and his FAQ are excellent sources for information on basic usage of the 8-bit Atari, and for information on the 8-bit Atari emulators which run on other computing platforms. See:

http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html

Subject: 14.5) Can I use an emulator to run my old Atari software on my new computer?

"The Unofficial Atari 8-bit New User, Emulator Help FAQ" is maintained by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick). Bill and his FAQ are excellent sources for information on basic usage of the 8-bit Atari, and for information on the 8-bit Atari emulators which run on other computing platforms. See:

http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html

Subject: 14.6) What hardware upgrades, modifications and add-ons are available?

The Atari 8-bit Hardware Upgrade, Modification and Add-On FAQ is maintained by David A. Paterson, mailto:davepat@total.net or see:

http://www.geocities.com/SunsetStrip/Alley/1878/hard_faq.htm

Subject: 14.7) What is the HARD-Interlacing-Picture (HIP) format?

HIP is a new method to displaing pictures on small atari...

HIP stands for HARD-Interlacing-Picture and was found by
Members of HARD Software, Hungary in June, July 1996...

It enables to display 160 x 240 Pixels with 30 shades without
nearly all flickering (depends on the source-picture you use)...
HARD stands not for HARD or HEAVY Interlacing, just for the
inventors...

For more information, see the HIP-FAQ, located at:
http://www.uni-karlsruhe.de/~Marek.Tomczyk/Atari8/hipfaq.html

or contact HeAvEn at mailo:nadkar@fh-pforzheim.de

Subject: 14.8) How do I access Usenet, FTP, Gopher, and WWW by e-mail?

The Accessing the Internet by E-Mail FAQ is maintained by "Doctor Bob" Rankin, mailto:BobRankin@MHV.net or see:

http://www.landfield.com/faqs/internet-services/access-via-email/

2238. Wild & Wacky Atari Auction (Update #9)

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-09 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970309081700.DAA08734@ladder01.news.aol.com>
Source record: 75160

```
Wild & Wacky Atari Auction (Update #9)

Rules and stuff:
----------------
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

Actually, the ACSI (Atari Computer System Interface) port is also called
the DMA port. The ST has a standard parallel port as well. But of course
ST I/O really doesn't belong here, so I'll stop now.

Rainbow v1.4 (for Apple Mac) is now ready!

Hello all,

Version 1.4 is now available. New features include the use of POKEY samples for even better sounds, hide desktop feature, prompts to save modified disk images and more.

Registered users with v1.3 please download the updater(s) from the Rainbow page. Do *not* e-mail me for updates.

Those registered users with v1.2 or earlier (heaven forbid) please e-mail me for the new v1.4.

A free, cut-down demo of v1.4 is, as ever, available for you to try out.

Regards,

Chris Lam,
Rainbow/Horizon Keeper.

Sidney Cadot (sidney@ch.twi.tudelft.nl) wrote:
: Hi,

: >You need to have three PLAs,since you always have to specify one argument
: >to USR().
: >The point is that you can't use USR to call OS routines.
: >And the XIO command is too limited and there's no SIO command.
: >(and yet there are useless commands like GRAPHICS)

: You are mistaken. First, only one PLA is needed. Atari BASIC actually
: pushes the number of arguments on the stack, followed by two-byte
: entries for data supplied to the USR() function after the first
: argument, which is the called address. In this way, it is possible to
: make USR() calls which can actually process a variable number of
: arguments.

As I remember,USR() PHA's the number of arguments.
And then PHA's a 16-bit number for each argument.Since the least you can
have is one argument,there's always three bytes to PLA.
(PHA=PusH Accumalator,PLA=PulL Accumalator)
You might make a routine that takes the first argument and simply JMP to it.
But you need more than this for CIO.(you need to fill in the X register)

: By the way: the USR() function returns the value which is put into the
: addresses 212-213, enabling you to communicate result codes back to
: BASIC, for example.

I always wondered why the index registers weren't simply used for that.

: Using this mechanism, it is actually very much possible to call
: whichever OS routine from BASIC, like CIO, SIO, DISKIO, SETVBV,
: etcetera.

Still,BASIC commands to do this (and a better XIO that used AUX3-AUX6)
should've been implemented instead of "macro" commands like GRAPHICS and
NOTE&POINT.
And commands to move data around (or else a DIM/COM that let you assign a
memory address as the storage space for a varrible) as well as a way to
have a varrible point into the BASIC text itself.
(so that A$="r744hxdfw4hsnf7):REM ML ROUTINE wouldn't waste 15 bytes)
And a way to define new functions (like Microsoft's DEF command) so that
commands like GRAPHICS wouldn't need to be built into the cartridge.

Source record: 75166

James King (jeking@xmission.xmission.com) wrote:
: Hmmm. I have a 386/40 running as my APE server, it has connected to COM2:
: a Hayes Ultra 9600 modem.

: My Atari will ONLY access that modem through APE, if I set the baud rate
: (within bobterm, etc..) to the maximum of 19200. However, when I connect
: to a BBS, I get what appears to be buffer overruns, because I get a ton of
: dropped characters, etc..

If it's a modem with compression,then 19200 would be the corect speed to use.
An example of the CONNECT (and CARRIER and so forth) string would help.

The APE R: handler most probably generates it's own baud rate instead of
letting the hardware(POKEY chip) do it.This means it can't go nearly as
fast as a disk drive since not only does it send a single bit at a
time,but it must time the sending of the bits exactly.So it's not very fast.
Since 19200 is the one speed suported by the POKEY chip,I don't why why
APE's R: handler doesn't switch to using the POKEY when the user switches
to 19200.

: Off the top of my head, I can think of a couple fixes: Hyperspeed handler
: for my Atari, Ensure that data compression, etc.. is turned OFF on the
: modem.

What's HyperSpeed.

Source record: 75167

Steve (read@my.sig) wrote:
: noone@nowhere.com (Yogi) wrote:

: >Heres an idea: Any one have the source code for Mydos?
: >How about updating it so that you can have any size image with as many
: >files as you like (none of this subdirectory stuff)?
: >Anyone game?
: >

You'd have to update APE as well.Why not just update APE to allow PC
mirror to provide a SpartaDOS image?
Better yet,let APE be the DOS and D: would be a networked file system.
(ala UNIX's nfs)

: Break the 64 filename barrier? Now that's food for thought...
: Can you imagine how long it would take to scroll through a directory
: that has over 5000 files? (Thats approx the amount I have in a MyDOS
: image). Hmm, it certainly would be nice to have more than 64 files per
: DIR tho...life would be much simpler.. :)

I don't know about that,but allowing sub-directory size to be specified
upon creation would be nice.Since the size of a sub-directory is kept in
the directory entry for it,this could be used to tell DOS how many sectors
are in the directory.
(of course sub-directories would still be made up of contigous sectors)

: One thing comes to mind. The difference between single and double
: density disk directories. Why can't we have 128 filenames on a D/D
: disk? (Sparta excluded, it already does?). I have noticed that any of
: the Atari DOS's that use double density still only use 128 bytes per
: sector for the DIR, even tho the sectors are 256 bytes long. This just
: seems an absolute waste of usable directory space. Maybe this could be
: used to increase the DIR space somehow?. If I were a decent programmer
: I'd be straight onto this, but......
: Glad you brought it up Yogi, very good point..

It was done that way for AtariDOS compatibility.Why Atari made it that way
is anybody's guess.
It would be nice if that space was used for something.
(it basicly means that reading the directory of a double density disk is
slow than one of a single density disk)

Hi!

I have written a TCP/SLIP stack for 6502 computers!
It runs on several platforms, on the operating system OS/A65.

Currently the echo, discard and chargen ports are implemented
Also a kind of NFS has been implemented, to use the server
as a disk for the 6502 (Currently only reading works).

If you want to have a look at it:

http://www.tu-chemnitz.de/~fachat/csa

and

http://www.tu-chemnitz.de/~fachat/csa/README.slip

so long

2249. FS/T: Atari 8-bit computer items [03/10/97]

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-10 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <5g0hbt$j5j@dfw-ixnews9.ix.netcom.com>
Source record: 75072

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 03/10/97

NOTE: There are currently 1483 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.00 Atariwriter
$ 5.00 Basic -- for use with the Atari 400 and 800
$10.00 Delta Drawing (Spinnaker)
$ 3.00 Missile Command
$ 3.00 Space Invaders
$ 5.00 Star Raiders

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers -- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers (14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3 (100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog (32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$32.00

*****

LOT #2

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 5.00

*****

LOT #3

ATARI 820 PRINTER, with one (1) roll of paper and built-in power cord.

This item has not been tested.

$12.00

*****

LOT #4

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print" Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for 400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$15.00

*****

To reserve any item(s) listed here, please contact me (please read
the SALES CONDITIONS section first). Thank you!

Is there any particular reason you like to followup posts
about APE when you have no idea what your talking about? I try to
answer peoples questions correctly when I have time, but your posting
this kind of nonsense is not helping anyone. You frankly have no idea
what your talking about, and I would appricate it if you would not
follow up posts about APE with garbage I just have to correct later.

Since you have decided to help everyone with your vast
knowledge once again, could you please explain how to generate a 'baud rate'
by 'sending a single bit at a time' without using the POKEY? Please
include working code examples to demonstrate.

Also, please include examples of how 'disk drives do it', and why
that method is so much faster than the method you documented above. Please
include working code examples.

Please also explain how the POKEY only supports the baud rate
of 19200, how to 'switch to it' from your 'single bit' method, and how to
use it in an R: handler.

Thanks for your helping once again.

Steve

No, I would. :)

> Why not just update APE to allow PC mirror to provide a SpartaDOS image?

Because spartados would have to be hacked or changed to make it work. Thats
why not.

> Better yet,let APE be the DOS and D: would be a networked file system.

Yeah, since were re-writing Mydos and Spartados, to hell with compatibility
all together. Great idea.

I'm sure it was kept at 64 filenames to mantain some level of
backward compatibility with Atari DOS. If your willing to
introduce a host of compatibility problems, then anything is
possible, including directories of any size.

If you go for incompatible-but-cool, you could make disk images
as big as you want, gigabytes, terabytes. Huge 10k sectors, a decent
FAT system, growing subdirectories, etc.

Maintaining compatibility while providing additional functionality is
not easy, and I think reclaiming those extra 64 directory entries would
be more trouble than its worth.

Steve

Gerards,
IHMO, absolutely! I have bothe a real 130XE and PC Xfromer 3.60.
There are loads of games that will run on either format. I started out
with the 800XL and did mostly BASIC programming. I still love it! Some
of that stuff is still amazing to me, even after all these years. BTW,
I use PCs all the time and from time to time run the PCXf at work to do
some simple programming in BASIC. I haven't had the time to even think
about learning a PC platform language.
In any case. PC Xformer 3.60 is FREE from www.emulators.com and
there are many sites to get software. Even if you decide that you don't
like it, it's worth the time to at least try it!

Try a different DOS, like SpartDOS 3.3. If you need a copy, e-mail
me and I will send you an ATR image with sume additional files. PCXf
3.6 does a pretty fair job if you get the right combination of DOS and
programs.

Try MLX=ADR("r744hxdfw4hsnf7") then you don't have to DIM anything, or waste string space.

Andre,

TCP/SLIP on a 6502. Thats amazing. Will you do it for other proccessors.
What applications have you in mind. I am wondering if something to serve
HTML to a PC over a dial up connection. How about a BMS with HTML. Have I
got the wrong end of the stick or am I on the right lines? You could have
this in a place you visit infrequently and check the Alarms and Temperature
and Ocupency of the building, all displayed neatly in the Browser. Do you
also know SNMP?

Regards,
Wayland.

```

You didn't write, if you use xfd or atr files !

One wish to all users:
Because all known (to me) programs will now support atr-files, please
don't use xfd-files any longer.
Is a great disadvantage of xfd's, that the size and the density of the
files isn't stored somewhere in the file. this causes trouble everywhere
you use it ...
There are some programs out now to convert between it - so try them and
in cases this won't work, copy all files to atrs now !!!

```
Please !

Matt

Source record: 75087

Hallo !

I&#65533;ve created a inf files now to install XLit automatically on your
machine now adding some features in the context menu:
- starting XL-it by double clicking on any atr/xfd-file
- starting XL-it with the "Yogi"-menu-atr and any atr/xfd-file by
right-clicking on it
...

Try and enjoy it.
Please send me any comments - especially about the readme-file - my
english is not the best and so I don&#65533;t know, if everybody will
understand, what I mean. I also only use the German version of W95 and
so don&#65533;t know, how the menu-entries are named originally .

Matt

I will not do it for other processors, maybe except the 65816.

Hm. WWW. That's indeed possible. You can easily register a service for port 80,
which is the http port for the WWW. Although the dial-up connection needs
some more work (dial-in server etc), but compared to TCP, that's nothing.

And then you can easily hold a html template and fill in the stuff
when needed. That is a good idea actually. You should find a nice
code template in the "chargen" port code, that sends a continous
stream of characters when telneted to.

Currently the problem is that all the port servers don't run as
separate programs, but as part of the SLIP client.
That will probably change in kernel 2.0 only.
(The current interprocess communication in my OS is way too slow)

I don't know about SNMP, sorry.

so long

I don't know if this will help anyone, but I had a little time this weekend and decided to put something on the internet that would be of some use for the atari. Some of you veteran atari users might already know how to do this, but this might be of help to someone who is new to atari's. I have put up a web page with pictures describing how to create bad sectors with a 1050 disk drive.

The url is http://www.comland.com/~idavis/atari.html

No gimmicks, just plain information.
Hope this helps someone.

julie (70707.3430@compuserve.com) wrote:
: Sorry if this is a dumb question, but.....

: I'm just now looking into an Atari 8-bit emulation package for my PC. I
: have tried the shareware versions of Xformer and Rainbow, but I would
: like to try some actual programs (O.K., games) before buying anything. I
: think I understand how to use the various disk images, but I downloaded
: some files with .EXE extensions and I was wondering if anyone could give
: me a clue how to use them. I can't seem to figure it out, and I haven't
: seen anything about .EXE files in any FAQs I've looked in.

Since there's no such thing as a EXE file on the Atari (though SDX has
something like that),I'd assume they were COM files.
(refered to as OBJ in some extention lists)
Just use them with Xformer like you would a ATR file.But you'll need to
use a ATR with DOS in it as well.You can use Xformer to copy COM files to
ATRs using MyDOS's "C" command.

XFORMER MYDOS.ATR GAME.COM GAMES.ATR

Then from DUP (if you're in BASIC,type "DOS" to get to the Disk Utility
Package) type "CD2:GAME.COM,D3:" to copy it.Note that DUP will automaticly
put a RETURN after the first "C".

Only SpartaDOS's DUP (the "command processor") understands the extention
"COM".MyDOS's DUP makes you type the filename & extention regardless of
what it is,so you might as well leave the extention off.

If you type a filename (under MyDOS only!) that's more than 8 characters
long,it assumes that the extra characters are part of the extention.
So "FILENAME.BAS" can be refered to as "FILENAMEBAS".
(but "FILE.BAS" still has to be called "FILE.BAS")
So you can use this to emulate long (11 character) filenames.
Also:MyDOS allows you to use lower-case characters in a filename where
other DOSes only allow upper-case.

: by 'sending a single bit at a time' without using the POKEY? Please
: include working code examples to demonstrate.

The POKEY sends the bit (i.e.alters the voltage on the SIO line(s)),but
it's up to the handler to set this bit with precise timing so as to remain
in "sync" with the modem.(or whatever)

: Also, please include examples of how 'disk drives do it', and why
: that method is so much faster than the method you documented above. Please

: include working code examples.

The SIO handler just puts the byte into a POKEY register and the POKEY
does the "shifting" of the byte down the SIO line,a bit at a time.
(note:this is how the PC asynchronous comunications adapter works)

: Please also explain how the POKEY only supports the baud rate
: of 19200, how to 'switch to it' from your 'single bit' method, and how to
: use it in an R: handler.

The point of the handler handling the SIO lines directly (instead of
letting POKEY do it) is to generate baud rates that are compatible with
modems.This was alright for the 850,since it only went up to 9600bps.
But with newer interfaces,the software shifting method is too slow.
(though the problem with the P:R:C may just be bad programming)
Since POKEY can obviously do 19200bps (it's what disk drives do,and the
SIO2PC as well),it would be better to use hardware shifting (i.e.letting
the POKEY chip handle the timing rather than just toggleing voltages) for
19200.Further more,the APE docs claim to go at 38400 and 57600,so the
POKEY would seem to handle those speeds as well.

Since the POKEY R: handler only went up to 19200,I assumed that it was
like the 850.

I've also read something about a "CLOCK IN" line that would seem to sugest
that a external device can provide timing for the Atari(presumably the
POKEY).OF course atari had the handler provide the timing rather than
making their 850 more complex.

: Thanks for your helping once again.

Hey,where's my correction.You said you had to correct me!

Message-ID: <33247cf7.5232637@news.tudelft.nl>
Source record: 75096

Hi all,

Anybody know when jellystone will be back online at
ftp.hackerz.com? I can't get thru for one!

Also, has anybody noticed that a lot of the files have extra bytes at
the end (probably caused by transfer by xmodem or something)? This
could cause them to fail on loading! I plan to try to recover such
files (have already written some progs to analyse and repair them).

It would, I think, be a good idea if there were a list of all known
game files, along with a checksum of their contents. It would be a
good starting point if yellystone had such a file in each directory.

YOGI, if you're reading this, and think this is a good idea, please
contact me as I have written some nice programs which could be useful
for this.

Regards,
Sidney Cadot

-: >files as you like (none of this subdirectory stuff)?
-: >Anyone game?
-: >
-
-You'd have to update APE as well.Why not just update APE to allow PC
-mirror to provide a SpartaDOS image?

Why? APE already supports disks up to 16 MB. (# sectors=$FFFF) which is the max the ATari can support (NO, I dont want to write a new OS! for the 8 bit OR the disk drives)

-: Break the 64 filename barrier? Now that's food for thought...
-: Can you imagine how long it would take to scroll through a directory
-: that has over 5000 files? (Thats approx the amount I have in a MyDOS
-: image). Hmm, it certainly would be nice to have more than 64 files per
-: DIR tho...life would be much simpler.. :)

Well, so does my PC, and the tree there works fine. I am looking at it in terms of, why should I have to flip through 20 mega image disks to get at one game? I want to have as many as possible in each image, and 64 just doesnt cut it. It should be possible to modify atari dos even to work over 64 (the limititation of 64 is caused by 8 entries in each directory sector*8 sectors=64 max. Does mydos only permit 64 ROOT entries? Actually, for that matter, doesnt MS Dos only support 256 root files?)

-: One thing comes to mind. The difference between single and double
-: density disk directories. Why can't we have 128 filenames on a D/D
-: disk?

8*8, see above..... but should be DD? Strange.....

-It would be nice if that space was used for something.

How about longer filenames?

-(it basicly means that reading the directory of a double density disk
is
- slow than one of a single density disk)

Can you imagine what a nightmare drive that would be that would have
to format the whole disk in DD, write the first 3 sectors in SD, then
write only the directory sectors in SD (1/2 the track) then switch
back to DD? Ugh

There were a few protected mode programs for the 386 that emulated
the math coprocessor? I think they were distributed alot with the
first generation of JPG viewers. Possibly this would work?

Look at what you said above and what you have written here. This part
is nonsense. Clue: All communation involves the POKEY AND SOFTWARE LOADING.

> Since POKEY can obviously do 19200bps (it's what disk drives do,and the
> SIO2PC as well),it would be better to use hardware shifting (i.e.letting

> POKEY would seem to handle those speeds as well.

The POKEY is a very flexable chip, you might be suprised how fast it
can communicate if its loaded and unloaded fast enough. Again the
toggling of voltages via software is nonsense.

> Since the POKEY R: handler only went up to 19200,I assumed that it was
> like the 850.

All R: handlers are POKEY R: handlers, unless they use the joystick ports
or some other interface. The 850 interface is limited not by the
abilities of the Atari, but by the design of the interface itself.

> I've also read something about a "CLOCK IN" line that would seem to sugest
> that a external device can provide timing for the Atari(presumably the
> POKEY).OF course atari had the handler provide the timing rather than
> making their 850 more complex.

An external device can provide its own clock for the pokey, or it can
derive its own clock from the system clock. Once again, the handler does
not ever generate any baud rates by 'switching voltage levels'. Ever.

> : Thanks for your helping once again.
>
> Hey,where's my correction.You said you had to correct me!

You should have corrected yourself in the original post, or in the many
posts you previously have made on the subject.

Steve

I got an opportunity to see Xformer and Xl-it in action. I was impressed. I ran a couple of music demos (one from AR: THE Dungeon) and the 486 I have emulated the music of an 8bit nearly perfectly. Some of the demos (the Atari SWAN demo ran well too.) Never got a chance to run any games or applications) But I just wanted to thank the emulator programmers for the blast from the past, a real shocker to see the 40 col 8bit blue screen on my PC. Now only if I had free time to play around with it... :)

Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

I have a 1040STf and an SC1224 color monitor for sale.
The ST is is in great shape electronically and cosmetically.
It comes with the mouse and power cable, but that's about it (maybe a game or two).
The monitor works fine as well, but every now and then it suffers horizontal squeeze (not extreme). It fixes itself, or goes away with a tiny tap.
I'd like to sell the 2 together for $80 + shipping (probably a total of about $110). Local pick up would be best (pasadena, CA) and might consider some interesting trades (midi gear, a Jag system, etc)

Thanks!

I know what you mean... I asked a question about having more than 64
files on a disk, and got told in no uncertain terms that it would
generate too many incompatabilities to do so..... I think I'll leave
it at that!
Ummm, not that I'm being picky or anything, but an 800 XE?
Sorry, but I think you mean 800 XL. They brought out the 65XE and
130XE, and before them were the 600XL and 800XL. and going even
further back were the 400 and 800 series computers. oops, I almost
forgot the 1200XL, and another series that they should have produced
was the 1450XLD (and others, but this is as far as my knowledge goes).

Ok, to the question at hand, the ATR file! Well, if you were to place
a disk into a disk drive on the Atari and turn it on, this is basicly
the same as when you start an Emulator with the .ATR file on the
command line. That's what they are, disk images. They contain all the
data copied straight from a floppy disk, except for the first 16 bytes
which are data pertaining to the size of the "floppy image".
If you are using XLit or Xformer just include any bootable ATR file on
the command line, and away you go... You can specify up to 8 atr files
too, they simply appear as drives 2-8 when the emulator is running.
If you want to copy files from the PC hard drive into a disk image,
simply specify them as you would an ATR file, and they will show up as
a disk with only that file in it. You can then copy it into another
disk image and load it from DOS when you want to run it.
If you want any more help just gimme a email ok?

Steve.

ps. don't let others worry you about posting a question, their just
jealous :)

>

This sounds like a Windows 95 problem. I don't use W95, but it's my
understanding that you need a device driver for W95 to actually use a
joystick? If this is the case I'm sure that there would be a WEB site
that has the necessary driver files for you. Try using Lycos
(www.lycos.com) to search for "device drivers" or something similar.

Hope this helps somewhat....

Nope, he's completely right ! I don't know, why but f.e. in germany they sold lots of 800 XE computers. Maybe it was never released in other places than europe. I own one and it's scematically the same as an 130 XE - but the second bank of RAM and the second MMU-chip are not installed.

>Forward barely moves the right spindle and Play does absolutely
>nothing. It doesn't even make any motor noise at all!
>
>I don't have it (the 410) plugged into anything except the AC outlet.

Don't have any schematics to it, but maybe I can help. (This is from memory so I might not remember everything.) The spindle drive is definitely a mechanical problem. You might want to clean the drive tire or the rim on the spindle. If the tire is worn out you might have to scavenge another 410 for parts.

As for PLAY mode, the 410 (and 1010) is designed NOT to run unless the computer commands it. There is a line in the SIO labeled MOTOR GO that when asserted starts the recorder running. This line is controlled from address $D302 (54018 decimal from BASIC), bit 3, which is "active-low" (0 turns on, 1 turns off). To test it and make sure it works, do this:

from the READY prompt:
POKE 54018,52 (Do not use any other number, or it messes up several things)
The motor should start running.

POKE 54018,60

The motor should stop.

Hope this helps, let me know otherwise. dB^)

I'm sorry but I don't think that Matthias's response was offending.
He just asked for more details and please take a look at the poster's
domain. He is German ! For us it's sometimes a bit tricky to find the
right words. We don't have the "inner feelings" like native speakers.
E.g. English is my 3rd foreign language and I have learned most on the
Net.
I think it's similar for Matthias.

Bye,
Markus

2291. wish to all DOS/program developers

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-11 00:00:00 UTC
From: Matthias Belitz <matz@kawo2.rwth-aachen.de>
Message-ID: <3325D3A9.635C@kawo2.rwth-aachen.de>
Source record: 75027

Hallo !

Here is another great wish of mine, inspired by the usage of the German
130 XE-Ass.
If you develop new programs dealing with directories, have a look at the
different output scemes for directories by My-DOS and Sparta-DOS.
The problem I have is the following:
The program (130 XE Ass) was written for MyDOS, so it's
file-selector-box expect the ":" before the name to identify
directories. But SPARTA-DOS put an inverse "DIR"-extender to mark an
directory in the "DIRS" (compatibility)-mode. So this program will not
recognize subdirectories.

So my wish to further development of DOS:
Please implement the MyDOS-sceme for the compatibility-mode for the
following reason:
- Programs written especially for SPARTA will use the special
SPARTA-command every time to get time/date feature I think, so this will
not cause any incompatibilities with such programs.
- Programs written for MyDOS get the chance to work too, then.

Then please note that there are different CIO functions for loading and
starting files, but both support this feature.

Thanx, Matt

Hey everyone,

I'm an Atari fan from way back, and I'm glad to see that people still think they are worthy machines to use. I enjoy reading all the technobabble that I had no access to when I owned an Atari. Being the only kid in town who owned an Atari, I had to rely on Compute! and ANALOG/Antic (when I could find them) to get progs and advice. Thanks for bringing back some cool memories.

Source record: 75031

Hello I was wondering if anyone out there would tell me how to get a DD
.XFD file running? I have a couple emulators, Xformer and Xlit and
neither of them will load the MYDOS.XFD which is in DD?

WHat am I doing wrong? Also, does SpartaDos work on either of these
emulators???

In an article dated 9 Mar 1997 18:04:10 -0500, someone named Daniel Klugh says...
>: Off the top of my head, I can think of a couple fixes: Hyperspeed handler
>: for my Atari, Ensure that data compression, etc.. is turned OFF on the
>: modem.
>
>What's HyperSpeed.

It's an E: accellerator - ups speed by around 50-75% in text modes. I've burnt it into an EPROM, along with the fast math routines and a GR.0 screen dump. No more international character set, but I've still got about 700 bytes free for more add-ins.

The better guess is that the 130XE has a memory problem, This would cause the machine to but up in the "SELF-TEST" mode. Ever block of the memory test should turn green when it is tested. It will turn RED if it is bad. The Self-test mode with continue to cycle over and over if left unattendant.

The Atari Laser printer was designed for use with the ST line of computers, and would be of no use to you as an 8-bit user. They (the laser printer) relaid on the raw computing power of the 68000 processor and the memory of the ST to do the job. If you really want a nice cheap laser printer get the Sharp JX-9500 or the TI Microlaser Plus (both are the same machines) up to 8 megs memory onboard (optional) the use of Postscript (optional) and a Scsi hard drive to hold all your new fonts (optional), and it does work on the 8-bit the ST or an Apple of god forbid the IBM

Since this was sent to 3 6502-specific newsgroups, and
comp.arch.embedded, I'll assume the foolish reply came from
comp.arch.embedded.

See Western Design home page for more info on modern 6502 chips
(fully non-static, up to 20MHz, microcontroller versions with several
VIA's and parallel ports, 192 bytes RAM, and ample room on the mask for 8K
ROM.
But the question is, what microprocessor are you thinking is that
much better, and how many transistors does it require to do what the 6502
can do? Keep in mind that the more real-estate your chip wastes, the less
is available for adding other circuitry to the same mask for single-chip
embedded solutions.

Virtually,

I agree - it's really a good loader, however, is there an easy way to
invoke -nobasic and -lock60 (NTSC) without going into reg.? I went into
the xlit.ini file, and added it next to -modex, but that didn't seem to
do anything. Thanks for any help.

Source record: 75112

My whole understanding of newsgroups like this is for information. I don't know something, I ask a question, and someone with the knowledge posts a nice and freindly response. I have just started looking into Atari 8-bit emulators since the 800 XE was my first computer eons ago. I don't have a clue as to what to do, how to load a file, etc. And I am certainly not savvy enough to know the difference between atr and xfd files. Of course I am 39 so maybe it has something to do with maturity. Could we please have a group where it's safe to ask a question that does not get some 15 year old geek attitude answer. I am now afraid to ask any questions due to Matthius Belitz's snotty attitude. Let me know this is not the rule.

Sincerely,
Nick Nova

DOCUMENTS ONLY

ATARI ,INC. Incentive Unit Agreement. 1000 units. This is similar to a stock certificate (looks like on with the fancy border). This is about an 8 1/2 by 11" certificate, which is the official

document of the "Atari Phantom Stock Appreciation Incentive Plan." This was Warner's phony version of stock options for Atari engineers. After the VCS division programmers started to quit and form their own competing companies, (Activision and Imagic), management panicked and gave those guys bonuses and royalties. This is what they gave us. I tried to change divisions, but found out management had a secret agreement with each other not to allow division changes (the other division was the coin-op division). This certificate was issued on July 9, 1982 and was signed (stamped) by Raymond Kassar, the soon to be disgraced CEO who was caught selling his Warner stock a few days before the big announcement that Atari earnings were in fact losses...big losses. The value of these share were to be based on Atari Earnings and the market price of Warner stock, and the 1000 units were vested a few hundred each year through 1987. I quit in Jan. 1983, soon after I collected my X-mas bonus. Todd Fry, the programmer who did "Flickerman---I mean Pac-man" for the VCS (2600) collected a hair less than $1 million in royalties. He got the assignment because all the other programmers all wanted to write their own games and was 6 months along with the project when management came out with the royalty plan.
Mint

WEST magazine, San Jose Mercury News, Sunday Magazine,
November 6, 1983. "WHAT WENT WRONG AT ATARI, Lessons for the Silicon Valley" is the cover story. Artistically enhanced Photo of Ray Kassar on the cover. This is a lengthy and in depth analysis of the history of Atari to date from a businessman's view of things.

COIN-OP CONSOLE PLASTIC TITLE
PLATES
I'm sure there is a more official way to describe these. They would
have been part of the game console, except they must have made too
many, so they sold them in the company store. They are all from 1 1/2
to 2 feet long and 5 to 6" wide, and are made of 1/4" plastic. They
have decals on the backside and are meant to have a light shining
through them to announce what game it is.

SKYRAIDER from 1977...this one has a little bit of the paint
(decal on back) chipped off. Good

BATTLEZONE from 1980....this one has a little bit of the paint
(decal on back) chipped off. Very Good

BATTLEZONE from 1980....this one also has a little bit of the
paint (decal on back) chipped off. Very Good

BATTLEZONE from 1980....this one is almost half the size of
the other two. Very Good

STARSHIP 1 from 1976
Excellent

SUPER BUG from KEY Games, copyright Atari, Inc. 1977
Good

BUTTONS, TRINKETS

ATARI VIDEO GAMES, "campaign button" style pin about 2.5 " in
diameter Excellent

Plastic 3" stick-on button. Works like a hologram. head-on it
says "ASK ABOUT THE..." Tilted slightly it says: "ATARI 5200" along
with the Atari logo. I have 2 of these
Mint

WOMAN OF THE YEAR. MS. PAC-MAN paper sticker. Nice graphic of
Ms. Pac-man. Crack'n Peel on back is intact. I have 4 of these.
Excellent

WICO COMMAND CONTROL. I SCORED AT CES. 3" metal pin-on button
Excellent

CENTIPEDE. A 2" long centipede made of 3 fuzzy balls with eyes
and antennae, stick-on paper on bottom, and a white ribbon which
says: "Centipede. New and only from Atari."
Mint

"ATARI" Official California License Plate. Yes, I had the
one, the only ATARI custom license plate. Except that I have 2 of
them. One is blue with orange letters, and had the registration
stickers March, 83 as the last one visible. Registration # is f2058788
in case you want to check me out through DMV. The other plate was
issued later. It is beige with blue letters, and the word "California"
in red letters and the words "The Golden State", in orange letters.
Last stickers are March 1985 and the DMV # is N3218896.
Considering these were on my van I can't call them "mint" even though
they look that good
Excellent

ATARI 2600 Special Items

GEMINI Video Game System from Coleco. Uses Game carts for the
Atari 2600. New in box, never opened. Says it includes Donkey Kong and
Mouse Trap carts. Originall priced by Pennys at $79.95, looks like I
got it on sale for $19.95Has a small puncture hole in the box.
otherwise----------Mint

ATARI 2600 KID's CONTROLLER. This is about 6x8" and plugs inta
joystick port. New but in a beat-up box. This square keypad has 12
rubber keys, 1-0 plus # and *.
Excellent

STARRAIDERS special pak. Includes 2 boxes. One is a "video
touch pad" which uses an overlay for use with this game. The other box
has the cart and claims to have "the Atari first edition action-packed
Comic Book by DC comics." the package also says "New Inside Vol.3." I
can't verify unless I break the seal, and I won't because this box has
NEVER been opened. Mint

2306. Re: Making bad sectors

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-11 00:00:00 UTC
From: noone@nowhere.com
Message-ID: <332501e9.2838675@news.injersey.com>
Source record: 75114

-have put up a web page with pictures describing how to create bad
sectors
-with a 1050 disk drive.
-
-The url is http://www.comland.com/~idavis/atari.html
-
-No gimmicks, just plain information.
-Hope this helps someone.

Yes, it helps me ruin my drives. (just kidding)
I guess if I needed to create bad sectors, I would use APE and .PRO
format to do so, but I'm much more likely to just remove the copy
protection instead. Its easier on the drive

> invoke -nobasic and -lock60 (NTSC) without going into reg.? I went into
> the xlit.ini file, and added it next to -modex, but that didn't seem to
> do anything. Thanks for any help.
First you have to change it, before you install it !
The section [Strings] must look as follows:
[Strings]
MARKUS="Markus Gietzen"
VERSION="XL-it V 0.18"
COMMANDLINE="-modex -nobasic -lock60"
DESDIR="Atari\XLit"
IMAGEDIR="Atari\Images"
REGINS="Atari-Image"
UNINSTALL="SOFTWARE\Microsoft\Windows\CurrentVersion\Uninstall\XLit"

```
And here is a second way, I did before writing the script:
How to make ATR-Images autostarting XL-it with Win95
```

1.Open the directory XL-it is located in.
2.Make a new pif-file for Atari.exe by right-clicking on Atari.exe and
choose "Verknuepfung erstellen"

("create link ?"; sorry, I don't know, how it is named in the English Version)
3.Right-click on the new Atari.exe - pif and choose properties. Give it a name and an icon of your choice.

4. Open the Explorer.
5. Choose "Ansicht" (View ?), then "Optionen" (options ?), then the register card "File types".
6. Choose "New Type", then use a description of your choice, set extension to "ATR".
7. Choose "New" below the actions, then you can set a name of choice for the action. Set your pif-file as action (with full path).
Then add the switches you want (f.e. -nobasic) and then add %1%, so that XL-it get to know, which file to load.
f.e C:\atari\xlit\xlit.pif -nobasic %1%
Thats all and should work.
Tip 2:

Do this procedure from part 7 again and set another command, adding as action the same, but with another file name as first parameter.
So you can start an ATR with a DOS as disk 1 and the selected ATR as disk 2.
f.e C:\atari\xlit\xlit.pif -nobasic c:\atari\images\gamedos.atr %1%

If you have XL-it installed with the script, an entry "ATR" alredy exists. So you can start at (4) and skip (6).

Enjoy it
Matt

Source record: 75116
Cross-posted to: comp.sys.cbm,comp.sys.atari.8bit,comp.sys.apple2.programmer,comp.arch.embedded

```
Hi there!

Someone asked about using the TCP/IP stack for reading device info
via WWW (i.e. the http port 80).

Well. I implemented a (buggy, very alpha!) little WWW server for the
OS/A65 operating system (which also runs on the C64).

It's now on oa-1.3.13b.tar.gz

See http://www.tu-chemnitz.de/~fachat/csa

so long
Andre

P.S.: It's really buggy - that's all I got together overnight...
I'm away from this project for a few weeks now, so I wanted to show
you before that

P.S.: Cool way to increase the WWW page hit count, isn't it ;-)
```

> Matthius Belitz's snotty attitude. Let me know this is not the rule.

Hallo !
Just have to say I�m sorry. I didn�t wan�t that. Seems that I have to
think over longer about my posts to this group.
Second, my english is not so good, so I often cant formulate exact, what
I want ...

Now to your question:
I guess that you were using xfd-files of atari-images ...
Now here the differences as I know:
At the beginning of the ninetees two wonderful programs were developed -
SIO2PC and XFormer. Both are running on PC and had to emulate
Atari-diskdrives as far. But how to store they went different ways.
XFormer uses xfd-files, plain files just contaning the raw data sectors
of an Atari Single Density or Enhanced Density disk. SIO2PC uses ATR -
Images containing an 16-byte fileheader, with the number of sectors and
the density stored in it.
So you can see the problem caused by xfd-files - you can guess the
density only by length - not so good.
If this is your problem, try some conversion program (f.e. "Imagic" by
Steven Tucker), maybe they better guess the density 8-).
Note : an Enhanced density atr file should be exact 133.136 bytes, an
xfd must exact 133.120 bytes
and be sure if using an ATR that they are named ".ATR" I think Markus
wrote, that anything else would cause, that XL-it use it as xfd instead.

So if you a new user, please read the "freqeuntly asked questions"
carefully, and if I�m remeber correctly, there should be one version for
emulator usage too.

Hope this helped and sorry again

Matt

2310. Re: TCP/SLIP for 6502

Wayland Sothcott (sothcott@sothcott.demon.co.uk) wrote:
: What applications have you in mind. I am wondering if something to serve
: HTML to a PC over a dial up connection. How about a BMS with HTML. Have I
: got the wrong end of the stick or am I on the right lines? You could have
: this in a place you visit infrequently and check the Alarms and Temperature
: and Ocupency of the building, all displayed neatly in the Browser. Do you
: also know SNMP?

Well. You challenged me. A simple, Alpha (what you get overnight)
WWW server is now included in a newer version (1.3.13b) of the
OS/A65 archive.
It serves files from a given drive and directory to the Web
(no directory listing, multiple connections at the same time
are broken blabla...)

When registering a filesystem process that can generate files on the fly
and keeps up system information / temperature in a building and other
stuff, this is probably what you want :-)

I'm away from the project for three weeks now, so be patient.

so long
Andre

2311. Re: Does Rainbow support a joystick?

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-12 00:00:00 UTC
From: mvh@worldnet.att.net
Message-ID: <3325f7b9.2966334@netnews.worldnet.att.net>
Source record: 75035

Windows 95 and NT Workstation 4.0 support joysticks out of the box.
Nothing extra is needed, unless you have a newer, special joystick,
which should include a driver to calibrate it properly. The only
joystick reference I saw on the Rainbow page was
something for the MAC. The only other thing Rainbow
for 95 needs is Direct X, which are special graphics
libraries from microsoft, and they are free. I think the
Rainbow Demo for 95 doesn't support sound or
joystick and other features. A shame. I hope this helps...

Mike

2312. Re: jellystone off the air?

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-12 00:00:00 UTC
From: noone@nowhere.com
Message-ID: <3325edf4.1392255@news.injersey.com>
Source record: 75036

On Mon, 10 Mar 1997 21:36:28 GMT, sidney@ch.twi.tudelft.nl (Sidney Cadot) wrote:

-
- Hi all,
-
- Anybody know when jellystone will be back online at
-ftp.hackerz.com? I can't get thru for one!
-
Whenever the sysadmin can restart the FTP server. I think he may have been unprepared for the flood of people using the site.

-Also, has anybody noticed that a lot of the files have extra bytes at
-the end (probably caused by transfer by xmodem or something)? This

On the atari all the files have this problem, the byte count is supposed to take care of it (when there are less than $7D bytes in the sector) but I know that this is not always the case. Error 136's abound!

-
-It would, I think, be a good idea if there were a list of all known
-game files, along with a checksum of their contents. It would be a
-good starting point if yellystone had such a file in each directory.
-
Possibly, but the files are fluid.... Many people have different versions of the same file, especially if they were like me who either (A) re filed the stuff or (B) are obsessive about saving disk sectors (albeit at expense of loading time) by running binaries through a program called "Bloc" which removes excess 00 00 00 00 ....etc. to save disk space.
Checksum will be different. Also, PLEASE, no one erase your old disks unless YOU'RE sure the archived image works fine. I cannot test 100% 1000's of pieces of software.

-YOGI, if you're reading this, and think this is a good idea, please
-contact me as I have written some nice programs which could be useful
-for this.
-
I would like to see the programs at any rate. Do they run on the PC or on the Atari?

yogi

>joystick? If this is the case I'm sure that there would be a WEB site
>that has the necessary driver files for you. Try using Lycos
>(www.lycos.com) to search for "device drivers" or something similar.

95 has built in joystick drivers. The problem is that Rainbow simply does not
support a joystick in its current incarnation. To get around this limitation,
you can use a device that allows keymapping such as the Gravis GamePad Pro.
Hopefully this will be fixed soon.

Only 2 disks were made of the Alternate Reality series. But check
this out, there will be a new version done by the original 2 authors
and others for a game called Alternate Reality Online! I think you
can find out more info at www.monolith.com and if that is not correct,
e-mail me at trashman@aci.net and I will get the correct URL for you!

Atari 800 My personal system. Complete with 2 Happy drives (one works, one needs a tune-up), Axalon Ramdisk, and Omnimon! debugger chip.. The 128 k Ramdisk takes the place of a 16 k memory board, and has wires soldered from it to another memory module. The Omnimon is piggybacked on another 16 k memory board, and has wires internally to the computer sonsole where a swich is mounted. All the power supplys and cables are included. AXALON RAMDISK 128K MEMORY SYSTEM by Axalon Inc (a Nolan Bushnell company). The manual is a xerox in an official Axalon 3 ring notebook. Floppy disk included OMNIMON! plus User's Guide. OMNIMON! is a resident machine language monitor (on a chip) which is useful for assembly language programmers. 13 xerox pages. OMNIMON! Installation Instructions. See above. 6 pages includes instructions for the version to use with the Axalon Ramdisk.

DOCUMENTS ONLY

ATARI ,INC. Incentive Unit Agreement. 1000 units. This is
similar to a stock certificate (looks like on with the fancy border).
This is about an 8 1/2 by 11" certificate, which is the official
document of the "Atari Phantom Stock Appreciation Incentive Plan."
This was Warner's phony version of stock options for Atari engineers.
After the VCS division programmers started to quit and form their own
competing companies, (Activision and Imagic), management panicked and
gave those guys bonuses and royalties. This is what they gave us. I
tried to change divisions, but found out management had a secret
agreement with each other not to allow division changes (the other
division was the coin-op division). This certificate was issued on
July 9, 1982 and was signed (stamped) by Raymond Kassar, the soon to
be disgraced CEO who was caught selling his Warner stock a few days
before the big announcement that Atari earnings were in fact
losses...big losses. The value of these share were to be based on
Atari Earnings and the market price of Warner stock, and the 1000
units were vested a few hundred each year through 1987. I quit in Jan.
1983, soon after I collected my X-mas bonus. Todd Fry, the programmer
who did "Flickerman---I mean Pac-man" for the VCS (2600) collected a
hair less than $1 million in royalties. He got the assignment because
all the other programmers all wanted to write their own games and was
6 months along with the project when management came out with the
royalty plan.
Mint

WEST magazine, San Jose Mercury News, Sunday Magazine,
November 6, 1983. "WHAT WENT WRONG AT ATARI, Lessons for the Silicon
Valley" is the cover story. Artistically enhanced Photo of Ray Kassar
on the cover. This is a lengthy and in depth analysis of the history
of Atari to date from a businessman's view of things.

Mint

COIN-OP CONSOLE PLASTIC TITLE PLATES

I'm sure there is a more official way to describe these. They would have been part of the game console, except they must have made too many, so they sold them in the company store. They are all from 1 1/2 to 2 feet long and 5 to 6" wide, and are made of 1/4" plastic. They have decals on the backside and are meant to have a light shining through them to announce what game it is.

SKYRAIDER from 1977...this one has a little bit of the paint (decal on back) chipped off.
Good

BATTLEZONE from 1980....this one has a little bit of the paint (decal on back) chipped off.
Very Good

BATTLEZONE from 1980....this one also has a little bit of the paint (decal on back) chipped off.
Very Good

BATTLEZONE from 1980....this one is almost half the size of the other two.
Very Good

STARSHIP 1 from 1976
Excellent

SUPER BUG from KEY Games, copyright Atari, Inc. 1977
Good

BUTTONS, TRINKETS

ATARI VIDEO GAMES, "campaign button" style pin about 2.5 " in diameter
Excellent

Plastic 3" stick-on button. Works like a hologram. head-on it says "ASK ABOUT THE..." Tilted slightly it says: "ATARI 5200" along with the Atari logo. I have 2 of these
Mint

WOMAN OF THE YEAR. MS. PAC-MAN paper sticker. Nice graphic of Ms. Pac-man. Crack'n Peel on back is intact. I have 4 of these.
Excellent

WICO COMMAND CONTROL. I SCORED AT CES. 3" metal pin-on button
Excellent

CENTIPEDE. A 2" long centipede made of 3 fuzzy balls with eyes and antennae, stick-on paper on bottom, and a white ribbon which says: "Centipede. New and only from Atari."
Mint

"ATARI" Official California License Plate. Yes, I had the one, the only ATARI custom license plate. Except that I have 2 of them. One is blue with orange letters, and had the registration

stickers March, 83 as the last one visible. Registration # is f2058788
in case you want to check me out through DMV. The other plate was
issued later. It is beige with blue letters, and the word "California"
in red letters and the words "The Golden State", in orange letters.
Last stickers are March 1985 and the DMV # is N3218896.
Considering these were on my van I can't call them "mint" even though
they look that good
Excellent

ATARI 2600 Special Items

GEMINI Video Game System from Coleco. Uses Game carts for the
Atari 2600. New in box, never opened. Says it includes Donkey Kong and
Mouse Trap carts. Originall priced by Pennys at $79.95, looks like I
got it on sale for $19.95Has a small puncture hole in the box.
otherwise----------
----------Mint

ATARI 2600 KID's CONTROLLER. This is about 6x8" and plugs inta
joystick port. New but in a beat-up box. This square keypad has 12
rubber keys, 1-0 plus # and *.
Excellent

STARRAIDERS special pak. Includes 2 boxes. One is a "video
touch pad" which uses an overlay for use with this game. The other box
has the cart and claims to have "the Atari first edition action-packed
Comic Book by DC comics." the package also says "New Inside Vol.3." I
can't verify unless I break the seal, and I won't because this box has
NEVER been opened.

Maybe someone should mention how all those Rockwell chipset modems have a
6502 core, as well as many of the Franklin pocket dictionaries and
translators... or that there's one company out there that will put the 6502
core in an ASIC along with whatever else you need running at up to 50
MHz...

The 6502 is hardly a dead processor, and it is finding new uses even today
in applications where low cost and efficient processing are key
requirements.

Source record: 75041

Thanks for the response. Now I remember I had the 130XE (I knew there was an XE in there somewhere.) The original author wrote to me and apologized and now I feel that I reacted to quickly. I just get stressed out with some of the newsgroups. They seem to be populated by children with nothing better to do than flame. Anyway, would you happen to know if I can run an EXE file? I found one on an ftp site for Atari of Archon, one of the games that destroyed my social life for all time. I don't know if it's for an emulator or not. It doesn't run by itself or with an emulator. I've tried XL-It! and PC XFormer. There's also alot of stuff in these emualtors about HD# and D#. I thnik I'm getting the hang of the disk drive emu but I'm not sure. And what do you do with the Hard Drive emu? Thanks for any info you care to send.

Hi, I have downloaded your program and I can't seem to get it to work. It just flashes and dumps me back in file selection. I'm very new to this emulation stuff although I was an Atari junkie in the early 80's with my 130 XE. Is this program to be used to run disk images from my hard drive or do I need some sort of Atari peripheral like a disk drive or something. I'm using both XL-It! and PC XFormer but neither seems to work with xfSIO. I tried the most basic config and autoexec but to no avail. Also, how do you run an EXE file if possible? I found Archon.exe on an 8-bit Atari ftp site but it does nothing but crash my system. Thansk for any input.

Ward, I can make up a set of Alien Voice Box disks. The current set only works on the org 800 because it wants port 3, so I was planning to dump the routines and change them to port 2. I think thats all thats needed.

There are others ways:S.A.M. is software only.
The SLCC magazine had an intro article on digitizing speech and saying it back using a joystick port. I have a much better input circuit here somewhere.
Analog and/or Antic had an article on building a speech synth with a couple of chips and and amp.

I'll work on the Alien VB mod and let you know when it works.

> Hi, I have downloaded your program and I can't seem to get it to
> work. It just flashes and dumps me back in file selection.

No problems here that can't be fixed by reading the TXT file, but as
I'm a nice guy here's some answers......

This is because you probably don't have enough BASE-RAM to hold the
shell and the emulator. Try only booting with HIMEM.SYS and your
soundcard drivers and you should have enough RAM. I find if I load
EMM386.EXE as well (yes, I know it degrades system performance) I can
load my soundcard drivers, cd-rom drivers, mouse, scanner, walking
machine, dish washer and electric toothbrush drivers and still have a
load of RAM free.

> I'm very new to this emulation stuff although I was an Atari
> junkie in the early 80's with my 130 XE.

Emulation can be quite confusing to the newbies. Asking for help on a
simple point can get you seriously flamed in other groups, but I
think you'll find that in comp.sys.atari8 we're all quite
friendly.... certainly much more so than in comp.emulators.misc! Ask
and you'll probably get an answer.

> Is this program to be used to run disk images from my hard drive
> or do I need some sort of Atari peripheral like a disk drive or something.

The answer is yes, and no sort of yes. Yes, you can use it to run
disk images from your hard drive with XL-it! and XFormer, but you can
also use it with a cable connected to a real atari (or 1050/810 disk
drive) with APE, SIO2PC and PCXFormer 3.6. APE & SIO2PC are
peripheral emulators for the Atari8 which allow you to use your PC
hardware as virtual disk drives/hard drives/printers/modems etc on
your 8bit.

> I'm using both XL-It! and PC XFormer but neither seems to work with xfSIO.

After it's in the file selector press the 'Z' key (Does this work in
Germany, or you you have to press 'Y'?) and a configuration screen
will appear. Check the following paths:

[1] Path to XFORMER.EXE:

This is where you have installed Emulators Inc PC XFormer
eg, C:\ATARI\PCFX\XFORMER.EXE

[4] Path to XLiT!:

This is where you have installed Markus Gietzen's XL-iT!
eg, C:\ATARI\XLIT\ATARI.EXE

***If you don't tell xfSIO where the emulators are it can't run
them***

To test it it's ok press F1 and F4 - both emulators will run, athough
XLit won't autostart (as of 0.18) but will drop into it's own shell.
Simply select Emulator (I think) from the first menu!

> I tried the most basic config and autoexec but to no avail.

See memory management. But check the PATH settings first, it may be
just that!

> Also, how do you run an EXE file if possible? I found Archon.exe on an 8-bit
Atari ftp
> site but it does nothing but crash my system.

ARCHON.EXE is (probably) an Atari 8bit EXE file and not a PC file.
You need to run it in an Atari emulator. Do do this try the following
(and I am not suggesting this is the only way, just a simple, easy to
describe way!)

1) Make sure you have XLit 0.18 (or above) and a copy of the needed
ROMs.

2) Download a copy of DOS2.5 or DOS 2.0 from somewhere (Jellystone FTP?)
as an .ATR file

3) Run xfSIO after you have it all set up.

4) Set the DOS.ATR disk in drive D1: by highlighting it in the file
selector and pressing '1'. The filename will appear in the D: table.

5) Press 'H' to toggle H: mounting.

6) Change into the path that contains ARCHON.EXE in the file selector
and press '1' again. The path will appear in the H: table.

7) Run XL-iT! and start the emulation with BASIC *DISABLED*

8) From the DOS menu select 'L' Load binary file and type:

H:ARCHON.EXE

it should then run.

> Thansk for any input.
Thanks for taking an interest..... ;')

Answer e-mailed and posted to group.

PS: Anyone else confused by xfSIO? Should I write a more up-to-date
manual with complete examples?

The 6502 is also the basis for the Mitsubishi 8 bit family which is I
believe one of the highest volume microcontroller families in the
world. The family has an enhanced 6502 instruction set.

The reason the 6502 is so well suited for use in ASIC's, etc. is that
it really is a trivial architecture. I wouldn't be surprised if some
professor somewhere isn't using this as a homework assignment in
a digital design class:
"Design a 6502"

Thats ok Steve, it must have been that little "ape" war that occurred?
And actually it was more than just the incompatabilities, it was also
to do with saying (and I paste)

>If you go for incompatible-but-cool, you could make disk images
> as big as you want, gigabytes, terabytes. Huge 10k sectors, a decent
> FAT system, growing subdirectories, etc.

Ok it would be cool :)

I was just asking (or maybe I should have rephrased) if it would be
possible to use the extra 64 filenames, thats all... Yogi was first
with the question about ANY sized dir....
I really can't see why this would be so incompatible, I mean... any
decent DOS recognises what density a disk drive is in, so why can't it
use all the space it has allotted? Ok, most software is based on a
single density disk, so I figure that not many people actually use
double density for storage. I don't, simply because the disks get full
of filenames before they are actually used up...

Ahh, anyway, I like MyDOS just the way it is :)
I don't think that trying to change it would make it any better....

Getting on to another point ---> :)
I'm using APE (yes, great program Steve, oops- not registered :) maybe in a couple of weeks when I can afford it - moving house at the moment). sorry.... back to the point :)
ok, set up APE to use US doubler speed, and having problems with SuperDOS 2.9. It boots and loads the SDOS.SYS, and then when it tries to get a drive status from all the images I have loaded, gets NO status from any drive and sits there looking stupid. After RESETing it gets the drive's status and is happy again. Then I try to access an image and again it loses the drive status. If I have the APE+ mode set, there are no problems whatsoever. Of course not being the REG version disk writes are disabled in APE+ mode, so I don't really know if there are any other problems related to writing a disk. As 2.9 is my favorite DOS, (besides MyDOS of course) I hope to be able to use it again...

Sorry for the long winded reply....

Steve. (another point, just so we don't get mixed up, I will be signing "Stevo" to all my postings hereafter)

p.s. Thanks for APE, it really is a great program. I really will register it one day. I can't wait for that day :)

From: idavis@comland.com
Message-ID: <858191664.1655@dejanews.com>
Source record: 75055

I was wondering if someone could point me to some information about burning eproms for the 400/800/xl cartridges. I was wondering what types of eproms do I need, and probably any other general information that can be found. I am working on getting a burner, and my father is an electronic technician who has burned eproms before for other equipment so I will not be totally in the dark, but I would like to have a little information beforehand. I have taken the cover off of a couple of spare atari carts that I have, and the chips are already socketed, so no need to perform that operation, but I found there are two chips, a left and a right. I assume one is odd, and one is even, and being new to the chip making process, I might be totally wrong. I am dying to get a burner, put my own program on a cartridge, put it in, and watch it run. I guess some people have the weirdest dreams, or maybe I need to get a life. Thanks in advance for any help.

That's for XL-it!:

1. Create a directory under MS-DOS where you want to place your
BINs,EXEs,OBJs etc. to (if you don't have it already).
2. Enter XL-it!'s userinterface
3. Disable BASIC (that's needed by most prgs.)
4. Put DOS 2.5 in D1: (MyDOS and SpartaDOS don't work properly with H:)
This file is called "dos25.xfd" or similar.
5. Select the directory from 1. as H1:
6. Enter the emulation
7. DOS 2.5 appears
8. L + RETURN
9. H1:foo.exe

Hope it helps,

Markus

PS: Of course you don't have to do that everytime. The settings
will be saved. Next time you can directly enter the emulation.

2337. binary executable format

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-13 00:00:00 UTC
From: sidney@ch.twi.tudelft.nl
Message-ID: <3327c768.589727@news.tudelft.nl>
Source record: 74971

Hello all,

As I'm writing some Atari DOS binary executable format utilities I
am curious about the exact format and meaning. As I have no DOS
reference I'd like you to have a look at the following algorithm,
which implements (I think) the DOS "load binary" command:

(1) put address to RETURN TO DUP routine in RUNAD ($2E0,$2E1)

(2) open file; CHECK FOR FAILURE --> ERROR if FAIL

(3) read first 2 bytes; CHECK FOR FAILURE --> ERROR 136 IF FAIL

(4) first 2 bytes are $FF,$FF? NO --> FAIL with ERROR 136

(5) read 2 bytes BLOCKSTART ERROR if FAIL

(6) read 2 bytes BLOCKEND ERROR if FAIL

(7) put address of an RTS into INITAD ($2E2,$2E3)

(8) read BLOCKEND-BLOCKSTART+1 bytes from BLOCKSTART to BLOCKEND
ERROR if FAIL!

(9) execute sub pointed to by INITAD (most of the time, just RTS)

(10) if END-OF-FILE, JSR (RUNADR)

(11) read 2 bytes into BLOCKSTART; ERROR on FAIL

(12) bytes are $FFFF? goto (5)

(13) otherwise, goto (6)

Is this about correct? Anybody have suggestions for improvements?

Kind regards, Sidney

Hi Yogi,

>-Also, has anybody noticed that a lot of the files have extra bytes at
>-the end (probably caused by transfer by xmodem or something)? This

>On the atari all the files have this problem, the byte count is
>supposed to take care of it (when there are less than $7D bytes in the
>sector) but I know that this is not always the case. Error 136's
>abound!

I've ftp'ed all executables from jellystone so I -could- start to mend
these broken files. I will post another message to inquire if anybody
knows something about the binary executable format that I don't know,
to check if my notion of a mended file is ok.

>-It would, I think, be a good idea if there were a list of all known
>-game files, along with a checksum of their contents. It would be a
>-good starting point if yellystone had such a file in each directory.

>Possibly, but the files are fluid.... Many people have different
>versions of the same file, especially if they were like me who either
>(A) re filed the stuff or (B) are obsessive about saving disk sectors
>(albeit at expense of loading time) by running binaries through a
>program called "Bloc" which removes excess 00 00 00 00 ....etc. to
>save disk space.

For this case, however, it is quite possible to make a program which
"checks" two files against each other to see if they are actually the
same, apart from the compressed zeros. If so, it would be possible to
designate the file with the smallest amount of blocks as the
"original", discarding the compressed one (as for the purpose of
archiving, it's most likely to be the original).

Another possible problem is that guys like me thought, once upon a
time looong ago, it was cool to put your name somewhere in somebody
else's program. By careful examination of different versions of
executables, however, it is probably possible to decide on the
original.

>I would like to see the programs at any rate. Do they run on the PC or
>on the Atari?

They run on the PC or UNIX. My proposal is not to use a "standard"
program like "md5sum" because

(1) it will generate 128-bit checksums, written in 64 ASCII bytes.
this is overkill.

(2) it does not display file length, which is a very neat feature to have.

I have written a (small) program in GNU C (can be run on DOS machines too, by means of the DJGPP / GNU C compiler which produces lists like these (format: LENGTH/CRC-32/PATH+NAME)

```
(.....)
14666 FA5C2D23 /home/atari/ftp/yogi/images/games001/preppie2
14801 B4FFD5A1 /home/atari/ftp/yogi/images/games001/preppie
30929 07961793 /home/atari/ftp/yogi/images/games001/spaceegg.s
21269 68B90E17 /home/atari/ftp/yogi/images/games001/boulderd.sh2
16907 6F0A0842 /home/atari/ftp/yogi/images/games001/crystalc.ast
5232 5FEE892C /home/atari/ftp/yogi/images/games001/avalanch.e
16733 96A22D93 /home/atari/ftp/yogi/images/games001/berzerk
12408 49F686C3 /home/atari/ftp/yogi/images/games001/frogger.ii
19852 4C8AD6BC /home/atari/ftp/yogi/images/games001/frogger
16524 4F146676 /home/atari/ftp/yogi/images/games001/joust
(.....)
```

The fun of this format is, that it is very easy to use standard tools like SORT, GREP, UNIQ and the like to extract interesting information. For example I've been able to extract in about 3 minutes, the following inconsistency list between your MEGA-IMAGES and your BINARIES (for example: files which are on your images but not in your binaries directory):

```
32 B6F13DE4 binaries/EXE-StoZ/Unicum.txt
42 51424769 binaries/EXE-JtoR/Rollem.txt

Tony,
The 850 is a relatively slow speed I/O box that connects to the SIO
port of the 8-bit Ataris. It gives you RS-232 (basically the same as
that on a PC (db-9), but in a sligftly different pin-out from the PC)
and a uni-diredtional db-15 parallel printer port. The unidirectional
part means you don't have full duplex communications with devices on
that port--such as an HP deskjet or Laserjet printer. This is generally
not a problem, but you can't get many of the error codes back, like
paper out, ink low, paper jam... Other than that, it is a very useful
interface.

Got off the phone with Video 61 (612)462-2500

He has the following (or did) new 8 bit carts - apparently
shelved and never released by Atari.

Tower Toppler (XE) - more levels than the 7800 version
Deflector (XE)
Superman 3 (XL/XE)
Kangaroo (XL/XE)
Berserk (XL/XE)
Letter Tutor (Lightpen/XL/XE)
Stargate (XL/XE)
Pacman JR (XL/XE)
Animated Puzzle (XL/XE)

Looks like Atari is cleaning house and finally releasing
some of this stuff.

You can try Radio Shaft. If they don't have them in stock you might still
be able to special-order them. Of course, it's been a while since I've
bought any so this may be old information...

ANALOG once published an article/program on getting 128 directory
entries on a DD disk -- probably in DOS XL.
And there was another program that used the extra space at the end of
an enhanced density disk to store file descriptions; I used that one
for a while before I switched to Sparta.

Emulators don't read Atari floppies - tough luck.

>Even if we get a new floppy drive, could these files somehow be
>transferred to a PC, into
>another program? (even just as a .txt file?)

Possibly... If your mother used Atari Writer, it should be quite easy
(if you're able to get your files to the PC).

>If anyone has done this or has any ideas, any help is greatly
>appreciated.

Ok, the story is this. If your mom used single density disks, you're
OK. If she used enhanced density you're in trouble. The only way to
find out is to try the following procedure (which is, as a matter of
fact, partially described in the FAQ):

(1) Get the program ANADISK. Version 2.07 is available in the Umich
atari archive. However, I had trouble with this version -- for some
reason it barfed on initialising the floppy controller of the PC.
Therefore, try Anadisk 2.05 or Anadisk 2.06 (try to find it using
archie or something).

(2) Get the program DEANA.COM. In the UMICH archive.

(3) Use ANADISK to read the single density floppy. The procedure is
outlined in the FAQ. Also type DEANA.COM without params to get some
help.

Note that in my experience, you have the best chance of getting things
to work is by using floppies which are formatted single density on
BOTH sides.

(4) Use DEANA.COM to make a .XFD image.

(5) Get the relevant files out of the image (f.e., by using Imageman -
again: see FAQ!)

(6) Translate the atari-ascii to standard ascii. Most notably, the $9B
character should be turned into a newline on the PC.

(7) You may now be ready (but you probably got stuck somewhere in the middle).

In other words: unless you are both VERY lucky (your mother using SD floppies and all that) and QUITE computer-savvy (finding Anadisk, translating ASCII codes), you're in trouble.

In that case, probably the best thing is to find somebody with an Atari who is willing to help. I would be, except I'm in Holland. If you're serious about it, consider mailing the floppies to me -- I'd be happy to do it for you and send the files back over e-mail. For a few dollars you'd be out of trouble.

Regards,
Sidney Cadot

I picked up 2 boxed Atari light pens a couple weeks ago. They come with
the Atari Graphics cart. I'm pretty sure you have to have the light pen
to use the cart, as there is no mention of any other controllers in the
manual. Anyway, both carts have the standard 8 bit "silver" labels
(second generation?). Sounds like you might have a proto. If you send
me a description of at least the starting screen I'll compare it with
mine. Or I can e-mail you a scan of the screen from the manual.
And...while looking in the box at the cart, I just noticed it has a
copyright date of _1983_. Hmmm, curiouser and curiouser.

Yes and No.. the 850 interface will allow you to use non-Atari modems and printers. (I beleive 19,200 bd modems, I know at least 9600 for sure. and Centronics parallel style pritners (epson, panasonics dot matrix) I don't think you can get a laser or bubble jet working on an 8bit, that would be agood question to ask. The 850 interface cannot allow you to run a hard drive though. For that reason I would recommend Bob Puff's Black Box. It allows you to run SASI or SCSI hard disks, 19,200 modems and Centronics printers.. also the 850 was prone to errors in transfers (well the early ones anyway..) The 850 is a VERY old piece of hardware. Probably turned green with age..

2353. Classic Computers List

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-13 00:00:00 UTC
From: bill@booster.bothell.washington.edu
Message-ID: <5g7k1g$qtl@nntp1.u.washington.edu>
Source record: 75061

Please excuse the preceding screwed up posts - I'm using
an unfamiliar editor.

Hi all.

I have just started a new discussion list for people who
collect/maintain old computers. If this kind of thing
interests you read on...

CLASSICCMP - The "Classic Computers" Discussion List

NAQ (Never Asked Questions) 0.1

What is it?

This list is for the discussion of Classic Computers -
primarily for those people who collect and restore
old machines. It is brand new - no subscribers yet
so sign up. The collection and restoration of computers
is becoming a big enough hobby that I felt a need for
a place to talk about it.

What is a classic computer?

Well that's hard to say but since I created the list I'll
do it anyway. A classic computer is a machine that has not
been produced for 10 years or more. It's an arbitrary
definition but at least uncomplicated.

What are the guidelines?

The list is designed for discussion of collecting, restoring,
and maintaining old computers. I'm not going to be heavy
handed with restricting discussion. I'd just like it to be
clear that the list is not the proper place for discussion
of technical problems with the standard PCs and Macs (other
than the really old stuff). Anyone can lurk - if you're
going to post, just use your own good judgement.

This IS NOT and will NEVER BE a list for discussion of "which
computer is best?" and anyone who posts the ubiquitous "why
don't you just go buy a PC you moron" will be immediately
unsubbed.

Beyond this - have fun! That what keeps us going with these
old machines.

How do I subscribe?

Subscribing to this list is slightly more challenging than
most. Read the instructions below.

1. Send a message to listproc@u.washington.edu with the line

subscribe CLASSICCMP your-address

in the body of the message.

2. Send a message to bill@booster.u.washington.edu introducing
yourself and explaining why you wish to be added to the list.

That's it. I require the letter of introduction for several
reasons. 1 - Only people who really want to be on the list
will bother. 2 - If you can't follow directions I won't hear
from you. 3 - It helps me get an idea of who's on the list
and what they hope to get out of it. 4 - I like to respond
personally to new members rather than run a robot list.

Atari 800 My personal system. Complete with 2 Happy drives
(one works, one needs a tune-up), Axalon Ramdisk, and Omnimon!
debugger chip.. The 128 k Ramdisk takes the place of a 16 k memory
board, and has wires soldered from it to another memory module. The
Omnimon is piggybacked on another 16 k memory board, and has wires
internally to the computer sonsole where a swich is mounted. All the
power supplys and cables are included. AXALON RAMDISK 128K MEMORY
SYSTEM by Axalon Inc (a Nolan Bushnell company). The manual is a
xerox in an official Axalon 3 ring notebook. Floppy disk included
OMNIMON! plus User's Guide. OMNIMON! is a resident machine language
monitor (on a chip) which is useful for assembly language programmers.
13 xerox pages. OMNIMON! Installation Instructions. See above. 6
pages includes instructions for the version to use with the Axalon
Ramdisk.

DOCUMENTS ONLY

ATARI ,INC. Incentive Unit Agreement. 1000 units. This is
similar to a stock certificate (looks like on with the fancy border).
This is about an 8 1/2 by 11" certificate, which is the official
document of the "Atari Phantom Stock Appreciation Incentive Plan."
This was Warner's phony version of stock options for Atari engineers.
After the VCS division programmers started to quit and form their own
competing companies, (Activision and Imagic), management panicked and
gave those guys bonuses and royalties. This is what they gave us. I
tried to change divisions, but found out management had a secret
agreement with each other not to allow division changes (the other
division was the coin-op division). This certificate was issued on
July 9, 1982 and was signed (stamped) by Raymond Kassar, the soon to
be disgraced CEO who was caught selling his Warner stock a few days
before the big announcement that Atari earnings were in fact
losses...big losses. The value of these share were to be based on
Atari Earnings and the market price of Warner stock, and the 1000
units were vested a few hundred each year through 1987. I quit in Jan.
1983, soon after I collected my X-mas bonus. Todd Fry, the programmer
who did "Flickerman---I mean Pac-man" for the VCS (2600) collected a
hair less than $1 million in royalties. He got the assignment because
all the other programmers all wanted to write their own games and was
6 months along with the project when management came out with the
royalty plan.
Mint

WEST magazine, San Jose Mercury News, Sunday Magazine,
November 6, 1983. "WHAT WENT WRONG AT ATARI, Lessons for the Silicon
Valley" is the cover story. Artistically enhanced Photo of Ray Kassar
on the cover. This is a lengthy and in depth analysis of the history
of Atari to date from a businessman's view of things.
Good

MICKEY IN THE GREAT OUTDOORS. From Walt Disney Personal Computer Software. in Dust Jacket, plus manual and box. The box is about 8x10", plastic, with Mickey on both sides (and as with many games from this period, is the best part of the package).
Mint

COIN-OP CONSOLE PLASTIC TITLE PLATES

I'm sure there is a more official way to describe these. They would have been part of the game console, except they must have made too many, so they sold them in the company store. They are all from 1 1/2 to 2 feet long and 5 to 6" wide, and are made of 1/4" plastic. They have decals on the backside and are meant to have a light shining through them to announce what game it is.

SKYRAIDER from 1977...this one has a little bit of the paint (decal on back) chipped off.
Good

BATTLEZONE from 1980....this one has a little bit of the paint (decal on back) chipped off.
Very Good

BATTLEZONE from 1980....this one also has a little bit of the paint (decal on back) chipped off.
Very Good

BATTLEZONE from 1980....this one is almost half the size of the other two.
Very Good

STARSHIP 1 from 1976
Excellent

SUPER BUG from KEY Games, copyright Atari, Inc. 1977
Good

BUTTONS, TRINKETS

ATARI VIDEO GAMES, "campaign button" style pin about 2.5 " in diameter
Excellent

Plastic 3" stick-on button. Works like a hologram. head-on it says "ASK ABOUT THE..." Tilted slightly it says: "ATARI 5200" along with the Atari logo. I have 2 of these
Mint

WOMAN OF THE YEAR. MS. PAC-MAN paper sticker. Nice graphic of Ms. Pac-man. Crack'n Peel on back is intact. I have 4 of these.
Excellent

WICO COMMAND CONTROL. I SCORED AT CES. 3" metal pin-on button
Excellent

CENTIPEDE. A 2" long centipede made of 3 fuzzy balls with eyes and antennae, stick-on paper on bottom, and a white ribbon which says: "Centipede. New and only from Atari."
Mint

"ATARI" Official California License Plate. Yes, I had the one, the only ATARI custom license plate. Except that I have 2 of them. One is blue with orange letters, and had the registration

stickers March, 83 as the last one visible. Registration # is f2058788
in case you want to check me out through DMV. The other plate was
issued later. It is beige with blue letters, and the word "California"
in red letters and the words "The Golden State", in orange letters.
Last stickers are March 1985 and the DMV # is N3218896.
Considering these were on my van I can't call them "mint" even though
they look that good
Excellent

ATARI 2600 Special Items

GEMINI Video Game System from Coleco. Uses Game carts for the
Atari 2600. New in box, never opened. Says it includes Donkey Kong and
Mouse Trap carts. Originall priced by Pennys at $79.95, looks like I
got it on sale for $19.95Has a small puncture hole in the box.
otherwise----------
----------Mint

ATARI 2600 KID's CONTROLLER. This is about 6x8" and plugs inta
joystick port. New but in a beat-up box. This square keypad has 12
rubber keys, 1-0 plus # and *.
Excellent

STARRAIDERS special pak. Includes 2 boxes. One is a "video
touch pad" which uses an overlay for use with this game. The other box
has the cart and claims to have "the Atari first edition action-packed
Comic Book by DC comics." the package also says "New Inside Vol.3." I
can't verify unless I break the seal, and I won't because this box has
NEVER been opened.

2355. Wild & Wacky Atari Auction (Update #11)

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-13 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970313061600.BAA20112@ladder01.news.aol.com>
Source record: 75063

```
Wild & Wacky Atari Auction (Update #11)

Rules and stuff:
----------------
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

```
Wild & Wacky Atari Auction (Update #11)

Rules and stuff:
----------------
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

2358. I have some questions-800XL

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-13 00:00:00 UTC
From: Citori@shotgun.net
Message-ID: <3327A198.27D9@navix.net>
Source record: 75066

Hello,

My mother has an Atari 800XL computer. About 10 years ago, she typed up a whole family
tree with Atari-writer, and saved it to 5.25" floppies. Now, we still have the computer, but
we think the floppy drive has gone bad. I *think* it's a 1050 but I'm not at home to look.
What are the options to get this info back?
I see two ways:

1. Buy a new floppy drive and go from there.
2. Use one of the emulators to read the floppies with a PC.

Is #2 possible? Would I have to have an emulator and the atariwriter software on the PC?
Even if we get a new floppy drive, could these files somehow be transferred to a PC, into
another program? (even just as a .txt file?)

If anyone has done this or has any ideas, any help is greatly appreciated.

Thank you,

Mitch Mittelstaedt

...I can't believe this... It's like the dream come true.. Back in the olden days of Atari greatness <supremacy?> we would have been laughed at for envisioning such a thing as the WWW...

I still use my Atari 800XL <or did, before I packed it up and moved to a smaller apartment in January> and have recently written a few programs in Turbo BASIC, including an assembler/disassembler <A symbolic assembler, in BASIC... I couldn't get my old MAC/65 disk to work!>

If I can get the time and necessary hardware I will share these programs with anyone interested... Please don't E-mail me, every time I try to read mail I get kicked out of Netscape Nav. <new to this internet thing>

Just got a couple of emulators working.. Is anybody else having problems with IMAGEMAN? Whenever the directory selection window scrolls, the program crashes...

You can have a USR with no arguments. e.g. X=USR(1536) will
not push anything onto the stack except the number of arguments
itself (zero). So at the very least, you always have *one* PLA.
The address of the ML routine is not counted as an argument.

Incidentally, I have a vague memory of 212/213 receiving the
address of the ML routine when the USR is actioned by BASIC;
so if you *really* wanted the address you could use 212/213.
(It would also mean that if you did not change 212/213 then
X, in the example above, would take the value 1536)

Mitch:

You could find another Atari user in the area to read the disks and upload
them
to a BBS, then download them into your PC. I'd recommend you contact some
other Atari users in your area and see if they can help you. Leave a
message in the base, or check your local library.

: -Tony

A simple fix for pens is to take pliers and pull the pen point out of the metal casing, fill the cavity up with ink, and push it back together. I've done it a number of times. I use whatever ink you can find at the work supplies stores, like Sheaffer, in a bottle. In a pinch you can suck ink from a cartridge and use it. Doing it is tricky; I use a syringe and needle. But it has the advantage of using several ink colors, and a bottle of ink lasts a LONG time.

Also, try your local Radio Shack. Some still carry the pens (there was a color computer plotter, used the same mech as the Atari). Worst case, B&C Computervisons probably still has stock...

2363. Question regarding Atari 8-bit cart

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-14 00:00:00 UTC
From: Timothy Krueger <kinggus@ix.netcom.com>
Message-ID: <01bc301f$7ae3cc40$364bbacd@kinggus>
Source record: 74989
Cross-posted to: comp.sys.atari.8bit,rec.games.video.classic

Hello everybody!

I picked up a strange copy of Atari Graphics today. Weird part is, in place of a the regular Atari-type label the carts usually have, it has a 3/4" x 2" co mputer printed white label with the following text:

Atari Graphics
(c) 1984 Atari Inc.
Rev# 0
Serial# 74

my question is this...what the hell is it? If it's a proto, wouldn't it say property of Atari? And if some schmoe printed this label on his home pc, would he really have included the copyright, rev#, & serial#? Or did every copy of Atari Graphics come like this? The label is obviously really old, more than likely from 1984.

Anybody have any carts like this? Did I stumble across something really cool?

Confused Gus

Actually, all but the last 3 have been available for some time. Don't
know how much he wants for them but his prices are always too high.
Give B&C a call. 408-986-9960. Video 61 always overcharges.

Actually, I have just recently found these emulators. I have been playing with both XL-It! and PC XFormer. XL-It! seems to be more compatible with the image files I found on the net, but PC XFormer is faster, just not as compatible. I also have not found a way with PC XFormer to load a second image file if there are more than one for a particular game.

I have the following items for trade or sale. I am interested in handhelds and rare &/or boxed cartridges for any systems, especially vectrex & 2600. All items are untested and will be sold as-is (most look operable &/or had works good stickers on them). Buyer will pay shipping (some of this stuff is pretty heavy too).
heres the list:

ATARI 600XL W/ POOR BOX
BOOK-ATARI BASIC
ATARI 1030 MODEM W/ OWNERS GUIDE & POWER SUPPLY
ATARI 850 INTERFACE W/ OPERATORS MANUAL
ATARI 1050 DISK DRIVE W/ POWER SUPPLY & OWNERS GUIDE
ATARI 1050 DISK DRIVEW/ REFERENCE MANUAL
ATARI 1050 DISK DRIVE
BOOK- THE ATARI USERS ENCYCLOPEDIA
ATARI 1010 PROGRAM RECORDER W/ POWER SUPPLY & OWNERS GUIDE
ATARI 410 PROGRAM RECORDER
ATARI 800 COMPUTER
BOOK- INSIDE ATARI BASIC

THE BELOW GROUPING WILL GO ONLY AS A LOT:
2 ATARI 400 COMPUTERS (ONE HAS KEYS!) BOTH HAVE BEEN OPENED AND NEED TO BE PUT BACK TOGETHER
UNIDENTIFIED ATARI POWER SUPPLY
UNIDENTIFIED TRACK BALL
OLD COMPUSERVE STARTER KIT
THE BASIC COMPUTER OWNERS GUIDE
ATARI HOME COMPUTERS PRODUCT CATALOG
800XL OWNERS GUIDE
TARGET PRACTICE DISK
SPELLDIVER DISK/ MANUAL
SQUARE PAIRS MANUAL
CARDWARE DISK
MASTER TYPE DISK/ MANUAL
BOOK - ATARI LOGO REFERENCE MANUAL
BOOK - ATARI LOGO INTODUCTION TO PROGRAMMING THROUGH TURTLE GRAPHICS.
MOSAIC 64K RAM SELECT BOX (I THINK IT IS INSTALLED IN ONE OF THE ABOVE SYSTEMS)

Gus,
Here's a funny one for you. When ICD was closing out it's 8-bit
line, I ordered an R-Time8 cart. They didn't have any assembled at the
time, so they asked me if I didn't mine if the cart cam unlabled. I had
no problem with that and sure enough, and to this day I have an R-Time8
cart with NO label straight from ICD.
I've heard of others that had carts like the one you mentioned, but
other titles. If it works, and you have docs for it, you may have a
collector's item.

```
Well, here it is: from Alpha to Beta state, the

OS/A65 6502 WWW server
(c) 1997 A. Fachat, GNU public license
http://www.tu-chemnitz.de/~fachat/csa

This is a simple WWW server for an OS/A65 computer with serial line
interface (Currently the C64 and selfbuilt computers with a 16550A UART
are supported.) It builds upon the TCP/SLIP stack of the FSTCP filesystem,
with which the OS/A65 can access files on a connected Unix (Linux) box.

It now seems to be quite stable, although extensive testing has still to
be done. But if you like to play around a little bit, have a look at it.

so long
Andre
```

> I don't think that trying to change it would make it any better....

I guess any dos could use the extra 64 entries if modified properly. I'm sure the orginal 64-fname format was kept as a result of the original hack that let Atari DOS read DD disks. Kind of became a psuedo-standard and other dos systems followed suit to make sure their DD disks could be read by Atari DOS.

If you want ahead and used the 64 entries, they would just be invisible to other, unmodifed dos systems. Thus my ranting about incompatibility. :) People use MyDOS subdirectories, and they only work w/ MyDOS or Spartados X, so I guess it might not be so big of an issue maintaining total compatibility.

I think I removed some support for SuperDOS at 2x speed because it was conflicting w/ some happy controller function. I guess I figured nobody was using superdos :)

I will see about adding a configuration option to allow you to choose which drive upgrade to emulate by default, so you can decide if you want to use SuperDOS :)

> Steve. (another point, just so we don't get mixed up, I will be
> signing "Stevo" to all my postings hereafter)

Alot of people are named Steve, I doubt anyone will be confused. If they are they can always identify me by my lack of a spelling checker and poor typing skills :)

Steve

So how is the 800XE different from the 65XE?

2374. POTGO

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-14 00:00:00 UTC
From: Markus Gietzen <magi@stud.uni-sb.de>
Message-ID: <3329B6CB.6530@stud.uni-sb.de>
Source record: 75000

Maybe someone of you can help me:

I ran into a problem with the POTGO-register:
Altough it's nowhere documented (at least not in the
books/articles that I saw) the POTGO-register changes the
behaviour of VCOUNT.

That's what I did:

```
0 POKE POTGO,0
5 ? PEEK(VCOUNT)
10 GOTO 0
```

If you don't use line 0 you'll get different values on the screen
but if you use line 0 you'll get a regular output. It seems
that a write to POTGO resets VCOUNT.

Does someone know how this exactly works ?

Thanks in advance,

Markus

PS: I've also the intension that's the reason for the problem with
Bruce Lee.

Howdy !

well ICE-T is a very good an complex terminal programm. But I'm a little bit confused.

first: my own builded sio2pc cable won't work with SIO2PC319i or APE, but it work's very well with the computer of a friend ... in this case I can't help my self - so I need some hints. What's wrong with my computer? It's really a brandnew 486 board with 16550A UART an so on!

second: this cable is next to a sio2pc device a RS232 connector. To start and run ICE-T I do need a little handler. It's name is RVerter - a handler original for and from BOBTERM. So my problem is: all the modem commands will work without any problems.

for example 'at&v' sends a little status report and so on. This text will appear without errors. But it won't come any response if I'm connected. After dialing a number the last comment of my modem: connect 9600 ... nothing. No char - nothing... (could it be my modem? It works great with my PC with 8250 UART and 16550A UART, it's an 1414VQE Rockwell-chipset Modem)

thx for any HINTS!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, MonoChrome Monitors, Monitor Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

I found the Antic article on building a speech synth and put it on the
Digital Antic Project. The article is at
http://www.northcoast.com/savetz/antic/v2n4/talkischeap.html

It looks like the code to make the project work wasn't printed until the
next issue, which I don't currently have on hand.

I hope you find it useful.

(The Digital Antic Project is a small crusade to put all of the old issues
of Antic magazine (and eventually its sister magazine, STart) on the
Internet. I have received permission from the publisher of Antic to make
the material available on the Internet for free. The site currently
features the complete text of 7 issues, as well as cover art and memorable
ads from the magazine. More material will be added as time permits.

2382. POKEYSND 2.0 Released

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-14 00:00:00 UTC
From: Ron Fries <rfries@tcmail.frco.com>
Message-ID: <3329E21C.4231@tcmail.frco.com>
Source record: 75008
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

I finally have the 2.0 release of the POKEYSND routines available for
download. The address is shown below.

The new routines now support up to 4 chips. I've also changed the sound
blaster drivers to be a bit more generic. They sound routines should
now work on most (if not all) sound cards. The sound blaster driver
routines are also available to be downloaded and can be used
separately.

For examples on what the POKEYSND 2.0 can do, check out the following:

EMU2.0 - by Neil Bradley
http://www.synthcom.com/~emu
Classic Arcade Emulator that supports:
Asteroids, Asteroids Deluxe, BattleZone, Black Widow, Gravitar
Lunar Lander, Red Baron, Space Duel, Space Invaders

XL-IT! 0.18 - by Markus Geitzen
http://myst.slcc.edu/~markus
Atari 800XL/XE 8-bit computer emulator

VSS 0.70 - by Dan Boris
http://www.geocities.com/SiliconValley/9461/emulate.htm
Atari 5200 game console emulator

All excellent work! I've greatly appreciated the support, especially
from Neil Bradley who has provided some excellent testing support.
Thanks again Neil!

A MyDos subdir is just a new directory file - 8 sectors long.

What you could do is modify it as follows: store the first 64 as per normal,
then go back and use the second half of the directory sectors. Why this
technique? If you mix up DOSes, you'll at least have access to the first
half.

Source record: 74922

Hallo !
-----lines deleted-----
> > If you don't use line 0 you'll get different values on the screen
> > but if you use line 0 you'll get a regular output.
I�ve modified the program a little bit, to make sure, that there aren�t
as low influences as possible:
0 PRINT "[CLEAR SCREEN]"
5 POKE 18,0: POKE 19,0: POKE 20,0:
10 FOR I=0 TO 1000
20 POKE 53771,0
30 ?PEEK (54283)
40 NEXT I
50 A=PEEK(20):b=PEEK(19)
60 ? (B*256+A)/50

got as result 28.06 sec for 53771, and 28.04 seconds for other memory
locations around this location and 27.34 second for loc 1536 ($0600).
The peeking of the VCOUNT-value is very time critical - so it�s very
difficult, to get exact the same conditions for different locations,
cause the interpreter have to transfer the ASCII-value to hex every
time. So these .02 seconds mean a difference of ca. 36 machine cycles
per loop, could be caused by another transfer.
then I�ve modified the program a little bit:
4 IF PEEK (54283)<>0 THEN 4
10 FOR I=0 TO 18

```
It shows, that there appear similar esults for all figures near 53771:
152, 128, 91, 37, 153, 128, 91, 38, 153, 129, 92, 38, 154, 129, 93, 39,
154, 129, 96

Then I had a look to the scematics, there is no special connection
between POKEY and ANTIC.
```

> > that a write to POTGO resets VCOUNT.
> >
So I cant belive that.
> ...If memory serves correctly <and occasionally it does> the POTGO
> command causes the 6502 to halt until VCOUNT=0...
So I couldn�t imagine that too, cause POKEY is not conneted to the
HALT-line, as ANTIC is.

```
> VCOUNT is counting the
> scan lines on screen, you wouldn't be able to set it to zero in
> mid-frame <or ever>... Will go find my copy of "Mapping" and look it up
> to be sure, but I'm almost certain this info is correct...
```

So the only strange thing I found in my literature, was this:
In "Das ATARI-Profibuch" they wrote at $D20b (POTGO) (try to bring it to English):
" If you'll put any value to this register, the registers POT 0-7 are reseted to 0.
After this (due the building of 228 scanlines at the screen) these registers are read again.
They will have a true value, when the belonging bit in ALLPOT is cleared."

So my question is, what have the POKEY to do with the scanlines ? I guess, this is the time rating for filling up it's capacitors, but where did it get it's information about when a new scanline begins.
Secondarily I've read somewhere, that's possible to read the value of the paddles faster. But I can't remeber exactly, where I have this from and how to swith Pokey to this mode.

One a little bit confused Matt

You know, I am a big 8-bit fan but I just can't let that pass. There
is no way that y/c is better than vga (rgb analog color) on any clone.
I have a y/c modified XL, I've seen y/c 800 output as well as 130XE
output on y/c monitors. I have seen many VGA displays. Y/C is surely
better than straight composite, but does not beat RGB.

There no big problem in porting the OS to other platforms.
It already runs on the C64 and a selfbuilt 6502 computer.

The programs for the OS normally run without any problems
on different platforms.

Also wanted to add that I have yet to try out the program; There may be other components which cannot be easily ported over to other 8-bit platforms, i.e., CBM filesystem versus Atari's, etc. From what I see, it certainly does show a lot of promise.

2390. 850 Interface for sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-15 00:00:00 UTC
From: kroser@pobox.com
Message-ID: <332b0a28.12696963@news.openix.com>
Source record: 74928

For sale:

1 Atari 850 interface with documentation, power supply and serial cable. This is a working unit that I last used many many years ago.

Please make an offer via email. Will sell for best offer and ship COD.

: 2" co mputer printed white label with the following text:

: Atari Graphics
: (c) 1984 Atari Inc.
: Rev# 0
: Serial# 74

I have 11 or so carts exactly like this. From what i can gather about
mine, it seems that they are prototypes/lab copies distributed by Atari
to various software companies for the development purposes.
Mine all came from someplace called LSI (lab) which is written in
permanent marker on some of them. So, while all of my carts
are not technically what i would consider 'prototypes' since they all
represent finished products, they are more collectible than the mass
produced commercial product. I hope this helps answer your question.

What Atari8 did you burn the ROM for? Could you maybe send me a file
copy of the ROM to use with some of the emulators out there? This
fast E: stuff sounds interesting.

I assume that fast E: can be used without being in the OS ROM? You
just put it in there make it more automatic?

Would appreciate you emailing me an attachment of the OS ROM you made,
and maybe explain the fast math and such too. Thanks.

Cheers,

Jon

2394. Re: Eprom burning information

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-15 00:00:00 UTC
From: Mark Wang <mwang@broadcom.com>
Message-ID: <332B1D1B.32A3@broadcom.com>
Source record: 74932

As I recall the 2532 EPROM is pin-compatible with *ONE* of the ROMs in the the Atari game cartridge; the chip select of the other ROM is inverted so that they can be wired completely in parallel and be accessed mutually-exclusively. I think the chip select geta a high-order address bit, so the two ROMs are high-low bank instead of even-odd. (Correct me if I'm wrong - it's been too long).

Anyway with no re-engineering, and assuming you can still find the 2532 EPROMS (yeah right), you can make your own 4K cartridge. If you plug it in the LEFT cartridge slot, it gets mapped to address B000-BFFF with a mirrored copy in A000-AFFF. If you can print your own PCB, you can add a 74x04 inverter to get 8K with two EPROMS. But then you'd be better off with a modified layout that supports the more popular 2764 (8K single chip). And for the ultimate in coolness, use an EEPROM! I have made one such board. Downloading is nearly instantaneous and I can change a byte at a time. Did I mention I love my Atari?

If you need details on the cartridge ID byte, init/run address etc., just let me know and I'll write it up. Also I noticed you're bidding for that Proburner. I have the same thing and it works pretty well but not very fast.

Just moved so have to sell:

Atari 520ST, mono monitor, floppy, 2 power supplies, software $50 MINT

Atari 65XE and 800 (bad p.s. on 800, but fixable) with 810 drive, joystick, and software & books$45

Commodore Amiga 1000 with 512K, keyboard, mouse, original 1.3 OS, and 20 disks $55

Tandy 1400 HD laptop, 20MB HD (compress to 40), 768K, turbo mode, back lit screen, original box and manuals whatever software on drive $85 MINT

Tandy Z-PDA (Casio Zoomer) with original box, manuals, video tape. Includes all built in accessories (i.e. AOL, Quicken, etc.), plus a host of PD software, formFactor, serial cable, transfer software for both Mac and IBM. $85 MINT

Email for ordering and offers. Thanks.

I have the following items for sale:

Atari 1200XL computer, non-working, for parts only. No p/s $5

Zenith ZVM-121 green monochrom composite monitor $15

Audiotronics amber monochrome composite monitor $12

Hayes Smartmodem 1200 with power supply. Not tested. $10

Multitech Multimodem 212e (1200 baud) with power supply. Not tested $10

IBM to Atari file transfer cable. Connects to serial port on IBM and
joystick port on the Atari. Allows you to transfer files from IBM to Atari
using a simple BASIC program (included on disk or cassette). Just run the
software on the Atari and copy the file to COM1 on the IBM. I built the
cable myself. Great for downloading files if you don't have a modem on your
Atari. $6

Prices do not include shipping. Shipping is from Dayton, Ohio. I am not
in Canada. Please reply to bx557@torfree.net or bj302@scn.org

: > it's up to the handler to set this bit with precise timing so as to remain
: > in "sync" with the modem.(or whatever)

: Where is the code? Clue: your almost right here.

Well normally the output line is sending a one voltage (the Atari SIO
port uses different voltages than a RS232 port).When bit 7 of 53775 (SKSTAT)
is set to 1,the output line is sending the zero voltage.By altering this bit
quickly and with precise timing,it is possible for a programme to do it's
own shifting (=sending/receiving a byte a bit at a time).Bit 4 can be
accessed to read the current state of the input line.

The P:R:C probably (almost certainly) uses this method.This would explain
why characters get corupted at 19200 baud.You're actually losing bits
instead of bytes.

: > : Also, please include examples of how 'disk drives do it', and why
: > : that method is so much faster than the method you documented above. Please
: > : include working code examples.
: >
: > The SIO handler just puts the byte into a POKEY register and the POKEY
: > does the "shifting" of the byte down the SIO line,a bit at a time.
: > (note:this is how the PC asynchronous comunications adapter works)

: Thanks for clarifying, this is not anywhere near what you said previously.

: > : Please also explain how the POKEY only pports the baud rate
: > : of 19200, how to 'switch to it' from your 'single bit' method, and how to
: > : use it in an R: handler.
: >
: > The point of the handler handling the SIO lines directly (instead of
: > letting POKEY do it) is to generate baud rates that are compatible with
: > modems.This was alright for the 850,since it only went up to 9600bps.
: > But with newer interfaces,the software shifting method is too slow.
: > (though the problem with the P:R:C may just be bad programming)

: Look at what you said above and what you have written here. This part
: is nonsense. Clue: All communation involves the POKEY AND SOFTWARE LOADING.

In the case of P:R:C type R: handlers,the POKEY is slaved to the
handler,rather than handling shifting itself.I thought that the following
paragraph explained that.

: > Since POKEY can obviously do 19200bps (it's what disk drives do,and the
: > SIO2PC as well),it would be better to use hardware shifting (i.e.letting
: > the POKEY chip handle the timing rather than just toggleing voltages) for
: > 19200.Further more,the APE docs claim to go at 38400 and 57600,so the
: > POKEY would seem to handle those speeds as well.

: The POKEY is a very flexable chip, you might be suprised how fast it
: can communicate if its loaded and unloaded fast enough. Again the
: toggling of voltages via software is nonsense.

Software can tell the POKEY to set the voltage (or tone#,if bit 3 of
SKSTAT is marked (set to 1)) to two levels,representing 1 and 0.
(I think the actual voltages are +4 and 0,acording to Atari's "hardware
manual".These equal TRUE and FALSE,respectivly)

: > Since the POKEY R: handler only went up to 19200,I assumed that it was
: > like the 850.

: All R: handlers are POKEY R: handlers, unless they use the joystick ports
: or some other interface. The 850 interface is limited not by the
: abilities of the Atari, but by the design of the interface itself.

Too many damn abreviations!
I meant "APE",not "POKEY".

: > I've also read something about a "CLOCK IN" line that would seem to sugest
: > that a external device can provide timing for the Atari(presumably the
: > POKEY).OF course atari had the handler provide the timing rather than
: > making their 850 more complex.
:
: An external device can provide its own clock for the pokey, or it can
: derive its own clock from the system clock. Once again, the handler does
: not ever generate any baud rates by 'switching voltage levels'. Ever.

Whether the CLOCK line reflects output through bit 7 of SKSTAT (the
"break" bit) I don't know.

: > : Thanks for your helping once again.
: >
: > Hey,where's my correction.You said you had to correct me!

: You should have corrected yourself in the original post, or in the many
: posts you previously have made on the subject.

You said that you had to correct me so I assumed...

: could answer my question.

Now now,we're all on the same side,namely the opposite one of MicroSoft!

: How do I resolve character droppage and loss of data when using an APE
: connected modem on my Atari via APE 1.11?

I dunno,I keep hearing of people talking about getting these 16-byte
buffered ACA (Asyncrhonous Comunications Adapter) cards so that they can
use high speed modems when it's obvious that even the slowest PC should be
able to keep up with the fastest modem with a normal ACA.
(ACAs work much like the Atari SIO port)
I hear about these incredible speeds being reached by disk drives.
(Konrad,the maker of the IDE interface,mentions (in SIO.TXT) a device
going at 125000 baud!)
Maybe new modems are just buggy.My US Robotics modem could just barely go
at 19200 on my PC (and God forbid if you accidently pressed a key,even a
shifting key!) and at only 4800 on my Atari.

You might make sure to turn off smooth scrolling on BobTerm.Are downloads
affected?
I know that smooth scrolling caused me to lose characters.
Tell us what your CONNECT string (and CARRIER and PROTOCOL if you're using
a Hayse modem) says.

To APE creator:Does the APE R: allow a term/user programme to designate a
buffer to use for concurrent I/O?
(the 850 does,the P:R:Connection does not)
I'll have to find my 850 manual and read more about that facinating prospect.

: > : density disk directories. Why can't we have 128 filenames on a D/D
: > : disk? (Sparta excluded, it already does?). I have noticed that any of
: > : the Atari DOS's that use double density still only use 128 bytes per
: > : sector for the DIR, even tho the sectors are 256 bytes long. This just
: > : seems an absolute waste of usable directory space. Maybe this could be
: > : used to increase the DIR space somehow?. If I were a decent programmer
: > : I'd be straight onto this, but......
: > : Glad you brought it up Yogi, very good point..

: I'm sure it was kept at 64 filenames to mantain some level of
: backward compatibility with Atari DOS. If your willing to
: introduce a host of compatibility problems, then anything is
: possible, including directories of any size.

The only thing I can think of is that the programme allocates (sort've)
enough memory for just 64 files but doesn't handle there being more than
this.Bad form at any rate.Even between different versions of AtariDOS (DOS
1,2,3,4,XE...) the directory information is different.Too bad SpartaDOS's
raw directory open-mode wasn't adopted by Atari long ago.(SpartaDOS is OLD!)
Yet another example of the crappiness of Atari DOS as compared to AtariOS.

: If you go for incompatible-but-cool, you could make disk images
: as big as you want, gigabytes, terabytes. Huge 10k sectors, a decent
: FAT system, growing subdirectories, etc.

I don't know about all that.SpartaDOS's FATs (read "sector maps") are
better than MS-DOS's any day.And SpartaDOS already suports growing
sub-directories (with SpartaDOS disk images).

: Maintaining compatibility while providing additional functionality is
: not easy, and I think reclaiming those extra 64 directory entries would
: be more trouble than its worth.

If you need 100% AtariDOS compatibility,you can just put your data files
in a AtariDOS disk image.You'll obviously have to maintain this practice
anyway to use programmes that NOTE and POINT.

As for the programmes that don't like big directories,just don't do a
directory.I know that A-tar-zee modem locks up when I do a directory,so I
just don't.With games with no data files (or at least with data files that
only get read once like fonts) there shouldn't be a problem.If a game with
bunches of files like F-15 doesn't work,just use a disk image.
(I'm assuming that some multi-file games use AtariDOS's absolute POINTs,so
neither a networked MS-DOS nor PC Mirror would work anyway)

In summary:if you're looking for compatibility,use disk images.For
performance,use the PC's own DOS via a Networked DOS (a NDOS?).

: -: >Anyone game?
: -: >
: -
: -You'd have to update APE as well.Why not just update APE to allow PC
: -mirror to provide a SpartaDOS image?

: Why? APE already supports disks up to 16 MB. (# sectors=$FFFF) which
: is the max the ATari can support (NO, I dont want to write a new OS!
: for the 8 bit OR the disk drives)

I was talking about accessing MS-DOS files directly rather than having to
put them in a disk image.

: -: Break the 64 filename barrier? Now that's food
for
thought... : -: Can you imagine how long it would take to scroll through a
: directory
: -: that has over 5000 files? (Thats approx the amount I have in a
: MyDOS
: -: image). Hmm, it certainly would be nice to have more than 64 files
: per
: -: DIR tho...life would be much simpler.. :)

: Well, so does my PC, and the tree there works fine. I am looking at it
: in terms of, why should I have to flip through 20 mega image disks to
: get at one game? I want to have as many as possible in each image, and
: 64 just doesnt cut it. It should be possible to modify atari dos even
: to work over 64 (the limititation of 64 is caused by 8 entries in each
: directory sector*8 sectors=64 max. Does mydos only permit 64 ROOT
: entries? Actually, for that matter, doesnt MS Dos only support 256
: root files?)

Well there really no limit since you have sub-directories whether you're
using PC Mirror or disk images.I would just like to get the power of
MS-DOS and have more free RAM without using OS shadow RAM.

The size of the root directory is fixat at format time.It's usually 512
with hard disks.Sub-directories can grow to any size.But they never shrink.
Since you can't open them like files,you can't truncate them with some
utility programme either.

: -: One thing comes to mind. The difference between single and double
: -: density disk directories. Why can't we have 128 filenames on a D/D
: -: disk?

: 8*8, see above..... but should be DD? Strange.....

Atari DOS 1 & 2 (created by OSS) was created to be very simple.

: -It would be nice if that space was used for something.

: How about longer filenames?

: -(it basicly means that reading the directory of a double density disk
: is
: - slow than one of a single density disk)
: ---
: Can you imagine what a nightmare drive that would be that would have
: to format the whole disk in DD, write the first 3 sectors in SD, then
: write only the directory sectors in SD (1/2 the track) then switch
: back to DD? Ugh

Well my point is that a SD directory is made up of 8 128 byte sectors and
a DD directory is made up of 8 256 byte sectors.But they both hold just as
much so obviously the DD directory (with only the first half of each used)
is slower to read than the smaller SD one.

: Yogi <noone@nowhere.com> wrote:
: >-It would be nice if that space was used for something.
: >
: >How about longer filenames?

: ANALOG once published an article/program on getting 128 directory
: entries on a DD disk -- probably in DOS XL.
: And there was another program that used the extra space at the end of
: an enhanced density disk to store file descriptions; I used that one
: for a while before I switched to Sparta.

The DOS 2.0 single density disks had a wasted sector at the end of the disk.
This was because disk drives have sectors 1-720 but AtariDOS had 0-719.
Why the limit wasn't simply increased to 720 is yet another bizarre Atari bug.
And on a DOS 2.5 enhanced density disk,there's even more wasted space
since DOS intra-sector links are limited to 0-1023 and there are 1040
sectors on a ED disk.One of these 1023+ sectors was used for the secondary
VTOC.Why two VTOCs? Because the first VTOC was made to look identical to a
SD disk's.This is why MyDOS thinks that a Atari ED disk only has 719 sectors.
Even the sector count in the VTOC says 719.

MyDOS uses one format for all disks with 720+ sectors.So MyDOS ED disks
have one VTOC with the correct sector count.And MyDOS 720 sector disks
formatted by MyDOS (or run over with VTOCfix) will have a extra sector free.

In summary,don't use VTOCfix on a DOS 2.5 ED disk!!!
(it may work if you tell VTOCfix that it's a 719 sector disk,but why not
just use DISKFIX?)

: >
: A MyDos subdir is just a new directory file - 8 sectors long.

: What you could do is modify it as follows: store the first 64 as per normal,
: then go back and use the second half of the directory sectors. Why this
: technique? If you mix up DOSes, you'll at least have access to the first
: half.

Only MyDOS and SpartaDOS X (not disk!) can access MyDOS sub-directories.

```
The Swedish Atari Club (SAK) 970104
and NoCrew proudly present...

-------------------------------------------
T H E N O R D I C A T A R I S H O W '97
-------------------------------------------

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we are arrange the show for the
third straight year we hope to fulfill everyone's expectations and that
this will result in the best possible atmosphere. We've gotten a certain
amount of criticism, both positive and negative, from those who have
attended the shows in '95 and '96. We've taken heed of the suggestions
made and we're once again off and running!

- WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday,
June 15. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 1 p.m. on the Friday and close at 6 p.m. on
the Sunday.

The show will take place in Gothenburg, just has it has in previous
years. The exact venue has not yet been established. We're still looking
for the cheapest location. The likeliest possibility is Kortedala
gymnasium, where it was held last year or some other venue, nearby.

- WHAT ACTIVITIES WILL BE HELD?

* There will be an Exhibition Hall will dealers, distributors, ShareWare
programmers and a host of other interesting personalities. The usual
meeting place for all those not wanting to "hack". This is also where
the Swedish Atari Club will be found supplying information, sale of
PD-disks, the club magazine's TT, the BBS, etc. We'll also have an area
reserved for a swap meet where you can buy, swap or sell single copies
of Atari related material and a "soldering corner" for those of you
wishing simple repairs done.

* A "Hacker Hall" where demo and other programmers can gather for
competitions and swap demos and all kinds of code. NoCrew is the
Swedish demo group who will see to it that everybody takes part and
enjoys themselves. Those of you hungry after rewards in the form of
```

prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

* Seminars with a number of well-informed lecturers. Last years seminars were very much appreciated, something of which we naturally have taken notice. The seminars will cover a variety of subjects (i.e. MIDI ercording/editing, DTP, hardware, programming) where the above mentioned "well-informed lecturers" will demonstrate his subject directly on a computer in order to provide the audience with practical examples. We'll also hold the seminars on different days and at varying times so that you won't have to miss the chance if you don't attend on a particular day.

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated contest last year), hard disk throwing (this year we WILL succeed!), network games, juggling, etc. Everything depends on our finding volunteers to act as game leaders and judges. There will be prizes for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips, etc. We may be able to arrange quantity discounts at the local pizzeria as well as other bonuses.

- WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 100:- (about UKP 8.50)
* Single Entry ..... SEK 50:-

These prices include full access to all the activities being held during NAS97.

- WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

- HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (E-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an E-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your E-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet..se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is:
+46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everyting there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile 'phone on
+46 70-669 52 35.

WE'RE LOOKING FORWARD TO SEEING YOU AT THE NORDIC ATARI SHOW 1997!

Hate to rain on your parade, but you're nuts. I don't see any way you could offer such a system for that low a price. Just for the motherboard itself, you may have to pay something on the order of $100 per board, because low-volume custom PCBs are expensive. Also, component availability is a real problem, because you'll need real CTIA/GTIA, ANTIC, and POKEY chips (at the least, those are just the custom chips that come to mind).

Who's gonna design the thing?

2413. Wild & Wacky Auction (Final 24 Hours)

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-15 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970315061600.BAA24143@ladder01.news.aol.com>
Source record: 75013

24 Hours Remaining before the Auction goes into the Going Once, Going Twice, SOLD.

This is your last chance to get ahold of some truly unique collectables!!!!!

Wild & Wacky Atari Auction (Final 24 Hours)

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing your package and adding $1 for materials - Priority stuff <2 lbs will be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will be accepted. I would NOT reccomend sending cash, but some people seem to
anyway. Checks will be held for approximately 1 week to clear. MO orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March 15th.
One final post will be made to newgroups. A bidder who is not on the update list may bid on a G1 item, but not a G2 item. Any raise to an item in the G1 or G2 phase will result in the item staying or returning to G1.

2414. A New Atari 8bit with slots and detachable keyboard!!!

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-15 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970315062501.BAA24545@ladder01.news.aol.com>
Source record: 75014

I need some feedback from all parties:

Would you be interested in an all new Atari 8-bit with the following specs:

New motherboard with 5 8 bit PBI slots, SIMM sockets, detachable IBM Style 101 keyboard with
built in macros for using the F1-F12 keys, onboard IDE interface, internal SIO disk drive controller.
All packaged into a box with either Atari XL styling or Atari XE Styling, I need your decision on that. The first PBI card will be a Parallel & high speed Serial card. The case will have an opening for a 5.25" floppy drive or a 3.5" floppy drive using a PC 3.5" disk drive universal adapter kit. The power supply will be an PC style 250W internal power supply. The target price with no disk or hard disk would be around $120. With a disk drive: $145. With a disk drive & 40 MB IDE har drive $200.

Would anyone be interested in an all in one Atari system with professional styling with fully integrated components using industry standard parts and upgrades?

Please give your feedback as I am looking into this project quite seriously, but need to know if anyone would be willing to purchasing a unit. A production run probably wouldn't be anymore then 100 units.

Curt

Message-ID: <332A814E.1DBB@bellsouth.net>
Source record: 75015

> That's what I did:
>
> 0 POKE POTGO,0
> 5 ? PEEK(VCOUNT)
> 10 GOTO 0
>
> If you don't use line 0 you'll get different values on the screen
> but if you use line 0 you'll get a regular output. It seems
> that a write to POTGO resets VCOUNT.
>

...If memory serves correctly <and occasionally it does> the POTGO
command causes the 6502 to halt until VCOUNT=0... VCOUNT is counting the
scan lines on screen, you wouldn't be able to set it to zero in
mid-frame <or ever>... Will go find my copy of "Mapping" and look it up
to be sure, but I'm almost certain this info is correct...

hope it helps!

2416. Re: A New Atari 8bit with slots and detachable keyboard!!!

Source record: 75018

```
Dennis McGuire wrote:
>
> So how is the 800XE different from the 65XE?
>
It has an ECI as the 130 XE. IT _has_ really the same board as an 130 XE
(at least my one has), only the secondary MMU-chip (a chip similar to a
PAL 16) and the secondary RAM-Bank is not included.
```

Some weeks ago, someone was looking forward to find out the terms of this chip to burn it in GALs. I'm very interested in getting to know these terms.

```
Thanx in advance.
Matt

: an HTML front end?
: Wayland.

A widget is an item on a graphical user interface. The 6502 or better
the TCP/IP implementation doesn't provide something like this.

OTOH, the WWW server outputs a HTML error page, when an error occured.
And the browser makes that a `widget'.

I have _not_ written a HTML browser for the C64, but a WWW _server_!
```

so long

: > also have these critical components.
: >
: Also wanted to add that I have yet to try out the program; There may be
: other components which cannot be easily ported over to other 8-bit
: platforms, i.e., CBM filesystem versus Atari's, etc. From what I see, it
: certainly does show a lot of promise.

Serial line interfaces are available for ACIA6551 and UART16550A and
for the 9600 baud C64 interface from Daniel Dallmann.
If there is some "make-it-easy" chip, writing a device shouldn't be
a problem.

Filesystem interfaces are available for the CBM serial and parallel
IEC busses, as well as for a WD1770/1772 where the OS can read/write
PC style disks.

hope it helps

---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

Andre,

I thought a 1Mhz 6502 would be too slow to allow for a TCP/IP stack. Did
you actually implement a TCP/IP stack on the 6502? Could you post some
details about the actual implementation?

Hi. I need power supplies for a 1050 Floppy and 1010 Tape Drive.
I would prefer to buy from someone in Canada since these are fairly heavy.
Please email me directly instead of posting to this newsgroup.
Thanks.
David

I also have 3 8-bit carts for sale/trade.

I'd like a Happy 1050 in good working order. With v. 7 software..
Anyone have one they'd like to part with? No Happy 810s please..

I'd also be interested in a couple of US Doubler'd drives and maybe
one duplicator drive w/software..

Other items I'd like to obtain:

Basic XE w/manual
MIO (1mg prefered, I'll consider a 256k if no one meggers show up).

I've checked with Toad a couple of times and they never have them in
stock..

Any responses will be considered.. Please include how much you are
willing to sell the item for. Thanks!

Message-ID: <858568152.24273.1@kwll.demon.co.uk>
Source record: 74961

Hi folks....

Monkfish's Pond is proud to re-annouce the all-new, all singing
AREA 51: Atari 8bit page....

Come and get links to Rainbow, XL-it, PC Xformer, and APE....
Download the latest version of xfSIO (*The* shell for the DOS emus!)
See the top ten fave games of various people (eg, M. Gietzen!) and
link to the relevant titles at Jellystone Park.....
and listen to some ~very~ nice MIDI music.

E-Mail me your top 10 fave games, and I'll link to the most liked ones
as well in due time...

ATTN YOGI: I'd be honoured if you'd mail me your top 10.....

Also at Monkfish's Pond: The Red Alert Page, with our own home made
multiplayer/skirmish map files.

Warning: Although the page works with Netscape, it looks (and sounds)
best with Microsoft's Internet Explorer 3.0+ in 800x600 16bit or
greater.

Above all.... Have fun and keep on using those 8bits!

PS: The homepages server at demon is taking quite a whacking at the moment, so
it may be slow... then again, it may be T1. Who can tell!?!

Frankly, I just don't see how Curt could do it for that kind of price.
I mean, just a case and power supply would I think cost him around
$75. Then a 101 key keyboard is another $20. We'rre up to $100
already and we haven't even started talking about a motherboard
(definately a custom construct sounds like) drives or the like.

The guy has to get something for his effort too. I just don't see it
at those costs.

I dunno.

>Please help,
>twonoahs@aol.com

Atari reads a paddle trigger when a joystick is pushed left or right. Make sure the stick is centered properly, or try this:

toggle into keypad joystick mode to select the joystick, then flip back to the "real" joystick.

I *HOPE* he can make it for the price he mentions... but having been
'burned'
in the past on send-me-money-now-for-something-later deals I tend to do
things
on the side of caution. No offence meant to Curt tho, he has all my best
wishes
and money if he can make a working product!

>---F. Nietzsche

Markus,
If this is, in fact, your program, where are the definitions of
POTGO and VCOUNT? You need a line like this:0 POTGO=53771:VCOUNT=54283.
If you don't have this, the peeks will look at location 0. Try this.
10 POTGO=53771:VCOUNT=54283
20 POKE POTGO,0

```
30 ? PEEK (VCOUNT)
40 G.10
```
This should always show VCOUNT to be at or near the same number (+/- 1 ot 2 counts). That is, if by poking POTGO with 0 does reset the counter. If not then VCOUNT will display a number between 0 an 130 (NTSC) or 0 and 155 (PAL), depending on the scan line it is working on at the moment.

Andre,

A widgit is just an old fashoned english/american term for a small
mechanical device, if it is used on the Amega then it's a scroll bar or
some thing.

My point is that since your work operates on a 6502 then this is required
to make it go. What else is required, operating system, disk drives? I
understand that it's a server, the viewer is the PC.

Wayland.

Funily enough that was the only world I couldn't solve either, but in the end I found another user with the game stuck on another world and we "swapped solutions". OK, what you do is shoot down a block, and take it to the boat-looking-thingy screen, let the boat-looking-thingy pick up the block, let the boat-looking-thingy go all the way round and come back to you, this should give you a long straight thing. Now back track, go to the screen with the chasm and the 2 flashy doors, one on each side of the chasm (the screen you arrive at when going through the flashy door at the landing site). Drop the long straight thing at the top of the hill, and push upwards on your joystick whilst standing over it... that should give you enough to solve that world, without spoiling it ALL for you, (I bet you can guess what the circles are for now ;)

Incidentaly a friend of mine could make a short bar appear on this world above your spacecraft when you tried to take off without the Ruby Chain, and it would follow your horizontal movements whilst staying at the same vertical position, hence preventing you from leaving, but I was never able to recreate this.
Does anyone know how to do this?
Is it a "hidden feature" or a bug? (or both ;)

Raphael Espino - rje@co.umist.ac.uk

: >

: Do SLO and SRE change carry when they shift right?

You could take a look at my document on this subject. You won't find any
more exhaustive description of these opcodes anywhere else I'd say. I
wouldn't trust the accuracy of other sources too much.

It is at:

http://www.funet.fi/pub/cbm/documents/chipdata/6502-NMOS.extra.opcodes

And also FTPable at 'ftp.funet.fi'

: I assume:

: clc

This opcode does an ASL, so the state of the carry before SLO will not
affect anything. (Might be easier to remember this as another common
mneumonic for this opcode is ASO. Opcode bit-pattern 000xxx11.)

: slo one ; for the one without the '5 flag.
: bcs alwaydoesthis
: neverdoesthis:
: one .da #1

: right?

Yes, me ;-)
Beside a few priority-problems it works quite well.

> joystick. The joysticks configs in XL-it, sees it before the games screen

Someone else had a similar problem. He solved it by disabling
the Atari800 mode (e.g. using XL-it! as Atari XL/XE).
Anyway I never ran across that problem.

Bye,
Markus

I've had the same problem with both 0.17 and 0.18, though the very first time I tried 0.18 (before calibrating the joystick), it worked perfectly. I've been thinking about changing the values in joy.cfg to see if I can find better values. Perhaps you could post the effective values XL-it uses before a calibration is performed?

From: Anthony Smith <Anthony.smith@worldnet.att.net>
Message-ID: <332D9C6E.673@worldnet.att.net>
Source record: 74886

Hello,

I've just found an Atari 8-bit emulator for my PC, this made me happy because I used to own a 130XE way back, but I seem to be having difficulty finding software. I found a couple of places and mirrors that all have the same thing, but they dont have any of the stuff I remember like Bruce Lee, Karateka, Starfighter, or anything like it, does anybody know where I can download stuff like this.

Thanks

2454. ANNOUNCE: Digital Antic Project has 2 more issues

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-17 00:00:00 UTC
From: savetz@northcoast.com
Message-ID: <savetz-ya02408000R1703971206530001@news.northcoast.com>
Source record: 74887
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.classic,alt.atari.2600

I have added two more issues of Antic Magazine to the Digital Antic Project. Highlights of the new stuff include four downloadable games, a look at the Atari 1200XL, articles about the Atari VCS and 5200, and reviews of all sorts of "new" programs like AtariWriter. :)

The Digital Antic Project is a small crusade to put all of the old issues of Antic magazine (and eventually its sister magazine, STart) on the Internet. I have received permission from the publisher of Antic to make the material available on the Internet for free.

The site currently features the complete text of eight issues, as well as cover art and memorable ads from the magazine. More material will be added as time permits -- faster if YOU volunteer to help by scanning, HTMLizing, or proofreading.

Check them out at http://www.northcoast.com/savetz/antic/dap.html

Here's what's new...

February 1983 - Vol. 1 No. 6 - Tools
Valentine - Short but Sweet
Ten Best From APX
Pronto - Bank on Your Atari
Ultra Sound - Let your computer drive your stereo
Tool Box - A professional's favolites
Tiny Text - A type-in word processor
CBOOTMGR - Cassette Utility
Display Lists Simplified - Mix modes on the screen
Inside Atari - a look at the Atari 1200XL
Starting Line - UT, UT and Away
Assembly Language - Extended Directory
Dragosmoke - Words Worth, Part II
Pilot Your Atari - Sounder
In the Public Domain - Stellar Defense [downloadable]
Education - Grading on the Curve
Tape Topics - PACTL Poker
I/O Board
Product Reviews: Basic Commander, Wayout, Tricky Tutorials, Diskey, Basic Routimes, Jeepers Creepers, Miner 2049er, Home Filing Manager, Baja Buggies, Tax Dodge, Menumakr
New Products: Miles Payroll System, Stratos, Inside Atari Basic, Picnic Paranoia, Magic Mail, Sea Dragon, E.T.Phone Home, Space Shuttle, Mac-65, Ramrod, Atari 400 48k Upgrade, Wordfun!, Swamp Chomp, Taxman-83, Printmate 150, Galaxians, Atari Music 1, Speedway Blast, Captain Cosmo, Starfighter & Slik Stik

Looking at Books - Atari's Native Tongue

May 1983 - Vol. 2 No. 2 - Communications
Info For Sale - Commercial Databases
Talking to Big Brother - communicating with IBM mainframes

This stuff is all (C)opyright Software, and not free to get anywhere! There
are some internet/ftp-sites where you can get these software, look in the
www.yahoo.com for a few atari 8bit sites, and watch out for some FTP-links.

Have fun

2458. Wild & Wacky Auction (Going Twice!!!!)

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-17 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970317041900.XAA27470@ladder01.news.aol.com>
Source record: 74965

AUCTION NOW IN GOING ONCE, GOING TWICE, GONE STAGE
Place your bids before you miss out on these spectacular rarities!!!!

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

Has anyone tried the XL-it with MULE?

I think XL-it rules and I love the interface and it is the only emulator that I can get to run MULE perfectly, but MULE keeps saying you need a joystick. The joysticks configs in XL-it, sees it before the games screen pops up, but then MULE says: Paddle at the bottom is blinking. Anyone have a fix for this? I'd hate to bother the guy that wrote XL-it with a dumb question like this, but I love M.U.L.E. a lot and...

Please help,
twonoahs@aol.com

Hi, you probably should attach your bbsdemo2.com file instead of posting
it directly to the msg base. I don't think the North American users can
save that file. (If anybody could save the BBSDEMO2.COM file let me know
how THANKS!)

Source record: 74824

Hi Robert,

Well video will be standard composite based on the super video mod. However I've been speaking with a friends friend who is a heavy duty analog engineer and has done a lot of video work and I'm send him copies of an old RGBI mod for the Atari 800 to see if he can clean it up and adapt it to use the Atari SC1224 monitors since they are so abundant and cheap.

Remember, right now this is all on paper right now with nightly conversations about ideas and changes. All we're really doing is taking already designed projects and integrating them into an all-in-one package with a more professional and clean look to it. We're hoping to do some playing around with some PBI card designs.

Again, I'm probably only going to do about 100 of these units and from where we stand right now, the internal SIO disk drive controller has already been dropped for the time being due to cost overrun projections. We're trying to stick to the $120 price, but it may go up to $140-$150 for the base unit. We'll have to see.

Why would you be asking that in an Atari8 newsgroup? Chances are we
don't have the answer and don't care to browse the answer. Those that
do, could follow an Apple newsgroup. Why not try to find a newsgroup
dedicated to the Apple II or its emulation? It would probably be more
helpful to you.

Well, the only thing needed is a 6502 computer. And a version of my OS/A65
for this computer. Currently it runs on small selfbuilt 6502 computers
and on the C64.
And it is a real TCP/SLIP stack, so a SLIP line is needed. I have a
linux box where I have configured a serial line to 9600 baud, 8N1,
slattach'd a SLIP interface and routed the packets for the IP address of
my C64 to this interface.

More information on my homepage
http://www.tu-chemnitz.de/~fachat/csa

I'm on a conference at this time and don't have much time
for more info, sorry.

Andre

Thanks for the input Alex. However I spoke with someone who does plastic moldings and the moldings are horrendously expensive, so perhaps going all black may be the choice, however black keyboards are too expensive. Right now its the motherboard that matters the most, a basic case design will be used, the SIO port will be a standard 15 pin plug and I'll include a custom standard 15 pin to Atari SIO cable with each unit, I may only include 1 joystick port, but I'll shoot for both, video is another issue, either I'm comming out of the unit with RCA jacks or an IBM PS/2 type connect to RCA plugs (but expenses have to be brought back into play)

Hi Dan,

Well I've got the engineers who are willing to pull together and make this work, in the next couple of weeks the specs will be finalized, hopefully this will come together by years end with all luck (The internal SIO disk drive controller will be a seperate item at this point to keep costs around $120 for a base unit)

Hi Will,

Actually the case with p/s will run me $22, Mitsumi keyboards are about $12-$14. Now those are individual prices, a quantity of 100 each will bring them down even farther. I am however pulling the internal SIO disk drive controller, that would have added $40-$50 to the cost and I need to concentrate of the motherboard itself.

Well oke.... I'm the Sysop of "Beco Tel bbs" in Amsterdam, The Netherlands and
I run a BBS with BBS Express PRO 5.0b.
The BBS is online every day from 7 - to 06 GMT on 300 - 14k4 baud.
Phone number is : +31-20-6326859

And I have also a web page that wil support the BBS and ofcouse the
ATARI XL/XE.... You can also download a list of ALL file that are on
BECO TEL bbs so you can look if ther is something for you.... And if there is
I can put it only my Homepage So you don't have to call longdistance to get
the files you like...

SOON I will update the homepage to a NEW look and add more support...

My BBS and a other 2 BBSses here in the netherlands are also networking with
the USA and CANADA and GERMANY..

>I believe mine is the remaining last Atari 8-Bit BBS in the Southwestern
>USA.

>Atari 6502 BBS (210) 737-3759

Well is that BBS also in that NETWORK ??? If not, maybe you can look for a
other BBS to join the network...

Gtx. Bernard Kok (Sysop of BECO TEL bbs)

My first thought at the program was, why wasn't it written in machine
language? You can get more accurate results that way. Anyway, to check
that last theory, what you might try is to write something to COLPF2 on
every scan line. This would show whether the CPU was actually halted.

So what kind of floppy drives *will* work? Are you planning some kind of PBI setup like on a 1450XLD?

How about integrating something like the ATR-8000 drive controller circuitry, and just putting a PC-standard floppy connector on the motherboard? That way people could just slap in a couple of ordinary PC floppy drives, keep the cost down...

I've been programming this demo for the Atari 2600. It's going rather slowly and I doubt I have the patience to go all the way through with it.

However, I do believe I have the power in me to port Combat to the Atari 800, and from there to the Atari 5200 (with help). I could also probably do the same with Yars Revenge, perhaps even putting it on the same cart.

Problem is, anyone who has a 2600 obviously has Yars and Combat, or can find them easily, so it would be a silly project to go through all that effort.

Actually, any competent 6502 programmer with ambition and a disassembler could convert a sufficiently simple 2600 game to the 8-bit. Just replace the display loop with something that copies the necessary data into memory and ANTIC registers instead of drawing it real-time, then translates the registers to and from TIA-equivalent locations in zero page and RIOT data in page 2, just in case the game reads from those locations in its calculations. For example, it would read the values written into the sound chips and look up the equivalent POKEY distortions and frequencies in a table, and copy the joystick locations, START and SELECT buttons into the RIOT registers... perhaps even the black-and-white or difficulty switches. It would also wait for the next vertical blank to preserve the timing aspect. In games like Combat and Yars Revenge, sprite multiplication isn't much of a problem; Yars does not use the repeat registers and Combat places a maximum of four players and missiles on the screen at any given time.

I'll tell you one thing. Rewriting the display loops will be child's play compared to writing that demo, considering not only do I need to write a rather complex display loop, but I also have to find out the exact way to make sounds just like Pac-Man and Space Invaders. And Defender, too..

I (and others I'm sure) would be willing to pay quite a bit more for the machine if VGA output were built in. Don't laugh, I'm serious. Good separate chroma/luma monitors are getting hard to find. There are a number of electronics houses that sell scan converters on a chip, which turn VGA output into composite so you can use a PC on a TV. At least one does the reverse, it is the chip used in most PC TV-tuner cards. I found the company by doing a web search for "scan converter", I think... I can find a URL if there's any interest.

Arguing about styling is fun, but what would really make me want to buy the machine would be VGA video... Otherwise it just doesn't seem like _that_ much of an improvement over the 256K Supervideo 1200XL and two XF551's I'm using right now.

>know how much he wants for them but his prices are always too high.
>Give B&C a call. 408-986-9960. Video 61 always overcharges.

Video 61 claims their carts are actual prototypes that they receive from Atari. B&C are burning their own EPROMs using original Atari roms and boards. This adds another grey area to collecting cartridges. When is a prototype no longer a prototype. If B&C can make these rare games on demand, are they now bootlegs? protos? something else???

In my opionion, what B&C is doing kind of sucks. How do you tell the difference between a real proto and a recent EPROM burn (other than the labels I think B&C said they were printing)?

B&C is also burning carts for Lynx and 2600 games that were never released. 2 of the Lynx games they are burning carts of are "Raiden" and "Fat Bobby" which are going to be "true" releases from Telegames soon. Are the B&C version sanctioned or illegal?

Should we as collectors be happy that we can now obtain these rarities, or pissed because our rating systems are becoming useless, and true protos are now less valuable?

Comments?

>Yes, me ;-)

I tried MULE with XL-it for the first time today. Despite a few minor glitches,
it's almost perfect, and I'm impressed! Even the sound is almost perfect (it
does tend to go faster and slower sometimes). Does anyone know if music
is allways played at the correct speed on a system faster than a 100MHz
Pentuim?

>Beside a few priority-problems it works quite well.

Unfortunately, the priority problems make it impossible to see the Mountain
Wumpus appear in a mountain as a dot because the mountain covers the dot :-(
The PM and playfield priorities seem to be wrong a lot of the time in MULE.
Will these be fixed in the next release of XL-it?
I also noticed that during the auctions, at the stage where it tells you
who has a surplus and who has a shortage, the wrong colour is sometimes
given to the figure showing how many units each player has. This causes the
wrong text to blink sometimes.

AE.

Why not just buy a generic power supply that is capable of the specs you need? I don't remember the specs nor do I want to dig through my boxes right now look it up, but I THINK the type of power the 1050 needs input to it is 9VAC but don't hold me to that. Perhaps the specs are available at one of those sites people have mentioned where there are all kinds of Atari8 references.

Cheers,

Jon

: -
: - Hi all,
: -
: - Anybody know when jellystone will be back online at
: -ftp.hackerz.com? I can't get thru for one!
: -
: Whenever the sysadmin can restart the FTP server. I think he may have
: been unprepared for the flood of people using the site.

: -Also, has anybody noticed that a lot of the files have extra bytes at
: -the end (probably caused by transfer by xmodem or something)? This

X-modem will cause this problem.Y-modem and Z-modem should fix it.
(at least Bobterm's Y-modem does)
The problem is happening with Jellystone because the files aren't ARCed.
All the files in a ARC are protected from X-modem's extra bytes.
(though your ARC programme may complain about those extra bytes,you're
sure to be able to extract everything)
Kermit also fixes this problem.Though the only Kermit I know of for the
Atari is Kermit-65,which is SLOW.

: On the atari all the files have this problem, the byte count is
: supposed to take care of it (when there are less than $7D bytes in the
: sector) but I know that this is not always the case. Error 136's
: abound!

If you're talking about the "slack" at the end of a file,all DOSes have
this problem.Usually the directory byte-count or last-sector byte count takes
care of this.
The DOS that Apples use and the one built-in to CP/M have no byte count.
That's why X-modem only sends multiples of 128 bytes,Xmodem was made for CP/M,
which records a file's size in 128-byte "records",instead of bytes.
(Apple DOS uses 256 byte sectors)

: -It would, I think, be a good idea if there were a list of all known
: -game files, along with a checksum of their contents. It would be a
: -good starting point if yellystone had such a file in each directory.

It would be easy since UNIX has the "sum" command,which shows a checksum
for a file.GNU has a sum for MS-DOS as well.And UNIX has powerful script
languages to use.But MS-DOS's COMMAND is even good enough for this purpose.

: Possibly, but the files are fluid.... Many people have different
: versions of the same file, especially if they were like me who either
: (A) re filed the stuff or (B) are obsessive about saving disk sectors
: (albeit at expense of loading time) by running binaries through a
: program called "Bloc" which removes excess 00 00 00 00 ....etc. to
: save disk space.
: Checksum will be different. Also, PLEASE, no one erase your old disks
: unless YOU'RE sure the archived image works fine. I cannot test 100%
: 1000's of pieces of software.

Sh's and COMMAND's "FOR" command should make automation of checksumming easy.
You can get sum (and cksum,which is even better) from a GNU archive near you.

: -YOGI, if you're reading this, and think this is a good idea, please
: -contact me as I have written some nice programs which could be useful
: -for this.
: -
: I would like to see the programs at any rate. Do they run on the PC or
: on the Atari?

2512. wanted: info about power cord -130 xe.

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-18 00:00:00 UTC
From: gwittman@ix.netcom.com
Message-ID: <332e8d0c.265608@nntp.ix.netcom.com>
Source record: 74912

The other day i found a 130 xe at a thrift store for $5.00.
It did not have a power cord with it. I also found a 65 xe at a
thrift store too, it had a power cord. I was just wondering if they
both use the same cord. The 65 xe works fine but the 130 xe does not
work at all, the red light does come on but all I get is a black
screen. I did not know if the specs on the power cords where
different are the 130 xe had internal problems.

> capable? Thanks.
>

That's hard to say... because some XL's have extra things like build in
diskdrive, and some other 8bits have some other interesting extra stuff
inside.

The 1450XLD has that great drive inside, but the 130XE has the fantastic
128kb inside... you see the problem?

I like the stock 800XL most... because of the very strong and very good
usable keyboard of it... others prefer the XE computer or the
XE-(game)System for the seperate keyboard and the build-in game.

BTW the 400 seems nice to me either <GRIN>, but yes that comp is, if it's
stock, the least capable one.

> Jon

I believe the DCM format is not "compressed" in the sense that a .ZIP or .ARJ file is, rather it is "clear text" format, but with zero <empty> sectors represented by a flag of some kind instead or 128 or 256 zero bytes.. so a DOS 2 disk that is half full will make a 45K .DCM file rather than the full 90K... but if Bob Puff is still around I would definitely ask him, and not listen to me at all.... <Does anybody have Bob's E=mail address??>

> the least capable 8-bit Atari computer, right? Which one is the most
> capable? Thanks.

the most "capable" 8-bit Atari computer would
probably be the 130XE.. It came with 128K of RAM, otherwise it was about
the same as an 800XL... here is a short list..

Atari 400

This was the first Atari, it came with 8K or 16K RAM, no built-in
BASIC, no direct video outputs, no expansion bus, no right cartridge
slot.. Its keyboard was a "membrane" type , which made it difficult to use with anything
like a normal typing speed. This machine generally did not work with a
disk drive, due to the fact that the Atari DOS took up almost all of the
available 16K memory, leaving about 3K left for programs.

Atari 800

This was the "big brother" of the 400. It came with 32K or 48K of RAM,
direct video outputs , a right cartridge slot , but no built-in BASIC
language. It did feature a real keyboard.

Atari 600XL

This was released in, umm, '82 or '83, along with the 800XL.. The 600XL
had a full-stroke keyboard, 16K of RAM, built-in BASIC, an expansion
bus, but no direct-video outs It also featured a revised Operating System ROM, which made
some
software malfunction or fail to run.

Atari 800XL

This was the "top-of-the-line" Atari computer, designed to replace the
800 and 1200XL. It had a full 64K of RAM , full-stroke keyboard, expansion bus,
direct-video outs, built-in BASIC, the new XL OS ROMs...

Both the 600XL and 800XL lacked the right
cartridge slot, which was rarely used

Atari 1200XL

This machine actually came out before the 600XL and 800XL, but for some
reason never caught on. It was much like the later 800XL, but had its

own version of the OS ROMs and lacked the expansion bus. If you can find one in working order, let me know!

Atari 65XE

This machine was basically a re-issue of the 800XL, with a redesigned case, without the expansion bus.

Atari 130XE

This was the "most capable" of the Atari machines. Basically it was an 800XL with an extra 64K of RAM, accessible thru bank-switching and generally only used as a RAMdisk.

Basically, all these machines were compatible with one another. The 400/800 had four joystick ports, so some games would not work in 4-player mode on the newer machines , as well as some peripherals which used the ports 3 and 4 . The built-in BASIC on the 600XL and 800XL was "Revision B" BASIC, which contained a bug that caused it to lock up frequently, making it almost unusable, so you generally needed a BASIC cart for these machines as well. This problem was corrected in the XE series. There were a few other models of Atari 8-bit computer made, but as far as I know none of them ever got past the prototype stage...

Basically what I'm saying is that as long as you had 48K or 64K of RAM, these machines were all very similar. The 800XL and XE series could load the "old" 400/800 OS from disk and run almost all the incompatible software, and the other difference were trivial for most applications.

I know this information is probably available somewhere else on the net, but once I got started it was hard not to finish... hope this is of some use to somebody.

Joystick is not calibrated. Calibrate it before you enter. the paddle buttons are the "left" and "Right" signals from a joystick, so what is happening xlit thinks you are pressing the joystick when you are not.

2519. More eprom woes

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-18 00:00:00 UTC
From: idavis@comland.com
Message-ID: <858706090.8791@dejanews.com>
Source record: 74919

As most of you know I have been bugging this group about eprom information. Well, to keep up a proud tradition, here goes: I have borrowed an eprom burner for a couple of days, and bought some 2732 eproms. I decided for my first trick, I would make a copy of one of my carts. After failing to copy basic, and defender, I decided to try Atariwriter. Here's where it gets weird. I pulled the left eprom, and read it as a 2732. Just for grins, I read it as a 2532. I pulled both files into a hex editor, and noticed that both of them had readable text from the cartridge. Of course both files were totally different, and neither contained the same information. The text that was in one file was not in the other, and vice versa. Confused and frustrated, I burned 4 eproms, the left and right from the 2732 and the 2532 reads. I put the 2732 set in the Atariwriter cartridge, and nothing. I put the 2532 set in and, yes you guessed it, nothing. Can you use the existing cartridge, or do you need a special cartridge to put the newly burned eproms into. Anyone have any clues or know what I am missing? A little more of this, and I think I will just stick my head in the eprom eraser.
I appreciate all of the help so far.
Isaac Davis

Andrew,

I find it hard to believe that Bruce is actually copying games. But, with his Atari market slowing down, maybe he has resorted to these means.

If true....is it wrong, YES.

Is it legal without Atari's permission, NO.

But then, what about Seans multicarts? Who is to judge, I could care less. All prototypes have little cash value in my mind due to their questionable original nature. All collectors should consider ANY prototype to be a potential copy.......and pay accordingly.

Andrew,

You don't really believe Lance when he says he gets his carts from
Atari, do you? Wake up! He gets them from B&C. Lance is always
bullshitting about all his contacts at Atari. Why would Atari even
consider dealing with him. All I know is everytime Bruce tells me he
has something new, 2 weeks later Lance gets "a new batch from his
contacts at Atari" and it just happens to be the same stuff. Anybody
know how much Lance gets for his "authentic protos"?

John

2525. RCA Studio II

I have the following RCA Studio II games for trade only :

BLACKJACK
TENNIS/SQUASH

Both of these game are complete cart, instructions, and boxes. Carts and instructions are in nice condition. Boxes show some wear but are pretty good. Will trade for other complete RCA Studio II which I need for my collection, which is all except the above two and I also already have Fun With Numbers. Will listen to other trade offers as well.

Thanks! Matthew

Perhaps he has Atari's permission. I had a long talk with him yesterday. He said he only receives a couple of the prototypes and saves them to binaries. He then burns them onto the appropriate board (he talked about having some problems with the XE bank-switch carts).

I was offered a "copy prototype" of "Saving Mary", the Atari 2600 game written by Nolan Bushnell and John Skruch. (Is this like "the" original 2600 game??) He said he only received one board of this game, and would have to charge $200 or more to sell and original.

>But then, what about Seans multicarts? Who is to judge, I could care

I consider the multicarts pirate or bootleg carts, the same as Zellers or Cooper Blacks. They are unauthorized reproductions.

2527. Dot Matrix Printer

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-19 00:00:00 UTC
From: ssilicon@lax.net
Message-ID: <33325686.2074053@news.inc.net>
Source record: 74777

>Hello,
>
>Does anyone have a dot-matrix printer for an Atari 8-bit for sale?
>Thanks.

Hello there. As it happens, I have recently upgraded printers and
have my old one to get rid of. I have for sale a Citizen 200GX dot
matrix with the color option installed. It has a color ribbon in it
right now too, but can use a black only ribbon also if you prefer.
The only catch is, it is not specifically for the Atari SIO port. It
is a standard centronics style parallel type. Not to worry though
however, I have an ICD PR: Connection which plugs into the Atari 8-bit
and provides you with a parallel printer interface, and two serial
ports also. I'm willing to part with the stuff I have listed below
for $50 + shipping.

- Citizen 200GX printer with color upgrade (has Epson FX850
and IBM Proprinter III emulation capability)
- 200GX users manual
- ICD PR:Connection (with power switch mod I put in)
- Manual for PR:Connection
- A DB15 to centronics printer cable (I custom built it
it is good quality sheilded not ribbon cable)

I think this is more than fair. If interested let me know.

Cheers,

Jon

I agree. And I, too, would probably be interested in buying the finished product. Oh - and two joystick ports would be the absolute minimum. I'd also like to have RCA audio out ports to hook to my stereo, and maybe a built-in SIO2PC interface (it could be added VERY cheaply, just add the chip and diode to the motherboard and connect it to a serial port on the back of the machine).

I am the keeper of the Atari 8-bit BBS's list. You can find it at http://www.holyoak.com/atari/. You may find some boards on it that you weren't aware of. I will also check and make sure that your system and those mentioned in the other follow-ups to your post are on the list.

I've a spare copy of the Atari technical reference manual set (OS
software manual, OS listing, hardware manual) available in London.
People offering a PC-Atari cable get first go at it! :)

UK enquiries only, please as these are rather heavy.

Oh -- there's also a photocopy of the hardware manual. Since this came
directly from a former bigwig at Atari UK, I don't feel bad about
passing it on.

So the "prototype pipeline" gets murkier....

Video 61 is charging the same price as B&C, $19.95.

I think B&C had some protos for $14.95 as well.

If he is getting them from B&C, he isn't making much of a profit.

Wow, I think I have to rebuild my dead Atari XL to PC link as soon as possible
and start writing some device drivers for the atari. Would be great to have
a multi-platform OS. Binary-compatibility between Commodore, Atari and Apple.
Who would have ever thought that? :)

I realize many of you out there just use APE and so may not find this real useful. However, I just dealt with Midwestern Diskette and got 50 disk for $16.80 shipped to my door. They were great and I now own 50 smurf blue disks (okay, so there was a little bit of a down side). They are 20 cents apiece with a minimum of ordering 50. Labels are a dollar for one hundred. Where's the other $5.80 come from? Well, they have a $4 per order processing fee and every 100 5 1/4 inch disks costs $1.80 S&H.

So, if you need disks, give them a call at 1-800-221-6332

No. I'm not affiliated with them, but I thought it might help someone find the disks they need without scouring the entire Computer Shopper to find a media dealer who actually still carries 5 1/4 inch disks that AREN'T high density.

Howdy !

I have some question about the mio-board...

first: I know the mio board is very expensive. But I don't know, where to get such a board and how much is it.

second: what can I do with a mio-board? Connecting Harddrives and a serial device? I need primary a *very* good & fast serial interface. Will the Mio-Board do that work?

third: how to install the mio-board? Do I need change in the atari layout? How to install it on a XE Computer?

please help!

Dealers usually charge other dealers less money. Especially for big orders.
If Bruce gets them for say $5, he can sell a bunch of them to Video 61 for
$10 and still make a good profit.

My only problem with this whole prototype thing is if they are copies.
I wouldn't mind buying copies (I'm ignoring the copyright thing because
I don't know that they are illegal, Bruce might have permission or some such
nonsense.) but I want to know if they are copies.

> (It would also mean that if you did not change 212/213 then
> X, in the example above, would take the value 1536)

This information is correct... Also, the parameters that ARE pushed
<e.g. X=USR(1536,255,256)> are pushed low byte first.. Which means using
the PLA instruction, you would pull the high byte first. E.g.:

```
;equates

SAVE1 EQU $CB ;reserve 2 bytes <params are 16-bit words>
SAVE2 EQU $CD ;These bytes are unused by BASIC cart...

*=$0600
PLA ;get # of args <better be 2 in this example!>
PLA ;get high byte of first param. <0 for example above>
STA SAVE1+1 ;Put it wherever you want it...
PLA ;Get low order byte of param 1 <255 for ex. above>
STA SAVE1 ;...Ditto.
PLA ;Now, repeat the operation for
STA SAVE2+1 ;the second parameter. <1 and 0, 256 decimal>
PLA ;This leaves the stack clean, with the
STA SAVE2 ;return addr <set by BASIC> on top.
;
; SAVE1 and SAVE1+1 contain the first parameter as a 16-bit word.
; SAVE2 and SAVE2+1 " " second " " " " "
;
;...now do whatever you're going to do with the parameters
;
RTS ;Finis, return to BASIC.
```

...please feel free to debug this simple-minded example...

Also, Bill Wilkinson pointed out <in "Insight: Atari"> that the address
of the routine gets stored in 212,213, and can be used with (Zero,Y)
indexing to access working storage within the routine itself, while
remaining completely relocatable! <Assuming, of course, that you only

use relative branches, no JMPs or JSRs within your own code, etc...>

Enjoy.

...Markus should be replying to this, but until he gets a chance to do so, here is something to try... Under "Setup/Environment" there is an option called "Patch OS"... This might have to be turned on to use the H: device <since it presumably works with standard DOS 2.5>.. <or it might be for something else entirely!>

...if not that, then make sure you are using the DOS25.ATR file that originally came in the XL-IT archive <it may be a modified version that can access the H: device>

...or it could be as simple as you forgetting to type H:*.* in response to the prompt you get after the A <dir> command in the DOS menu...

...I have used the H: device successfully with XL-it v0.18 under DOS 2.5 <the one that came with XL-it> with the "Patch OS" option on... I have not tried it in any other configuration, and without more information that's all I can tell you. Markus will know better than I, since it's his software!

2546. 130XE pbi extenders/converters for MIO - who's got em, Puff? Woolley?

I've come across an MIO unit that I'd like to attempt to hook up to my 130xe. I vaguely recall someone selling 130ECI/PBI extenders for this purpose.

And...while I'm on the subject, does anyone have any recommendations on SCSI devices to attach to the MIO? I've got an old MAC tape backup unit, that seems to have a centronics-like interface (SCSI perhaps?) that might be interesting to fiddle with. What drives are compatible?

And the usual...any and all help greatly appreciated!

I can't wait to play...

My Atari 800 stopped accessing the 810 disk drive, only "memo pad" pops
up on the screen.
Does anyone know what chips on the motherboard control the disk I/O?
Thanks, Jim.

2549. Mostly dead 800.. help wanted

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-19 00:00:00 UTC
From: Ron Kneusel <rkneusel@post.its.mcw.edu>
Message-ID: <3330D03A.3B89@post.its.mcw.edu>
Source record: 74799

Greetings!

I came across an 800 and an 800XL, both with power supplies and a few carts and manauls. When connected to the TV and powered up both machines respond with a blank green screen. I know the 800 supply works as it ran my 400 (which then told me the carts are good)

I pulled the boards out of the 800 and reset the chips to no avail. I find it odd that both machines are acting the same way.

If this is a common problem with the 800s I'd like to know the cure. I'm especially interested in getting the 800 working.

Any help appreciated! Aside from playing Star Raiders on my 400, I'm Atari illiterate, so apologies if this is a stupid question (I _did_ look in the FAQ first)

>amymore?), etc. at prices to make this in any quantity for that price.

Well, a standard R6502, or maybe a W65C02S from the Western Design Center which can run at upto 20MHz (http://www.wdesignc.com/chips.html), would do the job. As for the other custom chips, if he can't get hold of them, maybe he can just sell empty motherboards. Perhaps even if he CAN get hold of say 100 sets of custom chips, I would still want to buy an empty motherboard to cut down the cost. I have for about 5 spare 800XL's and plenty of old 256KB SIMMs. It wouldn't bother me to transfer a whole chipset out of an old 800XL to the new motherboard.

It depends what your needs are. A stock 16k Atari 400 (or Atari 600XL)
for that matter is pretty useless (apparent from Cassette software or
cartridges) My answer would be a RAM upgrade Atari 800Xl. You can hook
up devices like aBlack Box or MIO to use a hard drive and other Non-Atari
devices. (I own a256k 800Xl so my answer is biased.) And I never like
the XE line of computers...

Anyone that tries to keep the Atari 8bit alive should be commended.
Anyone that tries to make a fortune on the Atari 8bit by outright
overcharging deserves no respect.

A few of those carts I beleive we released on cartridge. Besides can't
someone tell a copied cartridge from an original examining the cartridge
shell? I mean Atari Carts have the family CXL 4002 or RXL 4040 labelling.

PLEASE don't trash the 8bit line, at least give them away to a school's hardware class or salvation army or some charity. By the way a 1200XE? Don't you mean 1200XL? I beleive you can fetch the most money for that. The other stuff really isn't worth that much...

Howdy !

well I'm very interessted, how the other atari enthusiasts are using there atari computer. Since PC & Mac's are the better one, who need a Atari?

I have a Atari next to my PC. I love my 8-bit machine but I don't know what to do with them. I can't imagine, writing a letter on my Atari or communicate with my modem through it - in all tasks is the PC better than my atari ... the last thing I did on my 130XE was hearing MD8 Files (sort of MOD-File) with 4-bit sound qualitity :) ... and this one sounds muuuuch better on my General MIDI/ Soundblaster Pro.

Just playing good old games?

... please tell me, what are you doing with *YOUR* ATARI XE? ...

Don't have Bob's e-mail Address, nor his BBS address, (it's on one of my receipts somewhere!) But to address the question, does DISKCOMM do any compression. I beleive it does. I remember reading somewhere DISKCOMM does maybe 10-15% compression on some files (so it's not a very good one, use ARC instead)

Hello!

I want wo buy the following games:

Archon II: Adept
Bandits
M.U.L.E.
Necromancer
Fort Apocalypse
Shamus
Boulder Dash
Wizard of Wor
Elektraglide
Gateway to Apshai (Cartridge!)

If you have any of those (or others I might like) and live in Europe,
I'd appreciate your offer.

I have numerous games for sale also, but the list isn't complete yet.
Mostly tapes, though, and many of them by Mastertronic. But I also
have "The Pawn" and "Mercenary Compendium" (incl. The Second City)
on disk, IIRC.

Hello there. I never meant (nor did I looking at the looking at the
quote) to imply that the DCM compression was the same as used in ZIP.
I only mentioned that it is a compressed format, which it in fact is.
If your information is right then it is a very simple method of
compression... better than a sharp stick in the eye though. :) I
just knew that because the DCM files are most often smaller than the
the disk they store. Sorry I do not have Bob Puff's email address.
He is still in business though in Rochester NY. His business is no
longer called CSS though I have heard.

Cheers,

Jon

> definitely ask him, and not listen to me at all.... <Does anybody have
> Bob's E=mail address??>

The DCM file is compressed using RLE compression (Run Length Encoding).
There *IS* a block type that is for uncompressable secotors (those that
either don't compress or actually get bigger when compressed).

Using RLE sector is compressed based on patterns of bytes...

"EEEEEEEEEEEEEEEEEEEEEEEEEEEEEEEEEEEE" would compress to {40}E where {40}
is the ASCII code for 40.

"EFEFEFEFEFEFEFEFEFEFEFEFEFEFEFEFEFEF" would compress to something like
{20}EF (it would be a bit more complicated than that.

There are numerous block types in a DCM file and my VB routine decompresses
99.9% of them... there is one block type that i've only seen twice in any
DCM files and I have no idea how the heck it's encoded as the doc's I had
were incorrect!

Will

BTW: I will dig up that code ASAP for you

Source record: 74856

Howdy,

My dad sent back to me my trusty 800xl system, complete with Indus GT drive, 850 interface and some old books, carts and disks (still works, amazing!)...sure brings back memories. Anyways, I'm excited about getting it up and running...you know, play some of the games I never had that I can now download from the net. Problem is I can't get the files over to the thing. I had tried using MyUtil and my friend's PC to format Atari disks but MyUtil gave me an error ("Error Track 0" or something similar.)

So now I'm thinking I could just construct a null modem cable and connect my 800xl to my Mac. I've got all the cables. I suppose all I need now is a term program on both ends, correct? If that is the case, can anyone point out a place that carries Atari term software?

BTW, I could use an extra drive or two...Anyone willing to sell to me?

Thanks.

-I'd like to know your favourite ten games for the Atari 8bit... any chance of
-e-mailing a list to me so I can include them on my homepage
-(www.kwll.demon.co.uk) along with the other dudes..?

It worked.
My top favorite game is:

NOW EVERYONE ! DONT LAUGH!

[1] MATCHBOXES by Al Chasar (who actually
gave me PERMISSION to put the game in the archive!)

And following, in no particular order:
[2] Realm of Impossibility
[3] Ultima III: Exodus
[4] Elektraglide (Even tho its too hard and
Adam Michael Billyard publicly called me a "wanker") ;-)
[5] Trivia Quest (royal software)
[6] Zenji
[7] Behind Jaggi Lines! (DARE TO BE
DIFFERENT!, I always say!)
[8] MULE (3/4 player games)
[9] Ixion
[10] Pitfall II: Lost Caverns (solved in 18:18)
[11] Caverns of Mars (So SUE ME! I have 11!)

When you link them on your homepage, please link the ATR versions of Elektraglide and Matchboxes. (Easier that way, the file version of elektraglide requires finesse to load properly, and I dont believe will load on an emulator).

What I like doing almost more than playing the games is cracking them.... but I guess you all knew that.

I agree. Two game ports is what I consider a minimum. One is below
minimum. I think in this day and age, except for the few Atari8 only
owners out there, game software is what people that would be
interested in this unit are hungry for. Let's face it, if a person
has a PC or a Mac, they are not going to get such a unit to do
databases & spreadsheets on. One needs to have two joysticks used to
play greats like Ballblazer, or Archon in head to head.

Cheers,

Jon

>amymore?), etc. at prices to make this in any quantity for that price.

So long as it is a 65C02, it doesn't matter the speed rating so long
as it meets or exceeds 1.79Mz. The CPU does not generate it's own
timing. It is clocked externally and will run at whatever speed it is
supplied timing with. The limit of course being that if you try to
run a chip faster than it is rated for, it may over heat & malfunction
or be damaged; depending. So if all Curt can get is a 10MHz rated
65C02, it will quite happily run at 1.79MHz. It would be cool of he
put in a turbo switch! Hehehe.

Cheers,

Jon

PS: Better yet, a three way "turbo" switch... PAL speed, NTSC speed,
and flat out smokin'.

Yeah, but what about the custom ICs? I'd be interested in this
machine, especially at that price, but I can't imagine where you're going
to find new ANTICs, POKEYs, GTIAs (heck, do they make 1.79MHz 65C02s
amymore?), etc. at prices to make this in any quantity for that price.

> neither contained the same information. The text that was in one file was

That's totally expected, since the two or three highest address lines
are not at the same pins between the 2732 and 2532. I think the 2532
has more in common with the ROM's pinout than the 2732, but if your
eprom burner has a setting for reading ROM, use it.

You might find that the data off of the 2732 setting are 4 or 8 segments
of identical values; for instance, the same data would appear at offsets
0000, 0400, 0800, and 0C00. If so, it indicates that the setting is not
compatible with the pinout of the device you're trying to read.

> do you need a special cartridge to put the newly burned eproms into.

If you use an existing cartridge, you can only stick in ONE 2532 which
gets you a 4K cartridge. If you put in TWO eproms they will map to the
same address range and will try to drive different data onto the bus.
The two ROMS can coexist without additional glue logic because (I think)
one of them has its enable line inverted. Can't do that on a stock
eprom.

> Anyone have any clues or know what I am missing? A little more of this,

As I wrote in a previous reply, to get anything bigger than 4K using eproms, you pretty much have to use a custom PC-board. 4K is enough for several games though (I think -chuckle- Video Easel is one).

: This still doesn't answer my question though. Did you actually implement
: a TCP/IP stack in all its glory on the 6502?

Ok, lets have a look at it:

- SLIP code to send/receive IP packets via serial line
- ICMP layer to reply to PING echo requests.
- TCP layer to build reliable connections
built upon that:
* A filesystem for the OS/A operating system to mount files via Internet
* A WWW server
* Discard, Echo and Chargen TCP ports are also working
* A remote exec in preparation

Yes, I guess that's a real TCP/IP stack :-)

so long

My $.02: I like the original 800 case better. Looks more like "Dr. Who"
and less like "Star Trek". Plus the four joystick ports and right
cartridge slot are cool...

Anybody here own an 810 drive? Ever notice that the top and bottom
halves of the case are the same piece, with paper labels covering the
extra set of holes <SIO port, power, etc.>? Mine is like that, anyway...

Unfortunatly the word 'prototype' has been repeatedly and consistantly
perverted by profiteers and in general in rec.games.video.classic to the
point where it no longer has much real meaning.

I've always considered a REAL PROTOTYPE to be a copy of a game that
was never mass-produced, produced by the manufacturer. Any game produced on
a mask rom, even if its in a 'lab label' case I consider to be a sample.

Games that were mask rom produced, but not distributed I consider to
just be VERY RARE PRODUCTION TITLES. IMHO anyone making copies of these
games, and then calling them prototypes, or even 'copies of prototypes',
is at the very least misleading his customers. imho.

Multicarts are of course pirate copies, but seem to be regarded as
a service to the community by the general propulation of rgvc. Sort
of the situation with the Jellystone Park archive.

Not to recreate the whole piracy debate, but as the owner of many
multicarts (most of my own creation), I have always regarded them
as mostly worthless in value. I treasure the real deal, no matter
how many copies can be had for free.

The above are just my personal critera for collecting, and should be
taken with a grain of salt.

Steve

>tell me you're not going to cannibalize a bunch of stock Ataris to do
>this?!?!

Not to mention that it seems very unlikely that he'll be unable to put the thing together for that price. I've been checking out some PCB manufacturers, just to get an idea of the cost of a low-volume board. I found a company which specializes in low-tech, low-volume production. Their price for a 2-layer board roughly the size of the 800XL's would be in the neighborhood of $50. And that's for a board *without* plated through holes; you'd have to go to a different company to get them, and it would cost more. (Plated holes are essential for the avoidance of many problems. You almost never see unplated holes, except in extremely cheap cheeseball stuff.)

And then there's engineering time. Unless somebody is willing to donate a lot time, there will be a lot of reverse engineering, design, and board layout to pay for. There will also need to be a few debug prototypes, to catch problems before committing to production. For a run of a hundred units, these costs are significant.

I'm sorry to say that I just can't see anything like this selling for the prices Mr. Vendel has been throwing around. If he develops and produces the machine on his own dollar, great -- just don't send him advance money on something which is far from certain. I learned my lesson when I sent an advance payment on a FAST Technology Turbo030 for my 1040STe; as far as I know the damn thing never even got past the prototype stage. It is my opinion that the guy running the company had the best intentions in the world, but good intentions don't mean a thing in engineering. He had successfully done 68000 accelerators before but the 68030 accelerator was evidently too much.

Perhaps it could be a case of - unlikely, I know - of having
a BASIC program being exactly N frames long and the program
doesn't reset VCOUNT, it just comes back to the point where
VCOUNT has come around again to the same value as the last PEEK.

I don't understand why VCOUNT would be reset; shouldn't it *always*
give you the current scan line (+/- 1) being drawn? This suggests
that a POTGO poke will throw VCOUNT off permanently which sounds
unlikely as well.

My Atari isn't ready for action; perhaps you could try different
POKEs just to make sure, or add another PRINT in before the PEEK
which, if POTGO resets VCOUNT should just create a different
regular pattern; if POTGO does not reset VCOUNT this should
destroy the pattern. (He said fingers crossed)

Andrew,

Do the math, you buy one eprom proto.....and start copying the shit
out of it, then it does not cost the same as the "original".

Again, I have no clue if this is happening and would hate to even
imply impropriety. I see John Hardie has commented in this thread, and

I feel pretty comfortable with his judgement (make that very
comfortable).

It's buyer beware with Eprom carts plain and simple!!!! Don't fall
into the "proto" trap that many collectors here do.

2592. WANTED: "Cubie" - game circa 1984

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-20 00:00:00 UTC
From: adavie@mad.scientist.com
Message-ID: <33314690.65798802@news.comcen.com.au>
Source record: 74726

Well.... many many years ago now, I released the Atari 8-bit game "Cubie" as freeware. It involved a pattern of cubes which were shifted into position to match a pattern. In any case, my Atari was stolen yonks ago... but now that there are decent PC emulators, I was trying to find a copy of my old game... just for some nostalgia.

Has anybody heard of this game, and is there some kind soul who can provide me with a pointer to, or better yet, a copy of my game?

A friend of mine wrote "Xagon" and I managed to find that - we released our games simultaneously, so I am so very hopeful.

Cheers and thanks
Andrew Davie
Sydney, Australia.

Well, I can't say for sure, but Toad Computers claims to have the
256K version for $99 which seems pretty good to me. Whether they
really have any in stock, I can't say.

>
> second: what can I do with a mio-board? Connecting Harddrives and a serial
> device? I need primary a *very* good & fast serial interface. Will the Mio-
> Board do that work?

The MIO will work for that, but from what I understand the Black Box is
more reliable for serial. I don't know if it is hardware or software, but
I recall Bob Puff mentioning that he compensated for a bug in the MIO to
achieve 19.2.

>
> third: how to install the mio-board? Do I need change in the atari layout?
> How to install it on a XE Computer?

Now, I assume you have a 130XE. In that case you need a ECI->PBI adapter that
aren't too expensive.

>
> please help!
>
>

I have an MIO and I am happy with it. It's one advantage over the Black Box is
that it has 256K or 1 Meg as a super-fast ramdisk. Other than that, the Black
Box wins. The BB has better serial, SCSI, and it has the option for the floppy
board.

Still, I like my MIO (mainly cause I have it and am cash poor)

Video 61 is not selling actual one of a kind proto's they are burned copies. Go to B&C and get your copies. At least B&C is honest and lets you know that they aren't lab loaners or prototype originals. They even make their own cool looking labels that they place on the cartridges. I see nothing wrong with B&C getting unreleased games out of the door. I got Super PacMan, Berzerk, Pan Man Jr, Video Puzzle and they are all fanstastic games, its nice to have some fresh new games to play and you don't have to battle over getting the only copy available in an auction.

2597. Re: Questions about MIO..

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-20 00:00:00 UTC
From: BobKlaas <bobkla19@tcd.net>
Message-ID: <33316362.5B0F@tcd.net>
Source record: 74731

FTE, has all the rights to the MIO, and unless Mike sells them off to somone else the MIO in the NEW unused state is not available anymore.

You will have to find someone who has a Used one they are willing to part with, or latch on to a broken one, I can fix them.

Not sure what through-put you are looking for you can reach 14.4 through its RS-232 port and 19.2 with a Hayes to Hayes modem, at presant anything higher overruns the Atari's buffer and is not practical.

To connect on to a 130XE you need to find a card that pluggs into the cartridge ports, ICD made them but FTE bought the rights to those. I have the one Supra Corp used to produce as I bought the rights from them and this one is still available.

The MIO, will connect to an 800XL through the PBI port it is a stand alone unit with its own case and power supply nothing to install actually other than plugging it into the computer..

hope this helps?

bob

Alex,

remember, cost, cost, cost. I can't slap everything in the world onto the system. It'll wind up costing $1,000!!!! I'm looking at the ATR8000 drive design as well as the Astra Big "D" and the Atari XF551 controllers. Its doubtful that the controller will be included, but will end up being an add-on daughter card that will plug ontop of the motherboard for floppy drives.

Curt

2599. Re: How are !you! using your Atari?

Source record: 74733

I have one system setup and running a BBS 24hrs a day has been online
for years.

Have another system sitting along side I use to check out componets,
modeming to other boards ect..

Have a Atari System set up in the other room that my Granson and
Grandaughter use to entertain themselves. My elderly mother uses the
system to write letters as she can see the 40 col letters better than on
the 80 col IBM.

Kinda a slower relaxing pace with a lot of different componets still
available for the Atari 8-bit computer. Have several hard drives
attached, along with 1 system that uses an Iomega Bernouli Box, 20mg..

2602. 8bit printer - ASCII?

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-20 00:00:00 UTC
From: ejh7678@isc.rit.edu
Message-ID: <5grn66ese1@news.isc.rit.edu>
Source record: 74736

Greetings, all.

I have a quick question. Is it possable for an atari 8bit printer to be used on an IBM? I know that the atari printers use ATASCI or whatever it is instead of ASCII, but is there any way around this?

The reason I was wondering, is becaus ei own that tiny 8bit plotter that also works as a printer and i think its great. What i really wanted it for is to be able to hook it up to one of my IBM's com port for use as a generic text-only printer. To print out those quick little info jobs that is for personal use only. Like a phone number, or an adress, or a web page. It would be great to just print form the clipboard to that keen little printer.

Does anyone know if such a thing can be done, and has anyone tried it?

thanks,
ed heffernan.

I don't know about the 65 XE, but I've had no trouble using the same
power supply on a 600XL/800XL/130XE. They all use 5 volts DC.

:
: The MIO will work for that, but from what I understand the Black Box is
: more reliable for serial. I don't know if it is hardware or software, but
: I recall Bob Puff mentioning that he compensated for a bug in the MIO to
: achieve 19.2.

I'm in occasional contact with Bob Puff, like others here. I've met him in person many times when I was in Rochester, NY, for college, around '83-87. I believe we once got into a tech chat about the 8bits and limitations, as well as some future plans, but it's been too long to remember them.

As an owner of the Black Box, I can honestly tell you that it's one of the best things I've seen for the 8bit. I still have mine. It took around two hours for me to make the cables, and make sure they worked, all without soldering them, rather, just push them onto the connectors. Once I made the mistake of plugging the power cord in wrong, blowing the RS232 port chips. Bob went so far as to tell me what I needed to do.

The P:R: connector when I owned one back then gave me so much trouble, that it was well-known through the area BBSes, for its constant locking up of my system, screwing up the printing, etc., that I just went and traded it for an 850. I still have it today. Heck, I could sell off most of my 8bit collection, keeping just an XE, a couple floppy drives, and other necessaries. I'll post them later.

Doing soldering is bad enough, but to sit there with a butane torch and remove parts from old motherboards as well, please no!!!

BEST and B&C have a large quantity of Atari chips available, so making 100 units wont be too hard to come up with the parts.

Hi Harry,

I saw Superman 3 at a friends house a few weeks ago, I think the 2600 version out does it. Your right, the later software wasn't as good as it was suppsed to have been considering the system. I definitely like Super Pac Man and Pac Man jr, video puzzle is cool too and Star Gate is actually damn good as well.

But not just any old 6502 assembler. What you saw is part of the Atari DOS listing. I remembering seeing that at the theatre. Don't know if it's legible on the video disc version, I'm sure it's not on the VHS tape. Maybe if it is released on DVD...

I noticed that too when I saw it in the theater years ago. I seem to
recall that it appeared to be a portion of the 400/800 OS source code
(including the code name "COLLEEN") from the Tech Notes & Hardware Manual.
I don't think it's legible in the video release.

Mark

> ... please tell me, what are you doing with *YOUR* ATARI XE? ...

Well, my XE units are sitting in storage, but my 1200XL is going strong. :)

My 1200XL is SuperVideo upgraded, and has the Ramrod-XL 256K upgrade as well. I use SpartaDOS X and RTime-8. I use FlickerTerm-80 to call my ISP. My Atari is the only computer I use outside of my workplace, by choice.

I do the typical stuff with it, I suppose. Other than calling out, I use it to play games, keep things organized with a database (SynFile+), keep track of my personal finances (SynCalc), and write the occasional letter (AtariWriter Plus). When I have time, I play the greatest games ever made - Atari 8-bit games.

Oh, and I also use it for my freelance writing. I write supplements for the Traveller role-playing game (published by Imperium Games) after my "day job" - often into the wee hours of the morning. Yes, I'm actually earning money with my Atari. :)

Once upon a time I programmed using the Atari. I think my "Critters" artificial life program is still on the Atari Archive at umich.edu (this isn't me urging you to run right out and download it[G] - it's a simple program, written in assembler - just something I thought was interesting at one point). These days, I only program to do analysis of some of the RPG rules I write. I usually do that in Atari BASIC - usually 20-30 line programs, run only a few times then forgotten, so speed doesn't matter.

Anyway, that's what I do with my Atari.

I got a cart from a kid about 5 years ago. It's a standard brown cartridge with Atari logo on back, but with a white paper label with "SUPER PAC MAN PROTOTYPE" and and some low rez laserprinter art printed in blue ink. (No label underneath.) From what you're saying, it sounds like what I've got is not a real protype?

What Hard Drives can I hook up to my MIO, and what
cable(s) will be required? Do I need a controller card?
I assume I can only hook up a SCSI drive, however I don't know
enough about the MIO or SCSI drives to be sure.
Do I need a SCSI drive enclosure to hold the drive?

Please send replies to this news group and or: slycy@geocities.com

I say, put in two pokes, so that you can get stereo sound out, and that would also have the side-effect of allowing either 8 joystick ports, or room for LOTS of ram-banks!!

Hello AtariSysop and Bernard! There are still many 8-Bit BBS's In north
america, as well as europe, and many of the sysops are on this newsgroup
as well! About 6 months ago, My BBS (In vancouver BC), The Jail
(toronto), and Beco Tel (Bernards BBS in the netherlands) started a
network to revive the historic "IAN" (Intenrational Atari Network), now
called "IMR" (International Message Relay) and now have 16 BBS's online
as of the beginning of march! The following is a comprehensive list
that I have been posting Monthly to the network. This hopefully will
help you locate a BBS that is close to you that you can network with as
well, and then you can enjoy a new wealth of topics!

One problem is, that the second port of the first PIA is needed to do
Memory-switching in the XLXE modells.
I thought about this some times ago.
Maybe it's possible to add a secondary PIA and make it switchabele.
F.e. one XL /XE compatible mode and one 800 compatible mode (which
switches the internal ROM to an 800 one to. One possibilty is, to
install a latch only shadowing the $D303 adress to make the
memory-switching and left the second port to Joysticks.

That is curious. Superman 3 was my last project at Atari and I never
came close to finishing it. It was unbearable working there at the
time. The marketing people from Warner had completed their Coup of the
company. Now I had to meet with them and be their design puppet. They
would play movie director and tell me what they "visualized" the game
to be, as if we were shooting film. I would explain that I had worked
very hard for a couple of years not only working on ideas for fun
games, but also learning the archetecture of the 800 computer, so I
had a good idea what was possible. Heck, anybody can dream. So they
came out with a design that paralleled E.T.(which in my opinion was
the worst video game I've ever played). (and which was the result of a
crash effort of the Home Computer Division's finest).

E.T. was also the only original game to come out of the home computer
division that I can remember, with the exception of Chris Crawford's
work. The division was filled with frauds, and mainframe Control Data
rejects. When Atari wanted a game done for the 800, they would have
it done elsewhere. And the idiot that they made my supervisor a few
weeks after I started Superman 3 couldn't even send an SOS, let alone
write 6502 code. So it is possible they had it coded out of house like
the rest, but if they stuck to the plan Marketing wrote, they did the
world a favor by not releasing it.

That should not be a problem if you only need two game ports. Game
ports 3 & 4 are the ones that were saacrificed in the XL/XE to allow a
bank selection scheme. I would be quite happy with 2 ports, and XL/XE
compatability. Now then, a switchable feature like you describe can
only be better but of cost? Curt has a lot of thinking to do.

Cheers,

Jon

```
hi

what to do with small atari ?
well, dont't even try compare it with PC xxx (except XT :))
but.. enjoy the newests demos , listing to stereo music,
or if u want to hear almost PC quality of sound ( ! ) just install
in XE a covox...
learn to code motorola procs .. :) and more others :)))

greets
dhor
```

Er, according to _my_ FAQ :), it's best described as a 64K 130XE. (In as XE case rather than an XL case.)

I of course have never seen one, just trying to pin down reports from European friends.

>Pacman JR (XL/XE)

I bought these two from Video 61 this week.

Stargate is pretty cool. Not as playable as the Defender cart, IMO, but they were obviously going for an exact port from the arcade, and largely succeeded. Much harder than the Defender cart! (which I can personally play indefinitely...)

Pac-Man Jr ROCKS! An exact port of the arcade, with playability to match. I have encountered a bug just once, where one of the ghosts got stuck at the bottom of the screen, below the maze, and couldn't get back in. I didn't see how he got out. Highly recommended!!

Source record: 74675

```
XL-it! 0.19 is ready for downloading:

http://myst.slcc.edu/~markus

This version corrects several collision and priority problems.
Furthermore there is (early) support for color-artifacting
(try Loderunner or Ultima to see how it works). It's by far
not perfect.
The documentation is now available in HTML and plain ASCII.
Please read the "chglog" for other changes.

Have fun,

Markus Gietzen

And this may be only a hint at that.

Anyway, the symptoms you describe also describe how my system behaves if I forget to give my modem an at&k4 command before dialing.

I have a Zoom 2400bps V.42bis modem, connected through a P:R:Connection. I need to do the
at&k4 no matter what I'm dialing into, and no matter what comm program I'm running.

Nobody's ever really been able to explain it to me, but I know it has helped a few other people. Try it!

What &K4 does is select XON/XOFF flow control. Apparently, all/most
atari serial interfaces or at least R: handler software does not
support hardware (CTS/RTS) handshaking (selected on the modem via &K3
which is also a default). Anyway, that's why the &K4 setting helps a
lot. Can any of you really knowledgable Atarians substantiate or kill
that statement about supported or not supported handshaking for Atari8
serial operations? Provide some details? Which interfaces or
handlers do or do not?

Cheers,

Jon

Sure. The HP will run text OK, but you will need a driver for graphics.
The printer commands are the same, even from an 8-bit. I wrote a simple
graphics driver for my DeskJet, which is pretty much the same...

> got against the good old 8bit?

Hey Eric...

Good to hear from you again, and I really hate to inform you of this, but
the ST is not an 8-bit machine!

I have, however, gotton that ol' 800 working well with the disks and
everything... so I'm looking to move some basic-type stuff onto the
floppies for that as well.

My question is this: Does an ST have an SIO interface to hook up 8-bit
peripherals? I'm getting an (Not old - middleaged) 1040ST in May.

2648. APE questions and comments

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-21 00:00:00 UTC
From: jeffk914@groucho.roc.servtech.com
Message-ID: <3332f7bd.21910195@207.126.101.83>
Source record: 74688

Well, I finally got around to building a dedicated machine to do nothing but run APE for my Ataris (386/33, 4 megs, 120mb HD, CGA monitor, works terrific)... I'd played with APE a while ago (version .9) and had a few problems with it working with the UltraSpeed+ OS that I use, plus the SIO2PC cable appeared to nuke both my drives. A couple questions:

First, if it possible for the SIO2PC cable to cause a fuse to blow on the disk drive? Both my modified 1050 and my stock Indus GT refuse to turn on after a little while connected to the PC (attempting, unsuccessfully, to make some PRO images) - I opened them both up and found no evidence of a fuse, so I'd assume that it's in the box in the middle of the power cable - does this sound correct, and if so, is it feasible to open it up and replace it? (Also, I haven't found any of the archives that have any PRO images... Are there any floating around?)

Secondly, a small question (actually I admit that I haven't read all the way through the docs yet, I've been too busy playing :), is there a way to have APE default to "stupid" emulator? Reason being that in Smart emulation, APE ignores the UltraSpeed+ OS. (A little background - it's a switchable OS, consisting of the stock XL/XE OS, a 400/800 OS, and a very modified version of the XL/XE OS coded by Bob Puff, which, among a gazillion other very-cool, can't-live-without-once-you've-tried-'em features, defaults to have UltraSpeed disk transfer on. With APE smart mode, the OS thinks there's no disk in the drive. Changing it to Stupid makes it work right, and all disks boot in UltraSpeed (APE shows Happy Read Sectors.) I actually was fortunate enough to beta-test the OS way back when Bob was actively hacking 8bits, during the time he was writing DiskComm and long before the days of BobTerm, and I'd regularly have my computer chopped up by him. :) It's really a fantastic upgrade, I can't see using an 8bit without it.

Third, does anyone have a copy of the program "Fenders" in an ATR format? This was my favorite utility for putting a menu in the boot sector of a floppy so you could boot off of it and get a menu of games to play without loading DOS. If I could get my 8bit drives working again I could theoretically copy it over the SIO2PC cable, but all such tries have been unsuccessful... :(

(And yes, I'll be registering APE very, very quickly - it's definitely worth it. :)

: They just don't make computers like they used too!

Speaking of which, there's a German company called Phase 5 which is developing a "super Amiga" type computer. Since the Amiga is, in many respects, the big brother of the Atari 400/800, I thought this might be of some interest to Atari 8-bit fans.

The machine is called the A\Box, and information in English can be found at http://www.phase5.de/news/projectinfo/aboxinfoe.html

(There are, of course, original German documents available from the top-level page.)

Any computer that boasts an "integrated display-list RISC processor" (...RISC Antic? :) has to be cool. <grin>

Try the PIA and or the Pokey chips.

But are you sure it is the Computer? What do you get when you pull the drive out of the circuit? Maybe just the drive is not accessing and that could be the CA3086 or LM3086 on the side card of the 810.

Best computer Atari ever messed with and quit was the 1200XL, darn shame they did not follow through with their plans for it..Mine one is yellowed because I am a smoker..have one put away that is still nice and bright.

Still pushing the Atari to its Limit and Atari Corp said it couldn't be done..!!

Good for you!!!

Lets start a freking WAR....

Old Screwed Atari Game Programers I/WE want you and your efforts..Have an inovative Idea want it Distributed without being SCREWED?? Ok I have been reapiring these things since the 80's..Know how you feel..Atari would not at the time authorise me/myself as a Repair Center but, authorised my set up to a local dealer as a Repair Center...he took the product I fixed it then he passed on..sad..ok lets gang up on the comunity..if they want New Products..you furnish I distribute we share whatever is reached in an agreement...as to Nice Fancy covers..who needs it..documentaion is a must..I am not above helping in this area..Nice Flash covers ect cost $$$$ and what happens to it..gets abused and not useable..MAKE SENSE??..GET BACK THROUGH E-MAIL

Lets start a new Thread..What do you the user think?? Out of line out of sight???

I've been following this thread for the last little bit and I'm intrigued
by the possibility of an 8-Bit Atari with case/keyboard/slots, but is this
really a viable possibility or something more along the lines of actually
getting your hands on a 1450 (with speech)? I'm certainly interested if it
turns into an actual product for a fair price! :)

I was wondering if anybody out there has a copy of the programming manual
that came with the atari XE game system on disk
If you do could you please email it to me.
If not a few programming pointers for this systam would be much
appreciated
Also,I was wondering if it would be possible for me to modify an
old APPLE IIe disk drive I have to make it work for the atari as a disk
drive for this is almost impossible to find.
Actually any information about this system would be great.
Thank you

The PBI 130XE extenders are available from :
K-Products
4267 W. Midway Dr.
Salt Lake City, Ut. 84120

Price $19.95 s/h $4.00

It does have a cartridge port.

As to Scsi devices, any Scsi hard drive that will read and write 256k bytes per sector. Or through the use of an Adaptec 4000, 4000a or 5500, and possibly the small Omti card MFM to Scsi converter you can attach MFM drives that read and write 256k bytes per sector ie: Maxtor 1140 140mg hard drive..

The Tape no on has come up with software to run those as far as I know at this time..but not impossible?

Well Thank You!!

Recently BBS Express! Professional (tm) has changed programers and when the new programer announces his presance and updates to the program all will be pleased. There has to be something desireable in bringing new blood into a system. Either move on to better times, programs or cease to exist. We chose not to cease to exist and hopefully the support from the Pro community continue as it has in the past, when Keith sold out to myself.

All I am at liberty to say now is that there are some new inovative ideas being persued. If nothing else the programer has pull in my reins and commited me to non violent action!!!...haha...refering back to my post on sending my your wife, girlfrind ect...

Actually I received several replys with them attached..!! still have not figured out a way to take advantage but who knows what next year will bring on the Internet..??

I have responded to some of your posts in the 8 bit Atari group and
never recieved an answer back. If you claim to have been a developer
at Atari........what's your name?

I thought you might have been Rob Zdybel but I know that's not true
after reading this stuff. Unfortunatly I have to challange you because
I think the odds are 90% you never set foot in Atari.

Name some names!!!

>E.T. was also the only original game to come out of the home computer
>division that I can remember,

WHAT???

Please explain, I can name at least a dozen people who wrote 400/800
code in house.

with the exception of Chris Crawford's
>work. The division was filled with frauds, and mainframe Control Data
>rejects.

While Chris is a super nice guy, and very sharp, I know of no
programmers at Atari that would say anything kind about him or his
programming talents and game designs.

When Atari wanted a game done for the 800, they would have

The DCM file format uses some interesting RLE compression techniques. There
are a few (around 5 or so) different block types... each block is basically
a sector that is either 'normal' (uncompressed) or compressed using a
different
version of RLE. I do have some VB code around here that I wrote a DCM
de-compressor in for a utility program I wrote.

If I can ever find it I will post it ASAP.

Will

...yeah, but what about those of us who have AT keyboards and lack F11 &
F12 keys?

No, don't tell me to get a new keyboard, the new ones are all
lightweight & fll apart under heavy duty cycle..

2680. FS: Atari Computer Goods! Some Shown! FREE Catalogs!

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-21 00:00:00 UTC
From: bensmith@linda.teleport.com
Message-ID: <5gtstn$i24$1@linda.teleport.com>
Source record: 74765
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I

will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Hi,

I've got a HP 4ML (same as the 4L - except it does PostScript
and PCL and has both a serial and parallel connection). I'd
like to connect this up to the Atari via the BlackBox. Will
I be able to print to this printer in PCL mode??

2684. XL-it speed shifting problem

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-21 00:00:00 UTC
From: mvh@worldnet.att.net
Message-ID: <3332aca4.5481835@netnews.worldnet.att.net>
Source record: 74769

I am using the excellent XL-it! 0.18 and I use the -lock60
command to keep the speed normal. I have a Pentium 200, and
it runs too fast the other way. I guess I am using the american
NTSC frame rate. Anyway, I noticed that with most games, when
I first go into the game, the game is running at or slightly above
normal speed, then after about 10 seconds, it will slow down. Now
that changes in speed are only a few %, but it is noticable. Games
like Ballblazer, Mule, Boulderdash have done this for me. I am
using Windows 95, and have noticed this in the dos window
(full screen) AND when I do a restart in Dos mode (out of windows
entirely). Sometimes the game will run slower and then speed
up slightly. Weird.

Also, I can't get Shamus, Bruce Lee, and Encounter to work
properly. Seems like collision problem.

Anyone else have these problems? Aside from a few little
quirks, XL-it! is one of the best emulators around.

Regards,
Mike

If you have any questions or simply need a hand please let me know...

There is the switch for a block type at the end of the second routine
that has the comment BIZZARE... this is the one block type that I never
could figure out... the doc's I had were incorrect totally, and I could
not find any more info... but then I only ever saw about 3 or so DMC
images that stopped on that block ID..

Will

In article <6T9D9SO$zHB@peter.soemtron.sb.sub.de>, From peter@soemtron.sb.sub.de (Thomas Havemeister), the following was written: > I'm very interessted, how the other atari enthusiasts are using there >
> atari computer.> .

Up until recently I had two 130's running basic programs I had written or modified acting as character generators. I manage a shopping center, and the ataris were hooked up to large screen tvs. We used them to advertise store specials and upcoming events.

Now that they have been retired, I have offered them to a start-up public access cable channel.

Atari programming is still FUN. I wish I had more time to get back into it.

have you tried cleaning the connections?

I used to own an atari 800 years ago; I sold it to a friend, who later
decided that it was my fault that it wasn't working. I was able to fix
it for him.

In the 800, you can lift the top lid, and get at the ram and rom boards.

Initially, everything was labelled neatly in large cartridges, since the
atari came with 16K stock. The user could add two extra 16k modules to
upgrade to a max of 48k. (the rest of the address space was used by
the system rom, iocbs, screen ram etc.)

open the cartridge door

If you have an earlier 800, there will be two brown tabs that will let
you open the lid. If you have a "newer" model, then you will need a
phillips screwdriver.

you will find something like this

16k ram
16k ram
16k ram
12k? rom (might be 10k--I can't remember.)

my computer had

32k ram board (from upgrade)
16k ram board
system rom board

the rom board is the one nearest the front.

there are special de-oxidizer cleaners that you can buy to clean the contacts on the motherboard and the individual rom/ram boards. Try Radio shack.

what I suggest is that you individually remove the boards and clean the gold contacts on each board and then reseat them firmly.

In the case of my old computer, I cleaned the contacts with a pencil eraser (my friend was impressed) and the computer then worked fine. However, some people think that in the long term, this is bad for the contacts, and opt for the cleaner.

(some people are very cautious . . . perhaps overly so)

All computers, after about 5 years or so suffer this oxidation problem that is the reasoning behind the gold contacts. wiggling the chips and boards is a good idea, but it might not remove enough of the oxidation in order to make a good contact. With the new tin contacts on the new PC's (save costs) I imagine this is going to be a more frequent and prevalent problem in a few years.

I hope this helps some.

Let me know if you can get it to work.

with the 800xl, I am not sure what to do. Everything was built in on the same board, in order to bypass the expense (and space) of the 800.

I used to own one of these as well (I worked at a computer store in the 80's) but I never had to fix it. Sorry.

Stuart Simpson

No, but there was a custom cable designed for use with Darek Mihocka's
8-bit emulator on the ST. I can't remember Darek's e-mail address, but
his company (which markets 8-bit and ST emulators for the Windoze) is
called Branch Always Software (BRA-Soft) and is on the web... perhaps he
still sells these cables?

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current
mailto:mcurrent@carleton.edu

INVEST $5 INTO THOUSANDS IN
WEEKS LEGAL MONEY!!!

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought ''Yeah, right, this must be a scam", like most of us, but I was curious, like most of us, so I kept reading. Anyway it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups.(There are thousands) No catch, that was it!

So after thinking it over and talking to a few people first, I thought about trying it. I figured what have I got to lose except 5 stamps and $5.00, right?

Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161)and they confirmed that it is indeed legal.

Than I invested the measly $5.00.....

Well GUESS WHAT!!!!!! with in 7 days, I started getting money in the mail! I was shocked! I still figured it end soon, and didn't give it another thought. But the money just coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had a mad totaI of over $1,000.00!!!!!! In the third week I had over $10,000 00 and it's still growing! This is now my fourth week and I have made a total of just over $42,000.00 and it's stiIl coming in!
....It's certainly worth $5.00, and 5 stamps, I spent more than that on the lottery!

Let me tell you how this works and most importantly, Why it works...! also. make sure you print a copy of this article NOW! so you can get the information off of it as you need it. The process IS very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST.'' now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes. each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PREFECTLY LEGAL!

Mail the 5 envelopes to the following addresses:

#1 Steven Lease
1212 Alvarado Ave #29
Davis! CA 95616
U.S.A.

#2 Marvin H
2900 Sand Rd #173
Edwardsville Il 62025
U.S.A.

#3 D. Ibrahim
119 E. Latimer ave
Campbell, CA 95008
USA

#4 PauI K.
6475 Boulder Drive
York. SC 29745
USA

#5 Sebastien Demanez
14, rue de Biseau
7130 BINCHE
BELGIUM

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible! Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember the more you post, the more money you make!

Here's HOW you'll receive THE MONEY�:

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter! Now each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, will bring in an additional $125.00! Now those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3.125.00!!! With a original investment of only $5.00! AMAZING. And as I said 5 responses is actualIy VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15 00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. And start posting again. The thing to remember is, do you realize that thousands of people aIl over the world are joining the Internet and reading these articles everyday JUST LIKE YOU are now! ! So can you afford $5.00 and see if it really works? ! ? ! I think so... People have said, "what if the plan is played out and no one sends you the money?! So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? . Estimates are at 20,000 to 50,000 new users, every day with thousands of those joining the actual Internet! Remember play FAIRLY and HONESTLY and this will work. You just have to be honest! Make sure you print this article out RIGHT NOW also! Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!

Here's HOW TO POST in the newsgroups, do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To News" , which is in the top left corner of the newsgroup page. This will bring up a message box

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye! ! !

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter click on "FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU SAVE IT. (so you don't have to type this 200 times :-)

5) Now that you have saved the letter go ahead and send your first copy! (click the "SEND" button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and
click the "TO NEWS' button again! Type in your flashy subject in the "
SUBJECT BOX" , then go to the message and place your cursor here.
Now click on "ATTACHMENT" which is right below the "SUBJECT BOX".
Click on attach file then find your letter wherever you saved it.
Click once on your file then click 'OPEN' then click 'OK'. If you did this
right , you should see your filename in the 'ATTACHMENT BOX' and it will be

shaded.

NOW POST AWAY !�!�!

IF YOU'RE USING INTERNET EXPLORER:
It's just as easy, holding down the left mouse button, highlight this
entire article, then press the 'CTRL' key and "�C�" key at the same time to
copy this article. Then print the article for your records to have the
names of those you will be sending $1.00 to.

NEXT Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy
subject and click the large window below.
Press 'CTRL' and 'V' and the article will appear in the message window.
BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES. Now re-highlight
the article and re-copy it so you have he changes.... then all you have to
do for each newsgroup is 'CTRL' and 'V' and press 'POST' . lt's that easy!
!

THAT'S IT! All you have to do is jump to different newsgroups and post
away, after you get the hang of it . it will take about 30 seconds for each
newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN. THE MORE MONEY YOU
WILL MAKE! ! BUT YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin receiving money from around the world within
day's! You may eventually want to rent a P.O. Box due to the large amount
of mail you receive. If you wish to stay anonymous, you can invent a name
to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

GOOD LUCK to all and please play fairly and reap the huge rewards from
this, which is tons of extra CASH. **By the way, if you try to deceive
people by posting the messages with you name in the list and not sending
the money to the rest of the people already on the list, you will NOT get
as much. Someone I talked to knew someone who did that and he only made
about $150.00, and that's after seven or eight weeks! Then he sent the 5
$1.00 bills, people added him to their lists, and in 4-5 weeks he had over
$10k. This is the fairest and most honest way I have ever seen to share the
wealth of the world with costing anything but our timel�!�! ! .You also
may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again...

It is possible to remap the key layout using ANSI.SYS, but I haven't
done this for a while, so as to how it works I couldn't say. Just type
"HELP ANSI.SYS" at the command prompt to get a listing of how to do
it. (with MS-DOS 6 or greater anyway).
All you really need to do is map the corresponding characters of
F11/F12 into other unused keypresses, maybe on the numeric keypad or
something. Thats up to you to decide.....
Good luck.

You should not use your SIO2PC cable to make PRO images, it requires
a special 'pro' cable. Plans for building the PRO cable are available
at my web site, http://www.nacs.net/~classics.

If your using a MAX232 version of the SIO2PC cable be very careful
with it, I have had many reports of this design going bad and damaging
equiptment. I have no idea why it does, but ive never heard of any
such problems with the 1489 cables.

I don't have a UltraSpeed+ OS so I can't add compatibility for it. E-mail me and I will give you instructions on how to get the APE configuration to ignore ultraspeed.

If your willing to send me a computer w/ the US+ OS to test with for a few days, I will be happy to add supports for it.

Is that one different for the 3 soctor boot loader? I have a few utilitys that will write that to a disk/image.

2698. A new answer to "Can I use my Atari with a VGA monitor"?

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-22 00:00:00 UTC
From: "Lonnie E. McClure" <lmcclure@aristotle.net>
Message-ID: <01bc3715$8c3d4dc0$c252f0c7@chaos>
Source record: 74633

In the past, when someone asked "Can I use my Atari 8-bit with my PC's VGA
monitor?", the answer has taken one of the following forms:
(1) No
(2) It should be possible to create a device to do it
(3) Use a TV card installed in your PC

Well, now there is a fourth answer. For $120, you can buy a device like the

Proview TV box that allows you to use any VGA monitor as a TV, as well as
feed any baseband audio/video signals (such as from a VCR or Atari 8-bit)
into it, without even having to have a PC, much less turn it on.

While $120 may seem a bit steep for a device to connect an Atari 8-bit to a

VGA monitor, keep in mind it also includes a TV tuner with a remote
control, essentially giving you another television.

One source of this device is Tiger Direct. See their web page at
http://www.tigerdirect.com, or if you are ready to order, call
1-800-335-4055,
and ask for item #P129-1000.

NOTE: I am not affiliated with Tiger in any way, and if you tell them I
sent
you, they will no doubt say "Who the heck is he?!" <grin>

>
>Thanks in advance
>
>Darryl Carr

Darryl,
Once the emulator is running, just hit F8 or ALT-F8 and you'll
be taken into the user interface portion of XL-It.. From there, go to
the drives menu, select D1: or whatever. You'll be presented with a
file selection box. Point it to the .ATR or .XFD file that you wish
to run. Click Ok. Now either go to the emulation menu (?) or hit
ALT-E to return to the emulator. Hit F10 to reboot. Your "disk"
should now load if the image is good / compatible / supported / (you
get the picture). Make sure to either start the program with the
command line option -nobasic if you're running a binary game or hold
down [F1] while it loads up.

Hope this answers your question.
-Keith

2700. Re: A New Atari 8bit with slots and detachable keyboard!!!

Newsgroup: comp.sys.atari.8bit

Personally I think the problem with this new computer is that it offers no significant advantage over existing models. Hardware isn't the issue, it's software. And that's why the 8-bit is dead. Everyone's just playing games on it and nothing more, and banked RAM is used as nothing but a RAMDISK. If you are going to go to the bother of redesining the 8-bit, you might as well try to go with a 65816-based design and try to break the 1.79mhz barrier, and hack a PBI-based VGA card on it and update the OS. Otherwise I don't see the real logic in it.

Others have considered the 65816 upgrade path, most recently FTE, and I don't think anything really came of it due to the software-gap.

I have just tried a program called ATARIDSK, which is very similar to
MYUTIL, but has a user interface to make life easier. It *does*
actually seem to work fine on a PC 5.25 1.2mb disk drive, double
density only I'm afraid tho. It gives you a directory listing of an
Atari disk, and the ability to copy/delete/format/whatever. A great
program to say the least, but I cannot find the URL where I downloaded
it from. So, if anyone wants it I can email it to you, or if anyone
has the URL for it please reply. I did a Lycos search and got 3 URL's,
but none were the correct file (Umich archive I think).
BTW, I tested it by fomatting a disk in the PC's 5.25, writing a few
files to the disk, and then reading it on 2 1050 disk drives AND a
RANA systems disk drive too, without any bad sector reads at all.
With MYUTIL, I regularly got bad sectors whether the disk was
formatted on the PC or the Atari, so this seems to have gotten around
these problems. I don't know much about INDUS drives, do they support
double density? You should be ok if they do..... :)

There is no single Atari 8-bit computer that is perfect in all areas in its stock configuration.

The Atari 130XE may have the chroma and luma lines on the monitor port, and banked RAM standard, but the keyboard sucks rocks and XE Touch doesn't help much. So maybe it's the best compromise for a stock machine...

But the best machine for upgrading is probably the 1200XL because once you are done heavily modifying it for the stock OS, banked RAM, PBI, and fixing the video, you have a computer with tons of expansion space inside and the best keyboard of the XL/XE line. (even the 800XL keyboard doesn't hold a candle to the ultra smooth and slick feel of those MITSUMI keys on the 1200XL...)

Rare? Really? Various Compute! books show up here FS regularly--including
that one. I'd be surprised if it was really rare--at least relative to
other Atari 8-bit books...

2709. 800XL keyboard problem

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-22 00:00:00 UTC
From: Ronald T Kneusel <rkneusel@post.its.mcw.edu>
Message-ID: <Pine.ULT.3.90.970322222657.19124A-100000@post.its.mcw.edu>
Source record: 74644

I'm working on restoring a dead 800XL (which I have working now thanks to the ROMs from another dead 800XL)

But, the keyboard is messed up a bit. The "=" is on constantly. I've taken the entire keyboard apart and can see that the contacts on the plastic under the keys looks to be burned which must be what is keeping the key on all the time, even with the good keyboard from the other 800XL.

I'm not sure how these keyboards work since the coating on the "contacts" does not conduct. So, here is my question:

What should I do/use to keep this key from shorting out and to get it working again? Has anyone run into this before?

- Ron Kneusel

: achieve 19.2.

The BB has hardware flow control, which is a must-have for high speed communication. ^S and ^Q software flow control is nearly extinct these days and with modem compression, there is significant delays in when these keys are recognized on the BBSs that still support them.

From: Will Fisher <blackat@direct.ca>
Message-ID: <01bc3656$61618680$b9f7aecc@127.0.0.1>
Source record: 74713

Attached is my DIMS'96 utility program. This does require the Microsoft visual basic runtime libraries (version 4) to be installed on your system (in the /windows/system dir).

If you like the program let me know... I may add support and make a newer version. I was thinking of making the disk editing integrated right into Explorer itself. Disk images would look like file folders (with a disk icon on them). Double click it like any other folder and drag files in/out just like regular folders...

Is this a good idea? Let me know!

Will Fisher

BTW: this program was posted to alt.binaries.atari as well... =)

Oops... i forgot one suggestion:

Please, please, please fix the long filename problems
with your Virtual HDD's and XL-it...

I use long filenames for my archives as it makes my
life ALOT easier!

A suggestion:

When the virtual HDD routine detects a ~ in the filename
(a character not available on the 8-bit) simply convert
it to a _ or something. Then if the user types a filename
with a _ in it that returns a file not found error simply
replace the _ with a ~ and try again.

Thanks for a wonderful emulator, I hope my suggestions are
of some use to you!

When Bruce bought out the remaining boxes of Atari eproms he was given consent from Atari that anything he found within those boxes he owned, therefor he has every right to burn copies, he's not doing it illegally, he was given permission, therefor he's not doing anything wrong, itself of complaining you should be happy to have some fresh new games to play on the 8-bits.

I have the following items for sale:

Winner joypad - originally for IBM-PC, modified for use with
Atari 8-bit. It would probably also work with a 2600, but I know
it doesn't work with a 7800. It works with any game. I built
this myself. $10

Print Shop Companion - with box, manual and reference card. $10

Your Personal Net Worth - 3 disks, manual and plastic box. $5

Atari 800XL Owner's Guide. $4

Zenith ZVM1212 monochrome composite monitor. $15

Audiotronics monochrome composite monitor. $11

Hayes Smartmodem 1200 with power supply. Not tested. $5

Multitech Multimodem 212E, 1200 bps. $10

Prices do not include shipping unless otherwise noted. Shipping is from
Dayton, Ohio. I am not in Canada. Please reply to bx557@torfree.net

>
AT&K4 is the command that sets the modem for XON/XOFF flow control instead
of hardware flow control like the PC's use. I think the Black Box does
hardware flow control, but most other 8-bit serial interfaces don't.

Source record: 74720
Cross-posted to: comp.emulators.misc,comp.sys.atari.8bit

Markus you are a genuis!!!

The Edilon and Koronis Rift now work on your emulator!
I was amazed to see The Edilon boot up and work great
WITH sound on your emu... i think yours is the 1st emu
that these games work on!

Keep up the good work... I live in Canada... how could
I get a donation your way and what is the average
donation you get? I would love to contribute to your
project and help out! Have you thought of porting
XLit to the LINUX platform? I know it has optimized
assembly language for the 386/486/Pentuim in it but
LINUX is a PC O/S...

Anyways, great job!

A few suggestions: The user interface on 0.19 is
slightly broken... the options under Environment
don't get loaded back in correctly...
Artifacting looks promising.. how about a hotkey
to toggle it off and on while running the emulator?
GR.0 looks horrible with artifacting on...
Perhaps a screen mask would be a good idea... if only
an odd pixel is on make both pixels blue/red, and vice
versa for even?
Also I think you should add an option to let us choose
what colours get artifacted... since on MY old tv it was
brownish/purpleish... and for others it could be red/green
or something... this way we could recreate what we
saw on our old TV's...

Sorry to drivel on like this, i've been using XL-It since
ver 0.15 or so and LOVE it... i've finally decided to let
you know know some of my ideas!

>
>Thanks very much in advance for your knowledge!

You'll have to find a way to port the files over to an Atari disk,
either using a program called MYUTIL or ATARIDSK, or a null modem
cable and term programs on the PC and Atari.
Both MYUTIL and ATARIDSK will read and write Atari DOUBLE DENSITY
disks on a PC's 5.25 disk drive. Of course your 1050 will have to be
capable of Double Density to read these disks. ATARIDSK seems the
better choice, I haven't had too many probs with any disks it creates.
Then, you will need a program on the Atari to convert the ATR/XFD
back into a real disk. I have written a program called IMG2DISK, in
BASIC, which will do just that. I still have a lot of work to do on
the program, but it will successfully convert ATR/XFD files working
under most DOS's. I have been informed that it fails under SpartaDOS X
(the cart), but I haven't got "X" so am unable to assert the problem.
Anyway, let me know if you would like to try out IMG2DISK, and how you
would like it sent (ZIP, ARC whatever).

2724. Uploaded: Atari800-0.6.2.tar.gz (Unix/Amiga/DOS)

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-23 00:00:00 UTC
From: "David J. Firth" <david@signus.demon.co.uk>
Message-ID: <7AYZEQAIzUNzEw7m@signus.demon.co.uk>
Source record: 74573
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

I've just uploaded the latest version of the Atari800 Emulator to my
web site:-

http://www.signus.demon.co.uk/david/index.html

The emulator comes as source code for all versions or as an MS-DOS
binary. Sorry but I haven't got round to producing a new Amiga binary
yet!

Changes in 0.6.2
---

o Antic Modes 2, 3 and f now display the normal Atari Colour and
Luminance by default. Extended Antic Modes 2, 3 and f are enabled
by starting the emulator with the "-xcolpf1" command line option.
This allows two completely different colours to be displayed in
these modes - as previously.

o Improved Run-Time Configuration. Starting emulator with the
"-configure" command line option allows configuration of several
items:-

1. Location of OS Roms
2. Default Directory for Disk Images
3. Default Directory for ROM Images
4. Default Directory for H1, H2, H3 and H4 pseudo devices
5. Command Print File (for Printer Support)
6. Default Screen Refresh Ratio
7. Default Startup System (OS/A, OS/B, XL, XE, 5200)
8. Default TV Mode (PAL, NTSC)
9. Hold Option during Coldstart
10. Enable C000-CFFF RAM in Atari 800 mode
11. Enable SIO Patch
12. Enable FFP Patch
13. Enable Extended COLPF1 (Two true colours in Antic Modes 2, 3 &
F)

The emulator writes a file called "atari800.cfg" in your default
directory. When reading the configuration the emulator first checks
to see if you've specified a configuration on the command line with
the "-config" option otherwise it first tries to read a configuration
file from your default directory, failing this it then tries to read
a configuration file from "/etc/atari800.cfg".

o JoyMouse for Toshiba Portables running SVGALIB - Probably also
suitable for Trackball devices with minor modifications.

This was such a great game. It was really hard and I don't see how
Yogi beat it in 18:18 as it was time-consuming for me. I caught the
balloon but don't remember how. Thought you just waited at the ledge
for it or something.

I think I beat the game like once. This is a game that can't really be
played on an emulator, because it required the split-second timing.

The MIO does have the hardware capability for hardware flow control. All the lines are connected and useable. Perhaps their R: driver (ICDs) doesn't make use of it (which is distinctly possible). I've been going over my MIO manual and it seems that as wonderful as the MIO was, there was a lot of untapped potential.

I'm hoping to disassemble their ROM and look at burning my own... With such things as an improved menu, better R: handler, etc.

His company is now called Emulators Inc. I wonder if Darek works for
MS, he is in the same neighborhood.

You shall stand on the ledge, and the balloon goes back and forth quite
frequently. I know a bug in an old copy that will not show the balloons!
Try buying the cartridge if possible!!!

Can anyone tell me if it is possible to copy cartridge on disk and then convert it to run in xformer emulator or some other emulator, and how it is done.

Any help would be appreciated. I have this Atari cartridge that i like a lot and would like to try and run it on my pentium machine.

Thanks!!!

There is a demo on how to use this controller in the _original_ Atari BASIC reference manual <The one that came with the BASIC cart when it first came out>.. Somebody here should have that manual, and since the program is only 20-30 lines long, should be no problem getting them to type it in & mail it to you.. Yes, I would be willing to do this, but I no longer have this book <or if I do it's going to be impossible to find.. I'm kind of a pack-rat>..

David G. Dahlstrom wrote:
>
> Possibly true...but a keyboard without keys is a real problem.
>
> Dave
>

Very few programs use the F11 & F12 keys.. one that does is Xformer..
Another is Doom <to control gamma-correction>... Otherwise this is the
best keyboard made <practically indestructible, like an Atari 800>...
Isn't there some small patch somewhere that allows the use of Shift-F1 &
Shift-F2 to act as these keys <Worked in the old IBM BASICA>

I know this isn't directly related to the Atari 8-bit, but indirectly it
is, since it is a problem with Xformer.. Anybody?

2744. Re: Atari monitor cable?

Source record: 74593

John Clausen wrote:
>
> Can anyone post the pin out for the Atari 800's monitor port?
>
> Thanks
> John

Yes. This is directly from Mapping the Atari, Revised Edition, Appendix
15:

3 1

5 4
2

1 - Composite Luminance
2 - Ground
3 - Audio Output
4 - Composite video
5 - Composite Chroma

(Looking at the back of the computer itself; the pins are arranged in a
semicircular pattern. I have no idea why they aren't numbered in
clockwise order, but this information IS correct, I have built several
cables that work.)

..an interesting modification is to short either the Chroma or Luma
lines to the Composite Video line. You will get either better color
depth <chroma> or sharper contrast and picture definition <luma>. The
Luma mod works especially well if you are trying to see 80 columns on a
TV <these mods affect the picture even if you are using a TV and RF
box!! Just get a connector to fit the jack & short the necessary pins
together.>

enjoy

There are a lot of us here in the US and in Europe that are doing just
that keeping the 8bit "Alive" and where doing a gret job to. The 8bit is
a fine system, and one that I have gotten my moneys worth over the years.
Unlike the clone box, you just keep throwing money out the window with all
this upgrade shit.
and it looks like its never going to stop. Well maybe I should say the
bucks STOP here "Pentium 75" 16megs edo ram - 64bit 2 meg MPEG video card.

I think B&C is doing the best thing in doing a run on those NEW 8bit
games, it gives us all a chance to buy them at a fare price, He Hell
with all those clolectors trying to grab a "Prototype" cart just to sell
it to some poor soul for a 100 bucks or more. There the creeps.

8bits Rool dude, The hell with the Clone Shit and save a bundle!

I'm using a 1489, but it still makes me nervous - especially after using it for a while today, my 130XE (with all the mods) started acting very strangely, on two different occasions. Shutting it off and turning it back on didn't work - it was showing bogus filespecs, crashing, and had some flickery-screen errors - this was directly after running a game and rebooting, so it may have something to do with a bad game, and it just takes the computer a few minutes to recover? Sounds unlikely, but I'd switch to the 800XL I have, that'd work fine, then back to the 130 and it'd work perfectly again. It's odd, because I've had it going for a long stretches of time without hiccuping... I wonder if it's the memory, as I know that at least one or two chips have gone bad (it's a 320K machine.)

>I don't have a UltraSpeed+ OS so I can't add compatibility for it. E-mail

Will do, thanks.

>If your willing to send me a computer w/ the US+ OS to test with for
> a few days, I will be happy to add supports for it.

Well, switching the smart/stupid toggle appears to be the only issue now, and I'm kind of superprotective about it - I fear that if something happens to it, I wouldn't be able to find another.

Yeah, I used to have several, but I liked Fenders the best - though it may be a moot point, since I tried "menu.atr", Yogi's menuing program that can handle the megaimages (though it appears to only look at d2:,

not sure if it can look at anything higher.)

Additonal Note: The machine will power up with 16k only installed.
Try each 16k module in the socket behind the first one, the 10K module
slot. This will indicate whether one of the 16k modules is preventing
operation. - Ralph

Think you summed it up pretty well. Bob Wooley surely will appreciate your support of his favorite computer..

The other XL's and XE's built after the 1200XL was produced show definate signs of cost reduction on Atari's part. Not built with the same quality materials.

2762. Re: bincancel:17 large binaries:AR997:@@NCM

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-23 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-997.a@redpoll.mrfs.oh.us>
Source record: 74663
Cross-posted to: alt.retromod,comp.lang.pascal.delphi.misc,comp.music.midi,comp.sys.atari.8bit,news.newusers.questions,rec.autos.simulators,rec.crafts.marketplace,rec.games.video.nintendo,rec.outdoors.fishing,rec.outdoors.fishing.bass,rec.outdoors.fishing.saltwater,rec.radio.scanner,rec.scuba,rec.sport.snowmobiles,soc.culture.korean,soc.culture.sri-lanka

Large binary posts do not belong in unmoderated discussion groups.

Please read this entire message, the Bincancel FAQ, and the complete
report (see below) before following up to or responding to this article.

As a service to, and with the cooperation of, other news administrators,
I run a program that searches for, and issues advisory cancels for,
large binaries in the akr, biz, comp, humanities, misc, news, nz, rec,
sci, soc, and talk hierarchies.

I have issued 17 cancels for large binary files (average size 233,284
characters - total size 3,965,836 characters) posted to 15 different
unmoderated discussion groups in the comp, news, rec, and soc
hierarchies as follows:
2 rec.sport.snowmobiles
2 news.newusers.questions
1 soc.culture.sri-lanka
1 soc.culture.korean
1 rec.scuba
1 rec.radio.scanner
1 rec.outdoors.fishing.saltwater
1 rec.outdoors.fishing.bass
1 rec.outdoors.fishing
1 rec.games.video.nintendo
1 rec.crafts.marketplace
1 rec.autos.simulators
1 comp.sys.atari.8bit
1 comp.music.midi
1 comp.lang.pascal.delphi.misc

This pointer is being posted to each affected group listed above.
Follow-ups are directed to news.admin.net-abuse.usenet.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.bulletins. The
full report can also be found in news.lists.filters and alt.retromod.
Look for AR997 in the subject, or, if your reader supports it,
use <URL:news:ARMM-Report-997@redpoll.mrfs.oh.us>.

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated groups in the akr, biz, comp, humanities,
misc, news, rec, nz, sci, soc, and talk hierarchies
(except for comp.binaries.apple2, comp.bugs.2bsd, and

rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

For more information about binary cancels, see the bincancel FAQ,
<URL:http://www.southcom.com.au/~geniac/binfaq.txt>.

Please direct public feedback to news.admin.net-abuse.usenet and private
feedback to red@redpoll.mrfs.oh.us. In the interests of preventing
cross-posted flame wars, please honor the followup-to header and do
not cross-post your reply to multiple groups. Thank you for your
cooperation.

Best wishes,
Dick

How can you love your 8bit when you dont know athing about it?
You have it sitting next to a mac? YUK! Want to hear real good sounds
on 8bit Atari then load up some *.mpt files and enjoy. MD8 are ok, but
not the best the 8bit can do.

2768. XLIT .19 and GPRIOR-"bug"

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-23 00:00:00 UTC
From: "M. Diepenhorst" <madie@worldonline.nl>
Message-ID: <01bc378c$6132ce80$239c099a@amulder>
Source record: 74669

Someone already noticed that there is some strange going on with some players. I've not discovered on which players things are going wrong, but some players are displayed at the background of the playfield on my real ATARI and they are displayed in FRONT of the playfield on the XLIT...

Some player # are doing OK and some don't.

This is the GPRIOR-label on 623 (=$026F)

Some strange things are going on if the missiles are used as a 5th player... and either if there is a "illegal" way of programming soft-sprites either.

I try to find some time to write a programm that shows all these "bugs" and I'll send it to Markus.

But one thing must be yelled!!! XLIT IS THE GREATEST ATARI 8BIT EMULATOR EVER MADE!!!!!!!!

I must say most of the games I play are giving me the same kick if I play them with XLIT. Yeah MARKUS: keep doing the good work, and I think your XLIT is much much much more capable making an 8bit of the PC than XFORMER does. Especially your SOUND emulation sounds GREAT.

Some ideas perhaps for further versions: try to emulate some tricky sio access (demos like Cool Emotion, JoyRide but also the bootmenu of ULTRA-Copy disk on Double Density disks isn't booting properly); then I got some timingsproblems on the emulation. If the ATARI-programm takes a lot of cpu-cycles the emulator slows down the whole emulation task :-(.... locking on 50Hz is not always the right way to fix it. Perhaps is my pentium 90 to slow for emulation everything ok, but this is the only point Xformer is doing a better job (the emulation of the timing of the 8bit seems very stable to me.... but perhaps is that because the sound emulating of that emulator is done in a very simple way (stupid way btw). Last idea is perhaps to build in some modem support... Xformer (shareware version) is doing it at 300 baud. HAHAHA at least I like a 19200 support bwahahahahahaha. But ok... you are the author, and you must do what YOU think is right.

THANX for writing this great emulator! I watch out for new versions!

Marius Diepenhorst

Making a pc board that would fit into a standard PC case would be killer, you
could even use the pc power supply and have +/- 5/12 volts available, w/
power for all those peripherals on hand already.

Now setting all those jumpers to make the case display say 1.79 will be
the only hard part :)

2772. FS: Atari Computer Goods! Some Listed! FREE Catalogs!

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-24 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5h72gh$lt8@nr1.calgary.istar.net>
Source record: 74524
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, MonoChrome Monitors, Monitor Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, MonoChrome Monitors, Monitor Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials.

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. I use to have the software cartridge copier that would copy 8k or 16k ROM cartridges. It only worked for a few of them, and it wouldn't work on 64k ROMs (like the bank select ones or XE game carts) I think it was in a program called the Pirate's Treasure Chet.

I think there was also a hardware gadget called the Super Pill that allowed you to copy ALL carts, but I don't know anyone that has it.

Yeah, ask if ANYONE has ever completed Star Raiders and received the
HIGHEST ranking on the hardest level. My best I think was lietenant on
the medium difficulty.

XL-it v.019 works with the large ATRs as far as I know. I remember trying some
anyway. NOTE: The ones at ftp.hackerz.com do not have boot-loaders on them!
You'll get a 'BOOT ERROR!!!!!'

There is just one thing I can say to you:

JUST FORGET ABOUT XFORMER (3.6 and on)

Sorry for you, but this emulator seems rather worthless to me!!

XLIT 0.19 is much much much much MUCH more better!! Just give it a try, and I know, that when you have found your right configuration settings, you'll love it!

Here at home my whole room is filled with real atari 8bit computers, but that's not enough for me. NO the PC is emulating ATARI 8bit comps, and ofcourse with XLIT. Even games are emulated that well, you will get the same kick. You don't just play with XLIT, you feel it <g>

There was a message here in the newsgroup from someone who had
10,000+ surplus Atari chips for sale at $1.75 each. A run of 100 or
so would not seem to be a problem. Let me know if you need more info
-- I have the message printed out.

No that isn't the point, but sometimes you can better forget something, to
get out of "trouble." XFORMER is already disqualified in the rice between
XFORMER and XLIT. It is impossible to win for XFORMER anymore.

that
->at one point you're supposed to wait at the edge of a cliff for a
->balloon to come by and pick you up, but it never comes........are
you
->supposed to like do something special to get the balloon to come?
-
-This was such a great game. It was really hard and I don't see how
-Yogi beat it in 18:18 as it was time-consuming for me. I caught the
-balloon but don't remember how. Thought you just waited at the ledge
-for it or something.
-
-I think I beat the game like once. This is a game that can't really
be
-played on an emulator, because it required the split-second timing.
-
-Dave Navajo
-
You go to the edge of the cliff and jump straight up. After the bat
leaves the screen, the balloon comes out. If the balloon graphics are
corrupted, you have the uncracked copy and need to d/l a new one. Grab
the balloon all the way to the top.

I got 18:18 because I used to listen to Tangerine Dream "force
majeure" track 1 is 18:18, it wasnt easy. BTW, you can finish in on an
emulator because I have on xl it.

I say if you're serious about building this at a reasonable price,
don't even worry about style. You might even consider selling a PC
board without case, like the Black Box.

Well, since you asked...

Under "Author" you should have more on Doug than you have here. ANALOG printed an interview with Mr. Neubar (is that spelled right?), in 1986 (Sept. or Oct. issue) and you might want to get soem data from it.

Under "Features" you didn't mention that the explosions are in true 3D (hence the reason the game slows down when something blows up).

I have fifty-two 256K DIP Chips that I would like to sell. I know these chips are usable to modify existing Atari 130 XE's to 320K or 512K upgrades. If you are interested, please make me an offer for the whole lot or it can be broken down to smaller amounts, as requested. Best Offer + shipping takes the lot or make an offer (+ Shipping) for smaller amounts desired.

Bob,

You were screwed, and so were Atari owners.

As you discovered you had to have a "Storefront" and carry Atari products to be an authorized service center. Unfortunatly computer and video game stores are usually not run by people who fix things, so what you get is shoddy, overpriced unproffessional service. You can thank the folks in sales and marketing for this at Atari.

For the record, you may not remember me......but I tried hard to get you authorized in Salt Lake City. You had a very good reputation at Atari. Do you feel any better now........

jj

BTW: Here we are 15 years latter and nothing has changed!

If you own a new game console you do not have the same repair and service options as if you were a computer, TV, or VCR owner. Try to get parts or service information on any new console.

Opinions expressed are my own, and do not reflect my employers.

Great Atari stuff!!! Old member of S.P.A.C.E.(Saint Paul Atari
Enthusiasts) is selling all of our Atari stuff. I am posting this for my
dad. We have over one hundred games, commercial, and programmed by other
SPACE members. There are 2 800XL units we're selling, one with 256k
memory, and one 130XE, and also
4 1050 drives
2 850 interfaces
1 1010 printer
1 2400 modem
2 color monitors
2 1020 color plotters
1 daisy wheel printer
1 Epson printer
2 tape drives
4 joysticks
2 trackballs
2 paddle
Books
Magazines,
DOS 1.0-3.0
Mucho business
game(Frogger, Ultima 8, Lode Runner, etc.)
graphic
SPACE DOM's disks and cartridges.

This is just a quick posting, and we have much more not listed. Asking
$500/BO for all Atari stuff you'll ever need. Period. E-mail at
bcostell@isd.net

2798. Yar's Revenge + E.T.

In the instruction manual for Yars it says that if you do your vicory
dance when the evil head is blowing up that the ghost of yar can be
seen or somesuch stuff like that... has anyone ever
see this "ghost" Or seen Yar show up in ET? He flew out of the hole
when I fixed the flower
once.... instead of the flower growing...
I like Yar. It is fun

I don't know if i'm doing this correctly.... having never responded to an online auction before. (For that matter i've never responded to a posting before...) Anyway, here goes:

I can be reached at: dlsch@earthlink.net

I bid $20.00 for:
---
130 XE - tested w/ power supply, set of paddles (untested), video touch pad w/Star Raiders overlay, two 2600 joysticks (untested), owners manual,
T.V. cord, and the following loose cartridges: Defender, and Atariwriter

I bid $2.00 for:

Oss

Mac/65 (U)
Basic XE (U) ------------
Roklan

Did I do this correctly? If so, do you let each bidder know the outcome? Please let me know...
Thanks.

Ron,

Does the "=" key come up with the keyboard removed? If so the Pokey or
the two 4052 key decoders are bad.

If the keyboard is really bad, you could probably clean the mylar and
or fix the traces with some conductive paint used to fix rear
windsheild defogger elements.

Buying a new keyboard from Best as suggested by others would not be a
bad idea.

-

Not yet. When I get time I'm going to go back into it and let you
change the drive. I didn't write it originally, I just hacked it to
look at D2: and goto another screen. A very poor method actually, all
it does is add 3 to the directory sector number until it reaches $170
then it resets. Hence the garbage occuring sometimes on the 3rd set of
filenames.
Maybe time for a complete rewrite and assembly.

: I bought Xformer 3.0a for $35 more than a year ago. I got the 3.3
: upgrade from the website by using my password several months ago. Took
: a while but I finally was able to get it.

: I emailed Darek Mihocka to ask for the latest update Xformer for
: Win95. I provided my password and name and all that. 2 weeks later he
: emails me back saying "no."

: I guess he wants to be mailed the original 3.0a disk but he didn't
: really say.

Has anybody received Xformer96 for Win95? I mailed my origional disk
to him with a self addressed stamped envelope back in October. I'm still
waiting for the Win95 release. The last I heard so was everyone else.
It doesn't really make any difference now as Xl-it actually does what
Xformer claims to be able to do. Xl-it runs most of my atari software,
while Xformer failed on most. The Win95 release of Xformer will need
to be a very major improvement over 3.0 and 3.6 to be worth putting onto
the hard disk.

Curt,

You must have some incomplete info on the "hack" because you are never going to get RGB out of an 800 with only 2 transistors. You need an RGB decoder chip to take the composite lum and chroma......and get RGB out.

Here is why the original 800 never had RGB:

1: The GTIA was designed to output composite only. It would have needed to be redesigned or have the above circuit. In 1978 the major design year, these types of components (RGB decoders) were not very cheap.

2: RGB monitors were almost unheard of in 1978. RGB outputs in latter models (130xe) would have made more logic as CGA/EGA was pretty popular at that time.

If you pick up a Motorola linear data book, you can find some IC's with example circuits that should work fine on an 800.

Big _ATR_ images work fine (tested with Yogi's excellent collection).
XFD images with non-standard sizes will probably fail.
I don't plan to deal much with XFD anymore. That format is "stupid"
(there is no header with info on it; you can only guess if it's
256Bytes sectored or 128Bytes sectored etc.).

Bye,
Markus

I don't know, maybe by using the directory function that you had
already previously loaded in. Obviously the question to reboot
depends on what you need to do with the new virtual disk that was
inserted.

This game is absofraggin-lutely fantastic! You drive this little helicopter around (wheee!!) and drop explosive bombs on the ground and blast out the dirt. you have to blast enough to drill down and through to get the sacks of money. then you fly down and pick 'em up. There's this great big red airplane that keeps flying overhead and fills your finely bombarded trenches. A real pain in the ass! And you gotta watch out for the lakes, if you bomb too close, they flood the whole area. And that puts a stop on all the fun, unless you can buy your way out. Just wait till you get sealed in a cavern of your own making, you'll be hangin on the edge of your seat swinging that joystick around! I caught myself holding the joystick practically upside down. Jamming those buttons harder in hopes you can move the chopper just a tadbit faster. Ohhhhh..!! Ooof! whew.. wipe that sweat up. The exploding noise just doesn't stop! Incredible original 8-bit action i'm tellin' ya. Almost as good as star raiders, well that's a whole different style anyways. When I (like a damned stupid F***) trashed my atari-800 14 years ago I thought I'd never ever EVER see these games again. I wonder if an ultimate price is somehow attached to all this uncontrolled orgasmic fun? Inviting comments from everyone!

Keatah

Better watch out for flammable material! ;) ^^^^^^^^^

I put 800XLs in metal cases and turned them into industrial computers!
They control a stepper motor via the joystick port through an amplifier,
and also take digital feedback. I wrote the control program in assembly
and burned it onto homemade cartridges. The precise timing and high
rate
needed for turning the stepper smoothly took some serious IRQ tweeking,
and the VBI had to be minimized as well. The envelope was PUSHED!

They're installed mostly on surface grinders and cylindrical grinders,
which are not as sophisticated as multi-axis CNCs, but hey, I'm still
very proud of what an Atari can do. If you visit a machine shop and
spot
what looks like a GRAPHICS 2 screen on a piece of equipment, it may be
exactly what you think it is. :)

I think that standardizing image files is an excellent idea. It
shouldn't be
too dificult either - the basic atr 16 byte header has bytes to spare
and as
far as I know even copy protected disks had to have standard first three
sectors
as single density - just add a flag in the header to indicate that the
rest of
the image is is a protected disk and the rest is software implementation
of the
standard.

Atari Games for Sale

(All complete with boxes and documentation, unless otherwise noted)

Cassette Tapes
~~~~~~~~ ~~~~~
**AIM Software

t X-Ray Art construction game

**Atari Corp

t States and Capitals Program cassette ONLY, Instructions and
game on tape.

**Cosmi

t Aztec Challenge Seems to be "Mountain King" type game.

t Caverns of Khafka typical cavern-tomb danger graphics
game

t The Crypts of Plumbous A lot like "Defender", as I recall.

t Forbidden Forest Find your way out of a deadly graphic
forest

t Galactic Avenger "Space Invaders" type game

t Professor IQ Series of educational learning games

t Slinky You've played with the springs, now try
them on the screen!!

t Spider Invasion Destroy deadly spider mutations, their
eggs and nest. Are you getting as
itchy as I am?

**Edu-ware Services

t Compu-read 3.0 Tool for improving reading speed and
comprehension. NOT boxed, but in it's
own folder including docs.
~~~~~~~~

**EPYX

t Curse of Ra Expansion module for "Temple of Apshai"
adventure game. Book of Lore missing.

**Program Design, Inc.

t Addition with Carrying Math games for the young. In clear
plastic sleeve.

t Sam the Sea Serpent Sammy will devour your child if she
gives the wrong answer! (Just Kidding
!!). A story and game for your young
ones.

**Thorn EMI -- love their packaging....beta-like plastic containers
(and we all know where beta is)

t Compute 4 & Reversi Connect-4 game and "Go" type game

t Cribbage & Dominoes Cribbage & Dominoes...get the idea?

t Darts So safe, you can even throw them at
your Mother-in-Law

t European Scene Jigsaw like those plastic toys where you
Puzzles Vol2 slide the tiles to get the picture
together.

t Figure Fun Two games to teach multiplication,
division, etc. Five levels, cover most
ages

t Owari & Bull and Cow Computer renditions of traditional folk
games

t Pool Everybody in the Pool !! No, not that
kind -- tournament and eight-ball,
practice included.

t Snooker & Billiards Pool with fewer balls and no numbers.

t Super Cubes and Slip Rubik's Cube and marble maze in
computer form.

5-1/4" diskettes
~~~~~~ ~~~~~~~~~
**Activision

d Master of the Lamps Riddles of music memory and color,
album type packaging

**ALA

d Dragon's Hideaway Gather the Dragon's eggs...make a
medieval omelet??
~~~~~~

**Atari

d Caverns of Mars Primitive Zaxxon in a Martian cave

**Atari Program Exchange

d Galahad and the Holy Grail Fairly well known adventure game, in
ziplock packaging.

d Seven Card Stud Monty Webb's poker game. Ziplock
packaging.

**Avalon Hill

d Divex Another darned "teach your kid" number
stuff... don't YOU ever sit down with
them??

**CBS Software

d Success With Math: Math for grade levels 5-8
Fractions

d Success with Math: Grade levels 7-11
Linear Equations

d Success with Math: Grade levels 9-12
Quadratic Equations

**CodeWriter (I found these VERY difficult to play because their
documents are too sketchy)

d Casebook of Hemlock Find out who murdered Lady Penelope
Soames #3 Wellington. Text adventure.

d Star Voyage 1/2 Electronic text adventure

d Star Voyage 3/4 If you haven't punished yourself
enough, finish the stupid thing.

**Cosmi

d The E Factor Save your planet against mimes, aliens
and asteroids!! Sorry, Marcel, oops,
that's "Mines"

**Crystalware

d Imperial Walker Idiotic robot elephant from Star Wars

**DataMost

d Ardy Anteater slurping up those ants !

d Night Raiders Blow up the alien spaceships
again...don't they ever give up?

d The Tail of Beta Lyrae Lyrae is blow up the spaceships you
& Round About missed before, Round About .. blow up
strange shapes. Two games in one
ziplock.

**Datasoft

d The Sands of Egypt Graphic adventure ... still getting it
out of my boots.

**EPYX

d Crypt of the Undead Fight the beasties, get out of the
cemetery before you become a permanent
resident.

d King Arthur's Heir Camelot adventure game.

d Morloc's Tower Kill the monsters, Morloc and steal his
wealth

d The Nightmare Elude the dangers and wake up or spend
eternity in Hell.

d Temple of Apshai Base for other DUNJONQUEST games.
Includes both cassette version and
5 1/4" disk.

d Upper Reaches of Apshai Another expansion module for Temple of
Apshai. Book of Lore missing.

**Hayden Software

d Final Conflict Futuristic tank warfare game

**Infocom

d The Four-in-one Infocom Sampler (DEMOS)
If this needs description, go back to
APX, do not collect $200. Diskette in
sleeve ONLY.

**K-TEK

d Gorgon Rescue the Golden Fleece with Jason,
beware Medusa, beware this game... it's
Booorrrrriiiinnnggggg.

**KeyPunch Software

d Strategy Simulations Robot Patrol, Star Merchant, Civil War,
Convoy. Sure sounds like public domain
games to me ! In plastic sleeve.

**Learning Company

d Word Spinner Basic building blocks of reading, ages
6 - 10. In cardboard folder.

**Main Street Publishing

d Ardy the Aardvark Same game as above, repackaged in
ziplock.

**Penguin Software

d The Quest Fairly decent graphic adventure game

**Scholastic

d Agent USA Educational puzzle solving adventure
for ages 9 to adult. Nice, but heavy
packaging.

d Turtle Tracks LOGO-type graphics language program
for ages 9 to adults. Also nicely but
heavily packaged.

**Sierra Online

d Dark Crystal Roberta Williams' four disk graphics
adventure based on movie of the same
name.

**Sirius

d Blade of Blackpool Illustrated myth and magic graphics
adventure game.

d Fast Eddie Jumpman, Donkey Kong type arcade game.

d Wayout Colorful elaborate maze game. Still
has the CLOWN glasses !!

**Spinnaker (Heavy plastic box packaging...nice, but probably
expensive to mail !)

d Kinder Comp Collection of six educational games.
Boy, are your kids going to be smart !!

d Snooper Troops, Case #1 Kids detective game. Teaches problem
solving skills

d Snooper Troops, Case #2 Are your kids skilled yet? If not, try
this one.

**Thorn EMI

d Home Financial Management If you buy all the above, this will
help tell you how much over budget you
are!!

**Walt Disney PC Software

d Mickey and the Great Outdoors If your kid can only learn from a
mouse, this is the one to do it.
More math and literacy skills.

Cartridges

**Atari

c Centipede Zap the worm and all his parts. Arcade
game.

c E.T. Phone Home Help the E.T. find the parts to make
his phone.

c Missile Command Save your cities from alien attack.

c Star Raiders Some more stupid spaceships!

**Broderbund

c Seafox Submarine warfare arcade game.

**CBS Software

c Mountain King Seize the crown, raid the treasures,
avoid the monsters beneath the earth.

c Time Bound Educational historical game, ages 10
and up. Heavy plastic packaging.

**EPYX

c Alien Garden Bunch of little crystals that grow and
this critter eats them and if he eats
the wrong one, they blow up.

c Fun with Art Art construction software

c Jumpman Junior He leaps, he jumps, he leaps, he
jumps...get the idea?

c Monster Maze Get out of the maze - avoid the
monsters.

**Imagic

c Atlantis Missile Command under water.

c Demon Attack Space Invaders with flapping wings.

**Sirius

c Fantastic Voyage Weave your way through somebody's body
to get rid of their blood clot.
Yuck... Raquel Welch not included.

**Spinnaker (once again, nice but heavy premium plastic packaging)

c Adventure Creator Teachers your kids to make up their own
adventures. Ages 8+

c Fraction Fever Shouldn't 98.6 be 98 3/5 ?

c Story Machine Kind of a "mad lib" for your kids.

**TG Software

c Droids De-activate the robots before they
destroy your spaceship.

c Nightstrike Is this our fifth or sixth version of
"Missile Command".

**Thorn EMI (Once again, neat little BETA boxes)

c Kickback A soccer-like breakthru game.

c Jumbo Jet Pilot This game is HARD !! Take your seat in
the cockpit of a jumbo jet.

c Major League Hockey Ice hockey game.

c Orc Attack Save your castle from the nasty little
cretins!!

c Soccer Wish it had never been introduced in
the United States.

>Atari 800XL and 1050 Drive without using something like APE?

Simple. Run an Atari 8-bit emulator on your PC. Use the emulator to
access the XFD or ATR disk image. Also run Disk Communicator (or
scrunch or etc) on the emulator to make a .DCM file. Export the .DCM
file from it's image with one of the utilites made to do so under
MS-DOS. Now you have a .DCM file on your PC. Using modem or null
modem cable, transfer the .DCM file to your real Atari. Run Disk
Communicator on the real atari to turn the .DCM file into a real disk.

Cheers,

Jon

Uh, you don't have to reboot the machine to change virtual disks do
ya? It would be a distinct disadvantage if one could not change a
disk in a drive while still running the same software.

Just a note... a disk that is formatted to or written to with either
an Atari drive or PC 360K drive will never be able to be read in
either of those drives, any data that was written (or a format) to it
while in a 1.2MB drive.

The 1.2MB drive's read/write head is 1/2 the size of the head on 360K
drives.

Cheers,

Jon

As a follow-up, I'll note that I did finally get a good calibration,
by activating a large number of Windows programs to bog down my
machine, then running XLit in a Dos Window. For those who might be
interested, the resulting Joy.cfg file has these values:

116 550 116 550

Hmmm, that might explain a couple of the screwed-up third screens I
was getting - I figured it was just a ramdom hiccup.

BTW, I remember your name from waaaay back in the 8bit's heyday - it's
good to see some folks sticking with the Atari after all this time. :)

Speaking of menus, I did some, IMHO, fairly slick Basic programs way
back when, including a quite-nice Basic game loader and what I humbly
think was the best (and the first!) ATASCII animation program, but
currently have no way to get them onto PC images... :((And I really
haven't done any programming since then, despite dabbling with Action
and assembly...) I also did a full conversion of Cavelord from German
to English, but again, no way to get it to the PC.

Your cautions are well founded Tim,

And yes, this is all comming out of my pocket. I'm actually doing this more for myself then anyone else, however I would like everyone to take advantage of this product. Also, the answer is NO to any and all who want to ADVANCE PURCHASE, no orders are being taken, no donations are being taken. The only thing I am accepting is assistance with specific area's of design.

As for your question about PCB's. I have an in on that one, a friend who works at a manufacturer and my batch will be an after-hours run :)

Hi Alan,

Apparently most people are not familiar with B&C ATARI sales & service. They are one of two California based Atari retailers who purchased the remaining inventory of Atari 8-bit and Atari ST items (as well as Lynx, Jag and other Atari related items) B&C has more then sufficent quantities of Atari Antic, GTIA, Pokey, PIA, 6502c, Freddy and all other Atari related items (SIO cables) and so forth. This is where I've ordered my initial batch of equipment for development between myself and the 2 other people assisting me on this project.

By The Way, B&C's number is 408-986-9960, closed Sun & Mon for those looking for Atari products both new and used.

Alex,

It wont be VGA, but it will be RGBI. Bill Richerson who designed the original RGBI output for the Atari 800 has told me I have permission to use his design, he's also looking to see if he has an 800's lying around with the mod. It runs off the A103 chip in the 800, A20 in the XL/XE. Its an extremely simple mod, I don't understand why Atari never included it. All it took was a Motorola Quad 2N2222 and a 2n2907, a few resistors and a pot and some wiring and bingo: RGBI output to an Atari SC1224 color monitor. Now we plan on including an Omniview type 80 column text mode. We haven't tried it yet, but without the normal text bleeding, 80 columns on RGB should look great!!!

Things are happening. Still shooting for 1st quarter 1998 for release.

Anyone know what the big secret w/ the xformer cable is? I had
to search a long time w/ dejanews to find a pinout for it, but its
there.

The subject is 'Xformer Cable', posted by by 'rely@ix.netcom.com' on 7/17/96.
You should be able to find it at http://www.dejanews.com.

If Derek won't sell these simple cables anymore, I will sell them to anyone
who wants one for whatever he was asking. Might not be such
a great idea, since from all the dejanews articles I read it appears
they dont work well anyway.

Absolutely right !
These cables are 1:1 connections of the SIO to the parallel-port.
The advantage is that you can solder them quite easy. Anyway:
I built that cable (not for XFormer but I played around with
sources that I found) and it worked on my 486 but it failed on
most Pentiums (no, it's no timing issue). I think that the
"electrical" implementation of the parallel-port of those
mainboards is the reason.
Anyway doing 19200 Baud via the parallel-port is a stupid idea.
Any task-change in win95 will cause failures. Not to speak about
high-speed loaders that will work at 56000 Baud and higher.

Therefore I go for Steven J. Tucker's(your:-) APE-pro cable.
I'll also support it in XL-it!.

Bye,
Markus

Frank,
The last time I checked into WWW.EMULATORS.COM, which was a couple of weeks back, the page said the beginning of April. I just checked and now there is NO mention of Xformer 96 at all, anywhere on the page. Hmmm... Sounds like it's time for a massive write-in campaign to Darek. Thsi is no way to run a business. Personally, I like Xformer, but I was promised an upgrade to Win95 and I did what was requested to get it, now I want what I'm suppose to recieve. I'm now getting to ne not such a happy camper here!

That all depends on if it is one of the newer "supercarts", which use
"bank selection" to map more data into memory. If it is , then it's a
difficult task to find out exactly what it's doing.
Also, you either need to have some sort of built in "monitor" program
to allow access to your computers memory, or an Atari 800 machine
which has 2 cartridge slots- there is a BASIC program around which can
copy carts to disk using the second cart slot.

I could work on a "monitor" for you to try out, I remember seeing the
XL-FIX program will actually let you insert a cartridge while the
computer is on (for translating the XL O.S to the older 400/800, and
allow the cart to work). That is of course if you are using an XL/XE
machine. XL-FIX of course will not run on the 400/800 machine.
What I can do is insert the ROM image from the SuperMON O.S. I have in
my 130XE into XL-FIX, and then you will have a translator/MONITOR
which can load from disk, AND give you access to the memory after the
cart is installed..
If you would like to see some DOCs on SuperMON, I have posted them on
my home page. I personally could not live without SuperMON, I just
leave the computer with SuperMON on, as it is a built in translator,
and switch it off when something doesn't work..

Anway, let me know what you think of this idea..

Curt,
I like the idea, count me in! However, the idea of a hardware 130XE card would be even better. The card could use the PC's existing RAM, peripherals and ports, but would need Atari joystick, SIO and Cart ports via the card slots. What would you think of this instead or plus the stand alone version?

Glenn,

When you sum them together (as in the 2600 and 800) you get composite video. Composite is generated this way because you can control the Lum and Chroma better with discrete off silicon components. In 1978 it was difficult to fabricate LSI devices with fairly consistant resistor and capacitor values on the die itself. In order for the video to look the same on each console.....these components and functions were placed outside the chip.

My original point was that you will never get RGB out with 2 transistors added. And that Atari was not stupid for not doing it, it just is not possible!

jj

A while ago, somebody ranked the Atari computers in terms of which had the best keyboard. Is there a consensus best? Could someone repost that list, or else email me with their choice of which is the best. I've owned/used a 400,800,600xl,800xl,130xe, and of all those, I know its not the 130xe (too soft) or the 400 (what keyboard?). The 800 might have had too much resistance, so that would leave the 600xl and the 800xl. Which was the best?

Has anybody ever tried yanking the guts out of an 850 and replacing the
ROMs or whatever's necessary, with something that WON'T drop characters at
>2400 baud? Or is that essentially how the P:R: Connection et al were
invented in the first place? :-) (Actually, I'd have thought that if
ANYBODY were going to do such a thing (rip up an 850 and improve it), it
would've been Bob Puff himself. But he didn't, so maybe it's not
possible. Hardware hackers? Opinions?)

Of _course_ it would work. That's what modems _do_, period. I wonder why
you couldn't do it... if I'd been there that day I would've helped you
out...

>> Of course what's the point?
>> Why not just bypass the modems and connect the RS232 ports of the Atari

That works too, of course. Might not improve the dropped-characters-at-
9600-baud situation, although I've used a null-modem cable to transfer
files between the Atari 8-bit (with Atari 850) and my Amiga, at 9600 baud,
for YEARS and NEVER dropped a character...

I don't know whether things have changed today, but ten years ago I had a HELLLL of a time getting "Inside Atari DOS" from ANY source, INCLUDING this list -- went through at least three attempts to buy it from a couple of people, only to lose contact with them when they "never wrote back" to conclude the deal. Finally got a copy, but it was hard work! And I would have thought these things would have become RARER STILL after another ten years. Is that not the case?

I've done it a couple of dozen or so times, it just takes a LOT of practice, it took me about a year of playing regularly to achieve it. I still play it from time to time, but I'm out of practice so I don't tend to get the highest score anymore. You've just gotta be fast blowing up those Zylons, make sure you don't get hit, and don't dock unless you really have to.

>have had too much resistance, so that would leave the 600xl and the
>800xl. Which was the best?

Here is my opinion of best keyboards to worst, of all machines I've
laid my hands on:

800 or 1200XL (tie? I tend to favor the 1200XL slightly)
800XL & 600XL (same keyboards really)
130XE
400

Of course the best keybaord is a good quality IBM (other high end PC
style) keyboard with real switches used with the Transkey.

Cheers,

Jon

That would be perfect. You could then tack on a "protection map" of some form (yet to be defined) AFTER the disk-image data, and what _ought_ to happen is that software from today (the "pre-enhanced_ATR days") would simply ignore that "this is a protected disk" flag, and load only the portion of the file that it knew about, i.e. the disk image, and would IGNORE (never look for, and never see) the protection-map stuff. Newer software WOULD know to look, and WOULD see it, and could work properly.

It's called "backward compatibility." :-) And I LIKE it. :-)

>PC would be able to read the disks.

1) If anybody does get this to work, I want to know about it! (There could conceivably be SCSI-1 / SCSI-2 / SCSI-3 issues, though; I assume because of its vintage that the BB uses SCSI-1; anybody know what the Zip drive uses? I couldn't get one to work with my Amiga a year or so ago, but other people claim to have done so...)

2) Assuming you did get the Zip drive to work with the BB, the PC should have no problem reading the PHYSICAL MEDIA -- you'd just have to write an application that understood the DATA FORMAT (i.e. whatever DOS you had used on the Atari). I suppose it's just barely possible that there could be a signal-inversion issue (a la the MIO), but that seems like a rather remote possibility. I'd EXPECT it to work, and would be surprised if it didn't.

I too had the experience of recognizing 6502 code flowing across the
Terminator's vision in the theater. I was sharp-eyed enough to note that
the title "Super-Key" appeared at one point, and in a discussion here some
years later (now some years AGO) I believe someone said that it was
actually Apple code.

Maybe it'll become legible again if HDTV takes off...

Yup. You can trick the airplane into bombing where you're not, by laying
down a light barrage of minimal bomb-blasts in some area you're not
actively interested in. That will divert the plane from at least SOME of
its interference with your real task!

> And you gotta watch out for
>the lakes, if you bomb too close, they flood the whole area. And that
>puts a stop on all the fun, unless you can buy your way out.

Buy your way out? How's that? Do you mean, pick up enough $$ underground
to get more ammo and somehow SHOOT your way back out? Or is there a twist
to the game that I'm not aware of where you CAN "buy" your way out? (This
is what comes of inheriting people's disks but not their docs...)

>till you get sealed in a cavern of your own making,

Yeah... And after all the work it took to GET there! Figuring out
where to hover so that your bombs hit the ground at JUST the right
angle to dig a ramp down to the money, WITHOUT hitting a lake. Digging a
deep vertical pit where your ramp meets the surface, to suck up some of
the dirt the plane drops, so you DON'T get sealed in. Then getting sealed
in ANYWAY! AAAAAAAUUUUUUUUUGGGHHHHHH!

Incidentally, does *your* version of BB put up a big winged-eagle-shield
sort of banner graphic while loading?? My "file" version has the graphic
data for this embedded in it, but it never displays. One of my pet
projects for YEARS has been to try to restore that display...

Software is easy to write. Both the Vic-20 and Commodore 64, and I also
believe the Atari 8-bit (and even 5200 perhaps!) has built-in light pen
handling in the video chip. It could conceivably be written in BASIC.

I remember one light pen and light pen system I used that generated this
tiny patch of static around the area where the light pen touched the
screen when you moved it close enough. I seem to remember that it had no
button, you had to press START or something to get it to click. Was that
the function of a driver that sent a small player-missile deal after the
light pen signal, some hardware oddity caused by the particular TV, the
light pen's effect on the TV, or the video chip's reaction to the light
pen? This was for the Atari 8-bit and came with a disk full of programs
loaded by a menu, that seemed to be written mostly in BASIC.

You can 'buy your way out' by hitting the ALT key when running under
emulation on xlit. it subtracts some huge amount of money and restarts
the level. The higher the level the higher the cost. on a real atari I
think its the 'atari' symbol key.

Mine doesn't display the graphic. but now I know its there, I can play
around with it.

Atari often used keyboards from different suppliers in a given
model, so this question can be difficult to get consistent answers to.
But, I think the winner was the one model not on your list, the 1200XL.
Possibly in a toss-up with the 800.

2884. FS/t: Atari 1400Xl in case with power supply $350 OBO

Hello,

I have an Atari 1400XL in a true 14XX case. The anondixed label on it
says 1450XLD. It also has a true 1400XL power supply.

This unit is in 100% working order. I have used it and would rather have
a PowerBook so it it up for sale.

I am looking for $350 but am willing to consider offers and/or a straight
out trade for an Apple PowerBook.

Please send any and all inquiries offers to:

mbates@s3.sonnet.com
mbates@cs.uop.edu

Thanks

GREAT it works very well. Great to communicate with my ATARI :)

But ICE-T isn't so good while being online :(With 9600 Baud sudden
disappear charakter, won't be printed on screen. Is my Atari too slow? In
the documentation of ICE-T speaks the author of up to 19.2 baud with less
errors, but the highest baud rate is 9600 by me. And only under it without
any errors.

I have the following items up for trade or sale:

I am interested in NES, SNES, Jag, Genesis, Atari 2600, Atari 800, or Atari 7800 items. Thanks for reading!

For trade:

32X Star Trek: Starfleet Academy

Odyssey 2 carts:

Invaders from Hyperspace
Subchase/Armored Encounter
Blockout/Breakdown
Alien Invaders Plus
Thunderball
Speedway/Spinout/Crypto-Logic
Showdown in 2100 A.D.
Football

Commodore 64 carts:

Avenger
Clowns
Music Composer

Atari 800 carts:

Galaxian
Star Raiders
Pac-Man
Basic Programming
Centipede

For sale:

PAL 8-bit Nintendo system with over 40 games. The system is red (in color) and comes with both card and cartridge games. If you are interested, please email for more information. This system is a hard find. Again, please note that it is PAL and not NTSC.

My email address is: vtcam@ucdavis.edu

Markus, I completely agree with your point of view. I d like to have any kind of standard. Maybe STEVE (author of APE) could do anything like that:
I want to have only one standard of storing XL-Disks as files on any System.
Of course, ATR didn not care much about write protected disks., but maybe someone creating the neccesary Software (Yogi, Steve, Nick Kennedy, Markus ...) would do a specification dealing with all of these problems ...
This is the only way making sense for the future, I think .I..

```
Please forget XFD-files for future times. ATR is a step to right
direction, I think, but only a step ...

Matt
```

That's pretty bizarre, considering that the MAX232's main function is to
provide voltage levels closer to RS-232 standards. Perhaps people have
wired them up wrong.

(Note: you can also use the MAX233, which does not require external
capacitors. That's a nice chip.)

Well, since they are just virtual disks, why not just put the read
only attribute on the MSDOS file that stores the image? I realize
that doing something in MESSY DOS is external to the emulated Atari,
but then so is slapping on a real write protect sticker on a real
atari floppy used on a real Atari system.

>This is the only way making sense for the future, I think .l..
>
>Please forget XFD-files for future times. ATR is a step to right
>direction, I think, but only a step ...

By the way, I agree a header is the way to go. XFD is much inferior
to ATR. Could somebody please post the accurate detail on the make up
of those 16 bytes of ATR header? It would be nice to know what those
bytes are supposed to represent.

Cheers,

Jon

The last time it happened, one of the caps was shorted, and the chip
would get very hot. It cooked a Rana drive when it went, another
person reported a dead Indus, and another a dead 1050. I'm sure
the whole drive was not damaged, just the first input gate or something, I
never repaired the rana and its still sitting here.

I would assume it ended up putting a negative voltage across the data output,
since I cant imagine how else it could have happened.

Steve

>Thanks Matt

Well, here's the structure from it, taken out of ACE
(the Atari Computer Emulator)

struct sio2pc_image_hdr {
byte code_lo, code_hi; /* ID code = 0x0296 */
```

```
byte size_b1, size_b2; /* low 16-bits of size */
byte secsize_lo, secsize_hi; /* sectors size: 128/256 */
byte size_b3, size_b4; /* high 16-bits of size
(paragraphs) */
byte resv[6]; /* reserved */
byte numerr_hi, numerr_lo; /* number of sectors with errors
*/
};

struct errormap {
byte sec_lo, sec_hi; /* sector with error */
byte cstat; /* communication status */
byte hstat; /* hardware status */
byte resv[4]; /* reserved */
};

Note that the size (which is stored in size_b1 through size_b4)
is in paragraphs, or multiples of 16. Thus, take the total number
of sectors, multiply by the sector size, and divide by 16, then store
this result across those four bytes.
(Actually, I might have added bytes 3 and 4 to it.... or someone
else might have already. I can't remember now)

Note that the errormap was an extension I added, but I'd like
to see it get standardized, since they're useful for some disks.

Basically, the errormap sits at the end of the data, and 'numerr'
specifies the number of error records. Each one tells what
sector should give an error when reading it, along with the
codes that should be given for the error. The reserved part
could be used to add other information for really strange
errors. (but make sure you publish the extensions, if you
add any!)

I hope this helps some.

- Frank

------------------------------

Maybe, someone could add it to a FAQ - section.

Thanx, Matt

Please could you tell me, where to find a simple HIP-Viewer for the XL ?
I heard continiusly of HIP, but never got an Viewer for it.
Thanx in advance, Matt

Carina BBS the Best, Most Powerful BBS software for any 8bit computer!? I don't know where that came from, but the last time I saw Carina it was written in Basic and didn't impress me that much. (Granted it was an older version) But still BBS PRO! without a shadow of a doubt is the mos powerful 8bit BBS program in terms of baud rate, emulation support, networking, msg base processor and file processor, and online game support. What does Carina do that BBS PRO! can'T?

BTW you may think I own or run BBS PRO!.. no I actually was an 8bit sysop using OASIS 4.7 a few years ago.

I LOVED that games Yars Revenge on the Atari 2600 and I looked FORVER for an Atari 8bit port but never could find one. If you or ANYBODY else has a version of Yars Revenge for the 8bit please e-mail me!

Thanks

Alan

OK, who has sources to Atari Dos 2.0 and FMS? (already on disk!, ready
to be modified and assembled.)
I want to add more than 64 file name support to atari disks, and
greater than 720 sector for use with emulators and actual ataris via
ape.
I dont really want to type it all in from Inside Atari Dos but if I
have to I will.
Also, anyone know which manual the FMS source code is in?
Also, anyone willing to help with this type of project, post here!

yogi

>the medium difficulty.

I never played the 800 version enough to know if I could do it, but on the 5200 (identical game, different controllers) my brother and I got so where we got Star Commander Class 1 virtually every mission, and we ended up competing to see who could complete the game fastest and get that rank. My top time was Commander Mission in 6.9 minutes. I averaged about 20 seconds per sector!

The 5200 version might be considered slightly "easier" because the ship can turn marginally faster and you can thumb the controls while steering and firing...tough to do on the 800.

Bahahah! Yeah right! Do you honestly think Broderbund even HAS any 8bit disks lying around? I don't think so.

The lifetime replacement guarantee actually meant the profitability lifetime of the Atari 8bit. Which by my best estimates died in the late 80s or early 90s..

Message-ID: <Pine.GSO.3.95.970325220718.17043E-100000@fissure.scar>
Source record: 74516

On Mon, 24 Mar 1997, Asterisk wrote:

> Is there a way to get 80-column text on an Atari 130XE?

80 column text can be achieved in 2 basic ways. Via software or hardware.

Software tends to be cheaper, I have an 80 column word processor (I forget the name) unless you have a crisp monochrome monitor (or colour) the docs said monochrome looked better, it is VERY hard on the eyes. There are other software packages that emulate 80 columns, I think FlickerTerm is another. (don't quote me on that(

Hardware is the best choice. There is the ATARI XEP80, Atari's own 80 col hardware upgrade that plugs right in the SIO port (I think it used the same case as an SX212, those cheapo's at Atari!) YOu also can get an internal 80 col upgrade. But those are special OS hardware enhancements, Omniview, Ramrod, and others. Don't quote me on the names, it's been a long time since I dabbled in 8bit stuff, but this message base keeps me coming back.

I hope this helped...

2918. ATTN Alternate Reality Fans - Read This !

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-26 00:00:00 UTC
From: followell@mindspring.com
Message-ID: <33392e4c.1375025@news.mindspring.com>
Source record: 74518

There was some Alternate Reality news in the May issue of
Computer Games Strategy Plus magazine. It seems Monolith (I'm assuming
it's the same Monolith responsible for Blood) has plans to create
Alternate Reality Online, an internet based role-playing game. The two
original creators, Philip Price and Gary Gilbertson are online with
Monolith to head up the project. We were told to expect it sometime in
1998. Lets all keep our fingers crossed that this title lives up to
it's namesakes.

Sincerely,
- Byron Followell

So here again:
The 800 XE is J U S T the S A M E as an 130 XE, but without the second RAM-bank installed. I don't remember correctly, but think even the mainboard of the one I own is labeled "130 XE".

Matt

One question - I've posted this the third time in the last 1-2 month- aren't my messages readable to everyone ?

I have one of the rare 1400XL for sale. This unit works great! I have some software for the voice synthesizers as well as the internal modem.

It is in a true 1400XL case with a factory produced anondized (normal XL styling) 'name badge' on it which says 1450XLD!

Everything on it is in 100% working order
Keyboard (1200XL style)
Cart slot which is more accessible then the 1200XL one
Internal 300 baud modem works great!
Built-in voice synthesizer

The power supply is a true ATARI production model power supply and also works great!

I am looking for $300 - $350 on this (as this is what I paid for it all told) and I will pay shipping -OR-

I will trade this for a Powerbook 145 or 160 + some of my cash.

-OR-

Make me an offer!

Please send any and all inquiries to me at either

mbates@cs.uop.edu
mbates@s3.sonnet.com

Thanks

-Marlin

2923. Re: Star Raiders Tribute

wrote:

>
>Salesmen haven't changed much over the years, have they? :)

Well, in this case he was pretty smart, he knew when he had a product
that sold itself, why get in the way?

>
>For me, Pacman and Asteroids instilled in me respect for the machine
>as a major platform, but it was Star Raiders that made me a lifetime
>loyal fan. I remember sitting on a stool in front of a 25" TV, my
>body instinctively tilting as I tried desperately to dodge incoming
>torpedoes. Many a time when the action gets intense, I would tilt
>so much I actually fell off the stool. Good thing I was on carpet.
>Yes, the game literally blew me away.
>

Same thing used to happen to me. One time, I was hunched over in the
heat of battle and suddenly, a Zylon fighter swooped right over my
head from behind outta nowhere. I ducked so fast I actually hit my
head on the top of my 800! People today talk about the immersion
factor and being 'pulled in' by a game, hell Star Raiders had all
that before they even had a term for it.

>p.s. So where's this tribute gonna be at?

That's what I've been asking.

Source record: 74375

I have access to a bunch of Atari 800 computers...the cost of shipping is actually prohibitive, due to the weight of this machine..But what I can do is if you Determine what is wrong..can have you send me a Card from the computer..and test it out in a test module. If that is what is wrong I will send you a used working card back? Good idea/bad? Most cards from this computer will go shipping $3.00 plus the price of the card..so say I come up with a price of $8.00 a card shipped?...gives me $5.00 to check it out and send it back?

If the mother board is faulty..then we go from there.??Takes my time saves you shipping the whole thing// besides you have to tear it down not me...

Some things gone already, actually had to turn some foreign orders
down. Guess I should have let Algore smuggle some out of the
country to save postage... but was afraid money would have only
gotten to the DNC or the Clinton defence fund.

Will post this ad occasionally over next few weeks.
If you see anything you want, need, etc make an offer.

Buyer will be responsible for shipping charges.

Sales to contiguous US only. (Just cause somebody told me foreign
shipments are a pain!)

HAVE A BLESSED EASTER!!! CHRIST IS RISEN INDEED!!!

Atari Games for Sale

(All complete with boxes and documentation, unless otherwise noted)

Cassette Tapes
~~~~~~~~ ~~~~~
**AIM Software

t X-Ray Art construction game

**Atari Corp

t States and Capitals Program cassette ONLY, Instructions and
game on tape.

**Cosmi

t Aztec Challenge Seems to be "Mountain King" type game.

t Caverns of Khafka typical cavern-tomb danger graphics
game

t The Crypts of Plumbous A lot like "Defender", as I recall.

t Forbidden Forest Find your way out of a deadly graphic
forest

t Galactic Avenger "Space Invaders" type game

t Professor IQ Series of educational learning games

t Slinky You've played with the springs, now try
them on the screen!!
~~~~~~~~

t Spider Invasion Destroy deadly spider mutations, their
eggs and nest. Are you getting as
itchy as I am?

**Edu-ware Services

t Compu-read 3.0 Tool for improving reading speed and
comprehension. NOT boxed, but in it's
own folder including docs.

**EPYX

t Curse of Ra Expansion module for "Temple of Apshai"
adventure game. Book of Lore missing.

**Program Design, Inc.

t Addition with Carrying Math games for the young. In clear
plastic sleeve.

t Sam the Sea Serpent Sammy will devour your child if he
gives the wrong answer! (Just Kidding
!!). A story and game for your young
ones.

**Thorn EMI -- love their packaging....beta-like plastic containers
(and we all know where beta is)

t Compute 4 & Reversi Connect-4 game and "Go" type game

t Cribbage & Dominoes Cribbage & Dominoes...get the idea?

t Darts So safe, you can even throw them at
your Mother-in-Law

t European Scene Jigsaw Like those plastic toys where you
Puzzles Vol2 slide the tiles to get the picture
together.

t Figure Fun Two games to teach multiplication,
division, etc. Five levels, cover most
ages

t Owari & Bull and Cow Computer renditions of traditional folk
games

t Pool Everybody in the Pool !! No, not that
kind -- tournament and eight-ball,
practice included.

t Snooker & Billiards Pool with fewer balls and no numbers.

t Super Cubes and Slip Rubik's Cube and marble maze in
computer form.

5-1/4" diskettes
~~~~~~ ~~~~~~~~~
~~~~~~

**Activision

d Master of the Lamps Riddles of music memory and color,
album type packaging

**ALA

d Dragon's Hideaway Gather the Dragon's eggs...make a
medieval omelet??

**Atari

d Caverns of Mars Primitive Zaxxon in a Martian cave

**Atari Program Exchange

d Galahad and the Holy Grail Fairly well known adventure game, in
ziplock packaging.

d Seven Card Stud Monty Webb's poker game. Ziplock
packaging.

**Avalon Hill

d Divex Another darned "teach your kid" number
stuff... don't YOU ever sit down with
him??

**CBS Software

d Success With Math: Math for grade levels 5-8
Fractions

d Success with Math: Grade levels 7-11
Linear Equations

d Success with Math: Grade levels 9-12
Quadratic Equations

**CodeWriter (I found these VERY difficult to play because their
documents are too sketchy)

d Casebook of Hemlock Find out who murdered Lady Penelope
Soames #3 Wellington. Text adventure.

d Star Voyage 1/2 Electronic text adventure

d Star Voyage 3/4 If you haven't punished yourself
enough, finish the stupid thing.

**Cosmi

d The E Factor Save your planet against mimes, aliens
and asteroids!! Sorry, Marcel, oops,
that's "Mines"

**Crystalware

d Imperial Walker Idiotic robot elephant from Star Wars

**DataMost

d Ardy the Anteater With a tongue as slick as Willy's,
but not as forked, Ardy slurps them ants.

d Night Raiders Blow up the alien spaceships
again...don't they ever give up?

d The Tail of Beta Lyrae Lyrae is blow up the spaceships you
& Round About missed before, Round About .. blow up
strange shapes. Two games in one
ziplock.

**Datasoft

d The Sands of Egypt Graphic adventure ... still getting it
out of my boots.

**EPYX

d King Arthur's Heir Camelot adventure game. Has nothing to
do with Royal toupees.

d Temple of Apshai Base for other DUNJONQUEST games.
Includes both cassette version and
5 1/4" disk.

d Upper Reaches of Apshai Another expansion module for Temple of
Apshai. Book of Lore missing.

**Hayden Software

d Final Conflict Futuristic tank warfare game

**Infocom

d Four-in-one Infocom Sampler (DEMOS of text adventures)
If this needs description, go back to
APX, do not collect $200. Diskette in
sleeve ONLY.

**K-TEK

d Gorgon Rescue the Golden Fleece with Jason,
beware Medusa, beware this game... it's
Booorrrrriiiinnnggggg.

**KeyPunch Software

d Strategy Simulations Robot Patrol, Star Merchant, Civil War,
Convoy. Sure sounds like public domain
games to me ! In plastic sleeve.

**Learning Company

d Word Spinner Basic building blocks of reading, ages
6 - 10. In cardboard folder.

**Main Street Publishing

d Ardy the Aardvark Same game as above, repackaged in
ziplock.

**Penguin Software

d The Quest Fairly decent graphic adventure game

**Scholastic

d Agent USA Educational puzzle solving adventure
for ages 9 to adult. Nice, but heavy
packaging.

d Turtle Tracks LOGO-type graphics language program
for ages 9 to adults. Also nicely but
heavily packaged.

**Sierra Online

d Dark Crystal Roberta Williams' four disk graphics
adventure based on movie of the same
name... otherwise they might have
called it 'Casablanca'

**Sirius

d Blade of Blackpool Illustrated myth and magic graphics
adventure game.

d Fast Eddie Jumpman, Donkey Kong type arcade game.

d Wayout Colorful elaborate maze game. Still
has the CLOWN glasses !!

**Spinnaker (Heavy plastic box packaging...nice, but probably
expensive to mail !)

d Kinder Comp Collection of six educational games.
Boy, are your kids going to be smart !!

d Snooper Troops, Case #1 Kids detective game. Teaches problem
solving, deductive skills

d Snooper Troops, Case #2 Are your kids skilled yet? If not, try
this one too.

**Thorn EMI

d Home Financial Management If you buy all the above, this will
help tell you how much over budget you
are!!

**Walt Disney PC Software

d Mickey & the Great Outdoors If your kid can only learn from a
mouse, this is the one to do it.
More math and literacy skills.
By the way,
BOYCOTT DISNEY!!!

Cartridges

**Atari

c Centipede Zap the worm and all his parts. Arcade
game.

c E.T. Phone Home Help E.T. find the parts to make
his phone.

c Missile Command Save your cities from alien attack.

c Star Raiders Some more stupid spaceships!

**CBS Software

c Mountain King Seize the crown, raid the treasures,
avoid the monsters beneath the earth.

c Time Bound Educational historical game, ages 10
and up. Heavy plastic packaging.

**EPYX

c Fun with Art Art construction software

c Monster Maze Get out of the maze - avoid Donna
Shalala and Jocelyn Elders - no,
only some monsters.

**Imagic

c Atlantis Missile Command under water.

c Demon Attack Space Invaders with flapping wings.

**Spinnaker (once again, nice but heavy premium plastic packaging)

c Adventure Creator Teaches your kids to make up their own
adventures. Ages 8+

c Fraction Fever Shouldn't 98.6 be 98 3/5 ?

c Story Machine Kind of a "mad lib" for your kids.

**Thorn EMI (Once again, neat little BETA boxes)

c Kickback A soccer-like breakthru game.

c Jumbo Jet Pilot This game is HARD !! Take your seat in
the cockpit of a jumbo jet.

c Major League Hockey Ice hockey game.

c Soccer Wish it had never been introduced in
the United States.

I recall an 'early' issue of Analog featured the top ten games
of some of the Analog staff. Each was accompanied by a short
blurb. Lee Pappas (sp?) the editor at the time said something
to the effect of playing Commander level, with no shields.
Star Commander class I awarded.

No shields...

- Joel

Message-ID: <333B4AF5.72D0@tcd.net>
Source record: 74383

We all know shipping our product somewhere costs due to the Weight of the item shipped...What IF...Say you have a bad 1050 Disk drive..you ship me the bottom board unless it is not reading disks ect...bad alignment dirty head dirty tracks ect...I send you a tested board for say $10.00 plus shipping for the board..not over $4.00..we both win?

Atari 800XL's cost a bunch to send with power supplies ect..if your power supply is working why send it..tear the computer down to the main board..remove the shields ect..can fix them for $10.00 plus $4.00 s/h..

Same with the 130XE...if the keyboard works, power supply works remove it from the shield and same deal...$10.00 repair..$4.00 s/h..

Now the above applys to computers that have not been FRIED...all rams blown..all chips blown..normal repair..IF YOUR SYSTEM GOT HIT BY LIGHTNING THEN BUY A USED ONE!!!!

Me! :)

(That's using the original Atari joystick too, not any of those more expensive but inferior imitations. :)

The main key is to conserve energy as much as possible. That means keeping those shields off at all times, unless you're about to be hit!

I have some good ideas I think. I agree with whoever had the idea of
a defect map appended to the end of an .ATR file, with one of the
reserved bytes of the original 16 (or one bit of one of them) to
specify that there is or is not a defect map appended at the end of
the file. Then, for the defect map, simply have x number of bits for
each sector. These bits would identify the particular defect for each
sector. For example, say that there are 3 possible errors that a real
1050, 810, or XF551 would return. In that case, we need two bits in
the defect map for each sector of the disk. 00 would be no defect, 01
would be defect type 1, 10 would be defect type 2, & 11 would be
defect type 3. Each byte of defect map in this example obviously can
represent 4 sectors.

Okay, but now... before we get off too fast... since we are talking
about redoing a standard, shall we think about double sided media (is
that even needed in a virtual disk)? How about large volumes? Are
things like head and track important, or just worry about translated
sector numbers and sector size? Hmm... maybe that's getting a little
too complex for what we are trying to do here.

Cheers,

Jon

Right on. Rainbow is very cool.

As far as Xformer is concerned, Darek is a wanker. I'm surprised he hasn't
been sued for bad business practices yet. After getting Xformer I had a good
mind to sue him for alot of things, like misrepresentation of product.

I missed the start of this thread, what's the address of this page?

I have the Analog issue with the Doug Neubauer (correct spelling) interview (Oct. 86). In addition to the 3D explosions mentioned, here are a couple of other items he talked about:

He like the explosions best, the hyperwarp display he was never satisfied with (sure blew me away!).

He credits the lunchtime playtesting by Atari employees for greatly improving the game (yes, there was a time when beta testing really worked).

He wonders why in the later sequels to Star Raiders no one tried to model his sparkling photon graphic (I agree, even today, those photon balls are still a fantastic effect)

Since he was a hardware engineer for Atari, Star Raiders was something created basically on the side. Since he wasn't contracted to write the game, he didn't make a nickel from the huge success the game became (I think I'm going to send him some money, he deserves it)

And lastly, the most amazing thing to me was that Atari never approached him to do a sequel on the 8bit or to do the ST version. I mean, this guy writes a monster game that is light years ahead of anything imagined at the time, 'on the side' no less and they don't ask him (or pay him) to do anything else? No wonder they went down the tubes.

I believe that as great as the 8bit machines were, without Star Raiders they might never have gotten off the ground. What happened to me in 1981 I think happened to a lot of people. I went in to a computer store ready to buy an Apple, because that's the name I knew. Then I saw this moving starfield display and heard this incredible 'woosh' sound coming from this little computer in the back of the store. I asked the salesman what the hell it was and he told me it was a computer 'flying' game. He said "Watch this" and proceeded to demonstrate hyperwarp (this was his entire sales pitch). Well, after picking my jaw and eyeballs up off the floor, I walked out of there with an Atari. You could make a case and say the Doug Neubauer was probably the most influential person that Atari ever had.

Don't Fear's Huge Second Auction (Update 4)

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

APE already supports read only images, as well as read/write images
marked read only in the atr header. Images marked read only in msdos
are treated as write protected in APE as of 1.12.

>>This is the only way making sense for the future, I think .l..

> of those 16 bytes of ATR header? It would be nice to know what those
> bytes are supposed to represent.

There is the standard ATR header, and the APE ATR header which uses some of the
extended bits of the standard ATR. APE ATR images are backward compatible
since extra functions are in the 'unused' bytes.

The 'standard' nickatari ATR is: (first byte listed as 1, not 0)

01: NICKATARI Signature
02: "
03: Paragraphs, low
04: Paragraphs, high
05: Sector Size, low
06: Sector Size, high
07: Extended paragraphs
08..16: Unused

Current APE changes to the ATR header:

8 : 32bit Authentication CRC
9 : 32bit Authentication CRC
10: 32bit Authentication CRC
11: 32bit Authentication CRC

16: Bit 0: Write Protect
Bit 1: Sealed/Authenticated A
Bit 2..7: Unused

ATR Authentication info is available at http://www.nacs.net/~classics.

It was tough on the 800 if you used the Atari joystick which needed two hands to use. When I bought a Wico Command Stick (anyone remember those?) I was able to rest in on the desk next to the computer. I would steer and shoot with one hand, while the other hand rested on the the T (Target computer), H (Hyperspace), and M (Manual target selector) keys. Trivial stuff with todays joysticks but heh, this was 1981, and we were pioneering the HOKAS (Hands on Keyboard and Stick) technique.. Toggling the T and M keys while flying made it very effective to locate and target the nearest threats quickly. When I got a Zylon in front of me, I would turn off T so the computer woudn't suddenly switch to a guy in back of me (the dreaded front-rear attack). As soon as I blew the Zylon away, I would toggle T on and hit M to see who was next and where he was coming from.

Once I mastered this method, Star Commander Class One was easily attainable.

However, the one thing I have never achieved was something I read in Analog. One of the editors (Lee Pappas I think) mentioned that his greatest achievement was completing a Commander Level of Star Raiders with no shields used the entire game. I have tried to do this on many occasions, but never been able to make it all the way through without getting blown up or plowing into an asteroid. I guess you could call

this the Jedi Master Level of the game.

Salesmen haven't changed much over the years, have they? :)

For me, Pacman and Asteroids instilled in me respect for the machine
as a major platform, but it was Star Raiders that made me a lifetime
loyal fan. I remember sitting on a stool in front of a 25" TV, my
body instinctively tilting as I tried desperately to dodge incoming
torpedoes. Many a time when the action gets intense, I would tilt
so much I actually fell off the stool. Good thing I was on carpet.
Yes, the game literally blew me away.

No, think it will not work properly:
first you cant deal with such protection as double sectors ... Some
games use that and put different information into the sectors. So where
to store these additional information.
So rather a map, only listing the sectors are defekt and what defekt
they have. So it's more dynamical ...

But whats the matter with these PRO-images. I wont do double work and if
its a real good implementation, why not taking it ?

Matt

I could never get the hang of aftview pointing, so I do what undoubtedly thousands of other people do, turn the joystick backwards. I still get a kick out of the silliness of it all.

On that note, was anyone bothered by the reversed left/right sense between frontview and aftview? An enemy passing on screen-left would emerge (incorrectly) at screen-left after you switch the view. Maybe the warp field distorts the space around your ship? :)

OK, who has sources to Atari Dos 2.0 and FMS? (already on disk!, ready
to be modified and assembled.)
I want to add more than 64 file name support to atari disks, and
greater than 720 sector for use with emulators and actual ataris via
ape.
I dont really want to type it all in from Inside Atari Dos but if I
have to I will.
Also, anyone know which manual the FMS source code is in?
Also, anyone willing to help with this type of project, post here!

The source code to Mydos is out there somewhere, probably on umich.edu.
I might even have a copy somewhere if it can't be found online. As I'm sure
you know, it already supports subdirectories and disks with up to
65535 sectors. It just has that limit of 64 files per directory.

Simple: It's so to say a "trademark" of Steven Tucker.
This means that he doesn't give away the full specs.

I don't blame him for that ! He probably spent a lot of time
in inventing this format.

Bye,
Markus

2951. [ANN] XA 6502 crossassembler for reloc. binaries

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-27 00:00:00 UTC
From: fachat@physik.tu-chemnitz.de
Message-ID: <5hdivi$skb@narses.hrz.tu-chemnitz.de>
Source record: 74467
Cross-posted to: comp.sys.cbm,comp.sys.atari.8bit,comp.sys.apple2.programmer,comp.arch.embedded

I have a new version of my relocating 6502 cross assembler and the
relocation fileformat.
New are an align opcode, that aligns a current segment to a given
byte address boundary. Also you can now use segments in absolute mode,too.
This way you can use the same code base for relative and absolute
programs, and you don't have to handle the variable space yourself.

The new version is on its homepage:
http://www.tu-chemnitz.de/~fachat/xa

Below is the original announcement.

hope it helps
Andre

relocatable binary file format o65
& 6502 cross assembler xa65

This is the announcement for the 6502 relocatable binary file format 'o65'.

This format allows to

- relocate (i.e. move to a different address) a file when loading it, to
be able to execute at a different address

- produce global label lists, i.e. being able to export labels from one
file to another

- have undefined references, i.e. allow late binding (resolving symbols
at load time)

- code sharing in virtual memory architectures

- do block oriented transfer and have minimum side storage when loading a file

The format works for the 6502 and for the 65816 CPU. It knows object from
executable files and more.
The file format itself is free (I can do the clearance, if you have
suggestions for extensions etc.)
Have a look at: http://www.tu-chemnitz.de/~fachat/c64/xa/fileformat.txt

About another 6502 file format, see note 1).

6502 cross assembler xa65

As reference assembler to produce this kind of code, I have implemented
the file format in my 6502 cross assembler "xa65".
From version 2.1.1 it supports the new file format standard, and from

version 2.1.2a (i.e. current), it comes with the "file65", "reloc65" and
"ld65" utilities to print information about a file, relocate a file
and link several object files together resp.
The all programs are close to production stage (you never know if you
got all bugs...), while the linker is in beta stage. Esp. I want to know
about options you would like to have.

The assembler is under GNU public license and can be found at:
http://www.tu-chemnitz.de/~fachat/c64/xa/index.html

Other changes from earlier versions:

- supports o65 file format, including linker, relocator and file utility.

- much better code quality (only two warnings with
gcc -W -Wall -pedantic -ansi)

- supports more MASM pseudo opcodes (but still not the important ones
that I have my C-like preprocessor for: .if, .macro, .include.
This might change someday...

General description:

- C-like Preprocessor to make macros
- label "hiding" on different levels,
i.e. multiple use of the same label possible
- 1.5-pass assembler:
Everything that can be derefenced is being assembled in pass 1 and
saved in memory. The second pass does the rest. This (together
with hashing etc) gives quite a good speed (30kByte binary out of
300kByte source in less than two minutes on an 8MHz Atari ST -
hey, the first versions would have taken half an hour for this
job! - my 486DX4/100 with linux needs around two seconds or so...)
- needs no linker - all stuff is in source code (with this speed,
it's ok)
- (optional) support for relocatable 'o65' file format,
including linker, relocator and file utility. A loader in 6502
assembly code is also included.
- reads DOS and Unix(tm) files (LF or CR+LF)

so long
Andr&#65533; Fachat

---
1) There is already another relocatable object file format, called "OMF",
which is mostly used in the Apple community. I didn't take this format
for my projects for several reasons: It has some limits on filename
lengths; the relocation information is encoded between assembler code,
i.e. one cannot easily use block loading; it doesn't provide different
segments (as I can see) that have this meaning.
The OMF file format has never been published on the internet and mostly
commercial companies from the Apple world seem to support it - but then
they even have C compilers for this file format.

http://www.software602.com

602proINTERNET is a communication software package for full connection to
the Internet using dial-up or leased line. If you are a small business
owner
or an IS manager in a small to medium sized company, you have just found
the
software you need. 602proINTERNET allows a number of computers to access
the
Internet through one account. The product includes SMTP/MIME e-mail with
clients for Windows 3.1x, Windows95 and WEB clients for Windows 3.1x and
Windows95. 32-bits Mail602 INTERNET Server provides fast, high-quality
delivery of your messages. Firewall SOCKS solves the security of your
network. 602proINTERNET offers the possibility of using online access to
the
Internet for all users in your network simultaneously for the price of
connecting a single PC.

What can 602proINTERNET do?

"SURF" the NET from any workstation on the network!
The user of each workstation on the network has access to WWW pages of any
WEB site on the Internet. All users on the network can "surf" on the
Internet simultaneously.

Electronic mail for each network user!
602proINTERNET includes SMTP/MIME e-mail with the option to send and
receive
attached files for any user on the network, regardless whether he is using
Windows 3.1x or Windows95. E-mail has many ways of administrating the
users'
rights. Every user of your network has his own Internet address (i.e.
"user@yourcompany.com").

Security!
Our firewall SOCKS solves the security of your network against access
byunauthorized personnel. At the same time you may define access to WWW to
selected users on your network. Security is solved directly at the IP
packet
level and this is why it is reliable.

Only one IP address is all that you need!
You save your money! Your full connection to the Internet using
602proINTERNET requires only one IP address for the whole network. You will

connect your whole network to the Internet for the price of connecting a
single computer.

Available for Dial-up and leased line connections, too!
The software package 602proINTERNET is great for Dial-up as well as for
leased line connections. No more expensive telephone lines!

From: ambrosia@flash.net
Message-ID: <5hekjs$1ro$1@excalibur.flash.net>
Source record: 74471

I am attempting to collect as many of the old "Atascii Movies" (remember them?) as I can find, and put them at my web site for download.

If you have any, or are just curious, visit:
The "Break Movie" Warehouse.
http://www.flash.net/~ambrosia/index2.html

This whole thread brings up a point I made on alt.folklore.computers. The point was you can't find any cheap hobbist computers like they made in the 80s [at least new, with any support] I am not about to dedicate this $1000.00 plus computer I am writing on, to a hobby project.

I think a low cost computer like an Atari, TRS-80 color computer, Apple II would have a market tdoay among the electronics hobby crowd. [O.K., you can always find plenty of old 286s, but they tend to be nonstandard, used, and missing documentation, software and such]

In the 80s the electronic magazines ran various projects [heart monitors, weather stations, satellite image decoders] around the 1980s micocomputers. I got a TRS Color Computer for about $160.00 with the idea of possibily using it as a satellite image decoder.

It seems like the market for an under $200.00 computer would be there?

IMPORTANT NOTICE!

ALL NWPAC / NYBBLES & BYTES
MEMBERS AND SUBSCRIBERS!

APRIL 2, 1997

By this time,you may have received a letter from a Mr. Dale Wooster concerning the status of the NWPAC organization (also known as PAC or the Phoenix Atari Connection). Please note that Mr. Wooster is neither an officer nor a member of NWPAC. Any and all actions executed by Mr. Wooster have not been approved by anyone conected to NWPAC/PAC and should be considered to be a hostile action against NWPAC/PAC.

Please ignore his letter as it is full of misinformation, false facts and half-truths. If you receive any funds from him, please note that the money was taken from our bank account ILLEGALLY! Mr. Wooster was never given the authority to withdraw the money. Any monies given to me for producing the newsletter and for maintaining the NWPAC web site were approved by the current officers and were given to me by the NWPAC treasurer.

If you wish to help us out, send us the money he sent you (not the check) and we will credit you with an 18 month subscription to our Nybbles & Bytes newsletter (which by the way, HAS been published 5 times since this time last year, contrary to Mr. Wooster's assertions!) Maybe Mr. Wooster hasn't received any newsletters since he hasn't subscribed to it and is no longer a member of the club!

Full details on this matter will be provided upon your request.

John Collins
NWPAC Officer
Nybbles & Bytes Editor

Yeah! I've been known to complete the game with dead shields, just because I'd rather risk death than limp to a starbase. Hell, practically the only things that would send me back to base were a) photons destroyed and b) radio destroyed. I'd limp along with every other kind of damage. In fact, I even figured out how to hyperwarp into adjoining sectors without using the map!

2967. FS: Atari Computer Goods! Some Shown! FREE Catalogs!

Newsgroup: comp.sys.atari.8bit

Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I

will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

> that a POTGO poke will throw VCOUNT off permanently which sounds
> unlikely as well.
>

From the research I have done I am pretty sure that VCOUNT does get reset by a poke to POTGO, a number of books mention this and it seems to be true from experimentaion. The purpose of it being reset is that the scanline count is used to indicate the current position of the paddle controls. When the timing capacitor on the paddle port discharges, the current scanline count is loaded into the paddle register, so to get accurate values you have to be able to reset the scanline count.

I am also pretty sure that VCOUNT gets reset automatically at the begining of every frame so this would prevent VCOUNT form getting trown off permenently.

I think it is important to think of VCOUNT as a counter, it does not actually control which scanline is being drawn. Every time a scanline is drawn the VCOUNT 'counter' is incremented by one. It is actually keeping track of 'how many' scanlines have been drawn and not 'which' scanline is being draw. It is a subtle but important difference.

These are just my assumptions on how VCOUNT works, but I have implemented them in my Atari 5200 emulator and they seem to work ok.

2972. Re: Counterfeit Prototypes (Was Re: New? 8 Bit Carts)

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-28 00:00:00 UTC
From: krieg@miller.cs.uwm.edu
Message-ID: <5hgnee$1ks@uwm.edu>
Source record: 74400
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.classic

I had a nice long talk with B&C yesterday. Here are the highlights from our discussion on Atari 8-bit carts.

1) B&C burns copies of prototypes title, and prints labels for them.

2) B&C sells their copies to the public *AND* to Video 61 and Best Electronics.

3) Other titles that B&C have but haven't got around to burning copies for yet include:
Commando
MidiMaze (this sounds cool as you should be able to network with ST MidiMaze players)
Xenophobe
RealSports Soccer

4) B&C has a standing deal with John Hardie to give him first pick of anything new that comes in.

5) B&C obtained a couple of uncompiled sources for 2 Atari 8-bit games tenatively titled "Puffer" and "Jungle River Cruise". I believe John is in possession of these now.

6) B&C also have some chips that I believe can only be installed in XEGS machines. They are multi-game chips which would replace the built-in game chip on the XEGS.

I think we can look forward to at least a few more new 8-bit titles in the months to come.

================================================================================
= Cartridge List for the Classic Atari 800/XL/XE Computers =
================================================================================
= Rev. 2.5 March 28th, 1997 =
= =
= Author: Andrew Krieg krieg@execpc.com =
= =
= This list is also available via the WWW at: =
= http://www.execpc.com/~krieg/VidGames.htm =
================================================================================
= Welcome to the Classic Atari Computers Cartridge List! This list is based =
= on a list originally started by Kevin Chase. Many personalized versions of =
= Kevin's list started to pop-up, so I have attempted to consolidate every =
= bit of data I could find into one list. I hope you find it useful! =
================================================================================
= Key =
= ------ =
= NR = Never released =
= ?xx = Year of release not known for certain. =
= kbo = Keyboard overlay was included with cartridge. =
= kp = Works with a Koala pad device. =
= lp = Works with a lightpen device. =
= ppt = Requires Chalkboard Inc.'s Powerpad Tablet device. =
= rso = This is a right slot only cart, exclusively for 800 computers. =
= CPS = Consumer Products Service, a division of Atari.
= * = This cart only runs on 400 and 800 model computers. =
= 2 = This cart requires 2 joysticks to play. =
= + = This cart was released more than once in different cart cases. =
= <none> = No catalog # for this cart =
= [C] = Checklist for cartridge ownership =
= [I] = Checklist for instructions ownership =
= [B] = Checklist for original box ownership =
= =
= To reuse the checklists, use your favorite editor and replace all of the =
= string patterns "[x]" with "[ ]". You have to calculate your own ownership =
= and ratio values as well. =
================================================================================
= The rarity ratings are still undergoing fine tuning. I would appreciate =
= any feedback on them. It should be noted that common carts for the Atari =
= computers are harder to find than common 2600 carts. They would probably =
= rank as uncommon or rare on the VGR 2600 list. =
= =
= Rarity =
```

```
= ------ =
= C Common These carts can be found fairly easily at thrift =
= stores, in sale posts on the 'Net, or in Atari =
= computer vendor catalogs (yes there still are some =
= vendors!). =
= U Uncommon A little harder to find, but they pop up on the 'Net =
= infrequently. =
= R Rare Very elusive to find carts. Some vendors still have =
= them in stock, but they are generally more expensive. =
= ER Extremely These are very, very hard to find. They usually have =
= Rare had a very low production run. Consider yourself =
= very lucky to come across one! =
= PR Prototype Never formally released. At one time, these were only=
= available as pre-release carts. Now, several vendors =
= are burning new copies of these prototype games. Not =
= as rare as they sound anymore. =
================================================================================
= Total = 357 carts Own = 194 carts Ratio = 54% =
================================================================================

changes...
->
->thx, 4 hints.
-
What a great game it is. I still have a saved game where I'm at level
20! And I still have not yet figured out how to get any further.
Anyway, each module that you recieve has it's own specific use, and
it's own specific power usage (or output). Your task is to find the
best of each type of modules. This does get pretty tricky to work out,
because these modules also work in COLOUR bands. For example, say you
pick up a module that is a SHIELD, and the monitor screen on the top
right shows a band of colours with RED showing the most. This means
that if you get hit by a lazer blast that is RED you will recieve
minimal damage. When you get the robot on the mother ship to check
these modules out, he gives you the EFFICIENCY and POWER ratings. Lets
say the power rating of the shield is 20 and its efficiency is10, you
would be better off finding one that is better balanced. A shield that
is 15 power 15 efficient would work better, but be less powerful? (I
know this is wierd, but thats the design :) I certainly would not use
one that is 50 power 10 efficient, because it uses too much power to
be 10 efficient.
There are modules that activate the other monitor screens. There are
modules that increase your speed. There are modules that change the
RADAR to only detect the type of module it is. You just have to try
them out and see what happens. Some of them might not work because you
don't have enough power output to start them, so keep a lookout for
GENERATOR modules. You will also find BATTERY modules, but these need
a GENERATOR to keep them charged up. Once you have these two in
operation, you will be able to use the higher rated shields and guns,
and the guns will not take so long to recharge after firing them.
(that is if you can fire them at all, power permitting) .
Beware of Space ships that EAT the REPO ROBOT!! You'll have to go
back to the mother ship to get another one :)
The way I got to level 20, SAVE THE GAME after picking up each
module. It's a real pain, but after getting killed over and over I
decided this is the best way.
Oh, the modules seem to work better the more you have of the same

"make". For example, the shield and gun that you start with work well together. This is because they were both made by the same "race". So check the symbols that are on each one that you find and try to use the same "race" built ones.

I had a great time getting thru this game, I just wish I knew how to finish it off :(. At level 20, there is a ship on my radar, but I cannot get to it. I have tried climbing all over the mountains, with a super speed module which is apparently supposed to get me over hills etc, but as I say, I cannot get to it....

Good luck..

I don't know what interface you're using but my setup with an MIO had no problems at 9600. It's at 19,200 that it starts dropping chunks of characters. One thing you might want to check is that you have the setting "Status Calls" set to "Constantly". He mentions this in the manual and for anything but a true 850, is very important for high speed.

I still want 19,200 though... I need to find out why it doesn't work properly.

Good Luck.

Not just as a hobbyist computer either...

How much computing power do you need to do word processing? or a spreadsheet? or play games? games on 8-bit computers are still fun...

And Look at schools: They don't have a lot of money and yet they are constantly buying $2000 to $2500 macs and Pc's to keep up, even though they realy don't need it. Anm 8-bit computer is fine for, say, teaching someone BASIC. Apple IIgs's are perfect for this, but all the schools in this county at least put their old apple II's in warehouse where they just Sit there and go out and buy more expensive computers.

I think if they came out with a new computer, based around the 16-bit version of the 6502, with good graphics, a gui, and a cli OS, sort of linke an updated Commodore 128, or Atari 130XE, (or an Apple IIgs with just better screen resolution and a hard drive!) people would buy it.

That's one of the reasons there's all this talk about network computers, but I think it should be more of a general-purpose computer. And of course if they integrated a Java VM into the OS, software wouldn't be a problem in the future...

BTW, I think if Atari had made a set top box for browsing the web, maybe as an add-on to their Jaguar, like the few that have come out now, they could have made a LOT of money and re-established themselves in the computer/video game market.

You can already get on the Internet on your Apple II.. get ProTERM, or any
other communications program ("terminal software"), and a modem.

Then call up to a shell account and you can read news, use the web, or
any other Internet activities.

Don't Fear's Huge Second Auction (Update 6)

Part 1: 2600/5200/7800

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

This is definitely true. My first computer was an 800XL my dad bought.
It had a great keyboard. Later we bought second used 800XL from a friend
of his, and it had a very inferior keyboard (it has a ton of friction).
The general fit and finish of this second 800XL was much worse, too, which
leads me to suspect that Atari was trying to cheapen up production.

You misunderstood my point.

As I related, I've had experience with sending somebody advance money on a
product that was not yet in production, the Fast Technology TinyTurbo030
accelerator for STs. And it is my opinion that Jim Allen (the guy behind
Fast Technologies) had every intention of delivering what he had
advertised.

But good intentions don't ship complex electronic products. To the best
of my knowledge, the TinyTurbo030 never did ship. I was stuck with having
paid $350 (I think) in advance on a product that did not exist. Month
after month of attempting to call Jim Allen got more and more stories
about various problems with testing and production. I eventually got Mr.
Allen to send me a Turbo25 as an interim measure (25 MHz 68000 instead of
50 MHz 68030). At that point I gave up on the 030 board and considered
myself lucky to have gotten at least some kind of an accelerator, even if
it wasn't a good value at the price.

I am relieved to hear that Mr. Vendel is not asking for advance money. In
fact, that makes me *more* confident that he has a chance of bringing it
to fruition. If this kind of project is to succeed, it needs to be
something that does not require much funding for development and
production, because of the extremely low volume of sales. I can easily
see something good coming out of donated after-hours time and so forth.

I'm not sure if I really think it's worthwhile (it doesn't seem to offer
significant advantage over existing XL/XE hardware and hacks, and it seems
likely that one real Atari will have to be cannibalized to make each
Cvendel Atari-clone), but if there are people interested that's great.

You can buy new 386 machines for a couple hundred bucks (including HD and
monochrome monitor), and I think this is what is used by the vast majority
of the hobby crowd. Especially since development tools for embedded
microprocessors, EPROM programmers, and similar devices are most cheaply
and easily available for the PC.

Try http://zippy.sonoma.edu/kendrick/star-raiders/

It's part of Bill Kendrick's Atari site. It's been up since last year. Given the lively discussion this has generated, it will be interesting to see what he does with it. Apparently, I'm not the only person who bought an Atari after seeing a demo of Star Raiders. It has been said every popular computer has had a "killer app" that that made people want to buy that particular computer. The Apple II had VisiCalc; the IBM PC had Lotus 1-2-3. Star Raiders was it on the Atari 8-bit. I wonder if Atari ever realized it.

I believe the proper title is "Mar Tesoro", the filename was "mtesoro.bas". It
was
advertised in an early Antic (the first issue? Kevin Savetz has my earliest
Antics right now.)

Graphically very sub-par, but my brother, friends and cousins found it totally
engrossing for days at a time.

I've always wanted to find an original disk, or at least a copy of the
instructions.

If anyone has either, I will pay!!

Not bad. I never got anywhere in the game, but I still thought it was cool.
I think I still have my "terrain printer" that will print out maps of the
levels (can't get it though, because I don't have an Atari). The mountains
in one level said "LFL" when looked at from above. Another one said
something else, which I forgot.

> I had a great time getting thru this game, I just wish I knew how to

I still have an old computer magazine from that time, where one of the
programmers talks about hints to the game. Maybe I can dig it up...

Bye,
Thomas

I just checked it out, I don't know if anyone has told Bill (he didn't leave an email address) but he's spelling Doug's last name wrong, should be Neubauer. The page looks promising for Star Raiders fans, I see he's putting up the whole manual. A nice addition would be a section where people can post their tips and experiences with the game.

I don't think Atari really understood the games impact, because they never followed up on it. After SR, they went the 2600 route with 8 bit versions of Asteroids, Missile Command and Defender. Star Raiders should have served notice that the 400/800's were capable of more than just arcade conversions. Atari just didn't get it.

Don't Fear's Huge Second Auction (Update 5)

Part 2: Everything Else

Alright kids here we go!

Rules:
1. Send all bids to WQQT56A@prodigy.com do not post bids to newsgroup.
2. Please include an alias (if you desire confidentiality) with each bid.

3. Bidding:
$1.00 - $20.00 -------> $0.50
$20.00 - $50.00 ------> $1.00
$50.00 - $100.00+ ----> $3.00
4. Buyouts may be accepted.
5. We will not be accepting any trades at this time.
6. Preferred methods of payment: Cash, Money Order, or Cashier's Check
all in U.S. funds. If you choose to send a personal check please allow 2-
3 weeks for the check to clear.
7. Shipping will be calculated as follows:
-by weight and materials, to be totaled after confirmation of final
bids.
-any international orders will be slighty more.
8. Cartridges are all loose unless noted otherwise.
9. Email me for any questions on any auction item.
10. We reserve the right to withdraw any item at any time.
11. The auction will enter the G1, G2, Sold phase on April 14.
Once an item has reached the G2 stage, only those on the update list may
bid.
12. Last but not least: Don't Fear The Reaper! Enjoy the auction!

ATTN YOGI

Hello the Yogi! I am an old-time 8-bitter and have recently put my board
back up at 704-253-4786. I have a large collection of floppies for the 8-bit (450+)
but also have most of them plus thousand of files on Spartados Hard Disk
partitions which I am moving to the PC using my SIO@pc interface. My first attempt
at mass distribution of over 500 files in this format is in prograss at this moment.
The data is being sent to: Ftp.hackersz.com/atari/incoming.

Again, the file:

Hard_two

is a direct image of my Games partition in sio2pc3.0 format.

The Atari 16meg partition contained within is a 65534 sector long, double-density
spartados 2.x format partition.

If you have any suggestions on a better method of distribution which would
not be overly labor intensive, I would appreciate the advice.

Give my board a call or leave me E-mail

Jeff@uptime-csi.com

Cheez Daddy's House of Funk BBS
300-19.2kbaud
24hours
Carina II v2.5 software on an 576k 130xe and Basic XL
560megs online
150 megs actually in use!! ;-) Big drives make 8-bit warez look teeny.

Everyone may write with questions about the Atari, peripherals, software requests,
fixes, hacks, cheats, or a need to copy an 'uncopyable' disk - I have a Super-
Archiver II with Bitwriter 1050 whcih will do the trick though I read the APE
is getting there. I doubt it can do an analog bitcopy like the Bitwriter ;-)
I also have a fairly large archiver of reair and upgrade information for all Atari
8-bit machines, a small archiver of Atascii movies I would like to enlarge....
Also, I am missing disk 4 of Ultima IV and could use a discomm file to complete
my ultima collection....

Anyone out there with an ATR8000 who needs a CP/M boot disk, a terminal boot,
or an MSDOS disk for your nifty Copower88, I can mail them to you.

Send a self-addressed, stamped disk envelope with your request for any floppy
media to:

Jeffrey S. Worley
C/O
Uptime Computer Service Inc.
#2 Westwood Place
Asheville, NC
28806

Remember to include specifics on disk format. Single/double density, number of sides, what operating system (CPM, MSDOS, SPartados, Mydos) etc.

>dpatekar @ica.net

There is a file we used to use to hack carts. First, you have to get the file

Look for a program called Carcopy or cartcopy.exe

You first boot dos, then run this program, then, with the power on and everything you insert your cart. The 8-bit crashes 99 times out of 100 because it monitors the status of the cartridge port constantly. Then you read the contents of the cart into ram and dump the image to a file, run an editor, change the run vectors and you are set. You can rig a switch to the status line on the cart port to make this method more reliable, or get an e-prom burner from css and read them that way.

From: Jacob Schenk <0schenk01@flnet.nl>
Message-ID: <01bc3c54$e784f0e0$91bc97c2@asus>
Source record: 74332

Hi!

I recently bought a Atari 600 XL with a 1050 diskdrive.
It didn't come with a manual.
When I hook up the set with the diskdrive, the 600 XL starts to beep and
the on the screen the message "boot error" keeps coming. Without the drive
it works fine.

I suppose I'm doing something wrong (or the drive is broken...:-( ).

Can anybody enlighten me?

Thanks!

Jacob

Someone posted this a while back, it may help you out...

KORONIS RIFT - Operations Manual

24 Febrius, 2249.

For three days your Scoutcraft has been travelling through empty space, on its way from one foresaken part of the galaxy to another. You're a technoscavenger, making a living searching for abandoned technological systems - but for all the luck you've had in the last month you might as well be an intergalactic drifter. Psytek, your science droid analyzer, is monitoring the instruments. There isn't much to do - not much, that is, until suddenly Psytek flashes an urgent message:

POWERFUL RADIATION FLUX
DETECTED:
COORDINATES 45:90 RELATIVE
AZIMUTH AND ELEVATION
Powerful is right! Your instruments indicate rads in the ten thousand range. "Any idea what it might be?" you ask.

NEGATIVE. CHARTS INDICATE
EMPTY SPACE FROM HERE TO STAR
SYSTEM 583
Strange. And stranger still, when you deploy the Scoutcraft's optical sensor, you discover a large, solitary planet - one that simply doesn't exist according to the charts. But there it is, it's surface cut with deep chasms and ancient rifts.
You call up a dimensional coordinate grid of the radiation flux. Sure enough, the lines of the grid are ruler straight until they reach the area of the radiation flux. There, they become as warped and tangled as the wiring of your third-hand Scoutcraft.
A powerful radiation flux...a planet cut with deep rifts...

Suddenly a wild idea occurs to you. Have you stumbled upon the legendary Koronis Rift?
Seven hundred thousand years ago, the Ancients ruled the stars - a confederation of over thirty different races whose technological achievements were unsurpassed. According to legend, the Ancients used the deep rifts of a planet called Koronis as a testing ground for their most powerful weapons. Finding the fabled Koronis Rift has been a dream of technoscavengers for centuries. Now, just maybe, you're the one....
As soon as your ship moves within range, you activate your on-board detector. Tuned to the Ancient's standard wavelength, it should tell you whether this mysterious planet contains any caches of powerful technology.
Instantly, the detector registers the loudest alarm you've ever heard. Koronis Rift...it must be!
You signal Psytek. "Prepare the Surface Rover for descent."
Using the optical sensor, you snap an orbital photograph of a section of the planet's surface. A moment later Psytek announces:

SURFACE ROVER READY FOR DESCENT.
"What about the Repo-Tech Robot?" you ask.

RT ROBOT EQUIPPED AND ON BOARD.
The Scoutcraft, with Psytek in control, will orbit while you explore the planet in your Surface Rover. You can always summon Psytek to come pick you up at any time - as long as you're in the clear and not under attack.
There's no time to lose. Koronis Rift, the greatest treasure trove of technology in the galaxy, is waiting....

QUICK START

1. Launch Scoutcraft
Once your disk boots up, you'll find yourself inside the Surface Rover, ready to explore the planet Koronis. To start scavenging, press the fire button on your joystick.
2. Koronis Rift
The planet Koronis is cut by deep valleys, called rifts, which are ringed by mountain ranges and sprinkled with hills. You land in Rift One which looks to be the least dangerous.
3. Hulks
The vehicle you see on the ground before you is just what you've been hoping to find - an abandoned hulk, a war machine of the Ancients.
4. Video Displays
Check out the video displays at the top of you're screen. To the far left, the circle with a glowing dot at the top is your directional display. The glowing dot points toward the nearest hulk, directly in front of you.
5. Search
To search the rest of Koronis Rift for Ancient technology, just turn your ship until the dot is at the top of the display, and then move

forward.
6. Drive
To turn on forward drive, just push the joystick forward. To turn off forward drive, pull it back. Push the joystick left or right to turn in those directions. Simple.
7. Guardian Saucers
Those are Guardian Saucers swooping in. They are out to destroy you. New waves will keep coming until you destroy their base on Rift 20. You've got only two choices - to evade, or to destroy them. To fight back, use your joystick to position your targeting cursor - the small cross hair that moves within the viewing window. With the cursor centered on an enemy saucer, push the button on the joystick. One hit may not be enough. After all, these Guardian saucers will stop at nothing to protect the hulks of Ancient technology. And that's exactly what you're after.
8. Looting Hulks
The radiation levels on Koronis are enough to fry a Dromodite. So you'll have to send your Repo-Tech Robot out to loot the hulks you find. But you can't do anything, until you've destroyed all the attacking saucers and positioned your Rover next to the hulk. Then you'll see the options "LOOT HULK" and "CALL SHIP" appear beneath your viewing window. To enter the option area, move the cursor to the bottom of the viewing window andpress the button. Move the cursor to the right until the indicator light above "LOOT HULK" comes on. To issue the command to your RT Robot, press the button on your joystick. The RT Robot will bring back any useful systems it finds in the hulk. To return to the Scoutcraft, activate the indicator light above "CALL SHIP" and press the button on your joystick.
9. Final Objective
Destroy the saucer base on Rift 20 by gradually increasing your capabilities on the earlier levels. You can end the game anytime by returning to your Scoutcraft to cash in on all the technology you've found, but you cannot claim the entire planet for yourself unless you destroy the Guardian Base.
10. Pause and Restart
Press the SPACE BAR to pause the game. Press it again to resume. To reset the game press ESC.

SYSTEM ICONS
The following lists standard military systems of the Ancients, along with symbols commonly used to identify them. Other types exist that have not yet been identified.

LASER - Chromoquantized laser, capable of emitting a beam of destructive energy in a single color frequency.
SHIELD - Chromoquantized shield, capable of defending against energy weapons of various colors.
GENERATOR - comprising stand power supply.
POWER RESERVE - a high capacity energy storage device.
RADAR - Remote sensing device, designed to locate a specific type or class of objects. May also serve as compass or direction finder.

ECM - Electronic countermeasure device, capable of interfering with enemy detection gear and rendering the user harder to detect.
DRIVE - Propulsion module, for augmenting or changing the ability of the Rover to move over terrain.

```
* **** ** ****** ** *
********** * * * * * * * *

* * ** * ** ** ** * ******* ******** ** * *
***** * * * ** * * * ***** ** ** **
******* **** ** ** ** ****** *** ** ** *
* **** * * * * **** *
POWER **
LASER SHIELD GENERATOR RESERVE RADAR ECM DRIVE
```

STRATEGY AND TACTICS

Add a new module to an empty slot by selecting the slot and hitting the fire button. Use the "Add Module" option only to replace existing modules.
Some strategies will score more points than others. For high points, either try to bring back lots of modules for dismantling, or try to gather enough powerful waepons quickly, then get to Rift 20 and destroy the Guardian base.
Most radar modules point only to hulks made by the same race. If you first figure out what kind of modules an Ancient race is good at, then you can use radars made by that race to tell you if and where you may find more of those modules. Save the radars of useful races with Psytek for use on later rifts.
Mapping the rifts will help you from game to game. Some modules will help you in making maps.
Pay careful attention to energy flow. Powerful modules may require more energy than you can afford. If you add stronger shields and lasers to your Rover, you'll need to get stronger generators and power reserves too.
Unusual modules may work only on certain colored saucers, or for limited amounts of time. Pay attention and experiment. You may find improved versions in later rifts.
Note the progression of colors in the saucer weapons and shields. Once you recognize the pattern, you can plan ahead by having the modules you'll need to defeat or evade the saucers coming up.
Differently shaped saucers have different attack patterns. Adapt your attacks to their patterns.
Cutting through passes and staying near mountains can throw saucers off their pursuit, particularly if you have a good generator and drive.

>

...At the time, I think Atari was trying to promote the 800 series as a "serious" computer, not a "games" machine... which explains the lack of really good games <other than SR> from Atari itself.. They had a reputation as a game company <not surprisingly>, and were trying to make the 800 come across as a "real" computer <which it was>....

of course they could have made more money marketing games...

Source record: 74338

Has anyone had any of the these actions happen when running the
following games on the latest version of XL-it 1.9 (which is damn
incredible).

[Mule] After the game sets up (and you finish choosing your character),
you, and the other characters are displayed with the starting
attributes, and the joystick button is no longer understood so you can't
go further?

[Return of Heracles] Everything appears fine, but after you choose
joystick - the music continues to play, but the game does not respond to
a joystick button press.

[Shamus] - main character moves around, and shoots (on previous XL-it,
it wouldn simply appear and die before even moving), but the Shamus
character and enemies start to break up and gun shots begin to dissapear
until the game becomes unplayable?

Just curious if there's something wrong on my side, or it's just that
these games not yet fully compatible with the latest version.

The emulator is truely wonderful. Thanks for any input from others
playing these titles.

- Joe

The IIGS is a different story. Once you are free from the shackles of
16-bit address busses and 4-color graphics then only speed becomes an
issue, not feasibility.

At least for this game (as it's one of my favourites) I can say
that it works fine with 0.19.
From what you write I get the impression that something with your
joystick-setup is wrong.
Please unplug your joystick and try it with the keyboard. If this
solves the problem then we have a problem ;-)

Let me hear what you can figure out...

Bye,
Markus

You need a boot disk.

When it comes to low cost high performance computing nothing beats the console Amigas. Amiga 500s are $100-150. They sport a multitasking OS and are more upgradable with a larger software base than any startup 65816 machine could hope for. For a few hundred more you can get 8-bit graphics and an 020 and OS 3.0 upgradable to a 50mhz 060.

The desktop Amigas are still overpriced but the console ones are cheap.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 800XE, 65XE, 130XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

But does any of htat really matter? Wouldn't the point of having a
TCP/IP stack for a computer be to have a standard connection to the
internet upon which any program would be written that could access the
internet? Command-line utilities would be fine for an 8-bit, especially
an FTP util to download programs off the many 8-bit archives easily.
graphical access isn't important...

True, but Amigas aren't officially supported anymore. Besides, there should be a platform that's deliberatley less powerful than the others, and very cheap at the same time. Too bad they don't make ST's anymmore. Those were cheap and powerful. The point is to have a cheap machine designed for certain tasks. You don't need a Pro 200 with 64 megs of ram to learn Basic, or to do Word processing, or even to browse the web. A cheap 16-bit computer similar to the IIgs, or even to an Amiga or ST, would be perfect for a school, or a small business. Even for home use. Unless you're planning on doing 3D rendering or something, it isn't really necessary to have so much power. Especially in Schools, who don't have a lot of money.

At my school, they have a DX4/100 with 8 megs of ram, a 820 meg hd, Quad speed CD-ROM, and a Color Inkjet Printer, they bought it for $2000 two years ago. It's being used to run a DOS-based database program that takes up about 2 megs of disk space. And the printer doesn't even work in DOS mode without a windows program running in the bacground! In the meantime, they have a multimedia CD runing off a 486/25 with 1 meg of ram and an external single speed CD-ROM drive, and there's an Apple IIgs sitting on a shelf, unused. See something wrong with this picture??

BTW, I know where I can get a brand new Amiga 600 for $150 :)

Several of the newer pc games require realtime 3d rendering; p-pro/200
justified.on another note, anyone remember way-out from sirius software?
I'd say it was one of the first doom-style games in 8-bit. except you had
no guns. But the premise was there, get the hell outa the maze.

Sparta Dos persay was not produced on a Cartridge. Sparta Dos X was produced on a Cartridge and perhaps this is what you are looking for? Only place to get it may be from CSS...Bob Puff or B&C..they bought inventory from FTE///(Mike Hohman)..

Now if your looking for Sparta Dos 3.2d on disk with manual..I have several of these Purchased From FTE...price ...$12.00 plus shipping which would be $3.00..

bob..

3020. Re: Counterfeit Prototypes (Was Re: New? 8 Bit Carts)

Newsgroup: comp.sys.atari.8bit

B&C is a reputable company. They would not just go out and Brun chips that are Coprighted by another company without negocating a deal with them.??? I may be wrong but I doubt it as the penalities for Copyright indfindment are greater than Bruce wants to take on!

Now you as Atari Users have 2 areas of collectables...suggest to Bruce that he in his Lable includes a number that he has produced...git the point...another collectable by number??? Maybe..?

bob

3021. Re: Thompson PROBURNER Auction 3/27/97

Newsgroup: comp.sys.atari.8bit
Date: 1997-03-29 00:00:00 UTC
From: BobKlaas <bobkla19@tcd.net>
Message-ID: <333DB976.5772@tcd.net>
Source record: 74350

I do not wish to dump on anyone but the Thompson Burner for the Atari
8-bit may be over rated here...I own one have had it since the 80's

If you run a 400 upgraded to 48k then it will function properly.
If you own a 800 48k it will function properly...

If you want to run it on a 600xl, 800xl, or 130xe, then some problems
crop up..I do not think they ever upgraded their product.

It does have nice editing features for chips 27128 and below...not
available with Puffs Burner...An IBM burner will do the same thing..

Puffs will do 27512 and above..some undesirable features..you see what
you get...IBM burners...you get what the software program says you will.

My suggestion to all is that if you have a specific project in mind then
research the item you wish to buy..ask questions...ask facts..This
groupe has resources that no other has and I am sure someone will steer
you in the right directon..

bob

3022. Re: atari reborn....possibly the phoenix?

Newsgroup: comp.sys.atari.8bit

But do you really need that? Personally, I find the newer 3D games boring as hell, mainly because they put too much empahsis on cool graphics and other bells and whistles, and the games aren't fun anymore. You get bored with them in 5 minutes. In the meantime, I can play Civilization, which has relatively crappy graphics, for five hours straight.

Hey, did you know there is a web page devoted to ATASCII movies?
Check out "Break Movie" Warehouse at http://www.flash.net/~ambrosia/
A guy named Tom D'Ambrosio put it up a while back.
